Preface	XIII
Classification of explosives	1
Literature	3
CHAPTER I. NITRATION AND NITRATING AGENTS	
General information	4
Nitric acid	6
Nitric acid in admixture with other mineral acids	9
Earlier works	9
More recent studies	14
Application of kinetic studies to elucidate the structure of nitrating mixtures	33
Conclusions	47
Literature	49
CHAPTER II. NITRATION THEORIES	
Nitration as an addition reaction	53
Nitration as a double exchange reaction	60
Orientation of nitro groups	63
Side reactions in the nitration process	74
Literature	78
CHAPTER III. NITRATION AGENTS AND METHODS MORE RARELY USED	
Nitration of alkenes and alkynes with concentrated nitric acid	81
Nitration with dilute nitric acid	83
Electrolytic nitration	86
Nitration with nitric acid vapour	86
Nitrogen dioxide	90
Nitration with nitrogen dioxide alone	92
Nitration with nitrogen dioxide in the presence of sulphuric acid	102
Nitration with nitrogen dioxide in the presence of Friedel-Crafts catalysts	103
Nitration with nitrogen dioxide in the presence of activated silica	105
Photonitration with nitrogen dioxide	105
Nitrogen pentoxide (nitric anhydride)	105
Nitryl chloride (nitronium chloride. NO₂Cl)	107
Nitryl fluoride (nitronium fluoride. NO₂F)	109
Nitrogen trioxide (nitrous anhydride)	109
Nitric acid in the presence of mercuric nitrate	110
Nitrating mixtures with strong oxidizing agents	115

Nitrous acid as a nitrating catalyst and as a nitrating agent	116
Nitrous acid in the presence of hydrogen peroxide	120
Organic compounds as nitrating agents	122
Nitric acid esters	122
Acyl nitrates (mixed anhydrides)	123
Nitrates of some organic bases	124
Aliphatic nitro compounds	124
Nitration under influence of gamma radiation	126
Indirect methods of introducing a nitro group	126
Substitution of sulphonic groups	126
Substitution of halogen	127
Other nitration reactions by substitution	129
Introducing the nitro group by oxidation	131
Literature	133

CHAPTER IV. NITRATION **WITH** NITRATING MIXTURES

Nitrating mixtures	139
Composition of nitrating mixtures	139
Utilization of spent acid	142
Enthalpy of nitrating mixtures	146
Heats of dilution	149
Mixing the acids	150
Temperature of nitration	151
Mixing of reagents during nitration	152
Solubility of nitro compounds	153
Design of nitrators	155
Heat exchange devices	156
Stirrers	156
Product separation and discharge of the nitrator	159
Waste water.	161
Literature	164

CHAPTER V. GENERAL INFORMATION ON NITRO COMPOUNDS

Constitution of the nitro group.	165
Visible and ultra-violet absorption spectra.	168
Infra-red absorption spectra	175
Nuclear magnetic resonance and X-ray examination of nitro compounds.	179
Chemical properties of nitro compounds.	181
Primary, secondary and tertiary compounds.	181
Heterocyclic nitro compounds	187
Nitro compounds as explosives	188
Literature	189

CHAPTER VI. AROMATIC NITRO COMPOUNDS

Reactivity of the nitro group	192
Influence of nitro groups on reactivity of hydrogen atoms and substituents. Nucleophilic reactions	197
Free radical reactions	212
Inhibiting action of nitro compounds on polymerization	214
Vulcanization of rubber with aromatic nitro compounds	216

Influence of nitro groups on some physico-chemical properties of phenols and amines . . .	217
Behaviour of nitro compounds in concentrated acids	218
Addition compounds of aromatic polynitro compounds	220
Other reactions of nitro compounds.	225
Literature	225

CHAPTER VII. NITRO DERIVATIVES OF BENZENE

Nitrobenzene	230
Physical properties	230
Chemical properties.	231
Toxicity of nitrobenzene.	231
Preparation of nitrobenzene	232
Dinitrobenzenes	233
Physical properties	234
Chemical properties.	236
Toxicity of dinitrobenzene	240
Explosive properties of dinitrobenzene	242
Preparation of dinitrobenzene	242
Trinitrobenzenes	248
Physical properties of sym-trinitrobenzene.	249
Chemical properties of sym-trinitrobenzene	249
Explosive properties of sym-trinitrobenzene	253
Preparation of sym-trinitrobenzene	254
Preparation of unsymmetrical isomers of trinitrobenzene	256
Tetranitrobenzenes.	257
Hexanitrobenzene	259
Thermochemical properties of nitro derivatives of benzene.	259
Literature	262

CHAPTER VIII. NITRO DERIVATIVES OF TOLUENE

Nitration of toluene	265
Mononitrotoluenes.	268
Physical properties	268
Thermochemical properties.	269
Chemical properties.	269
Toxicity	270
Preparation of mononitrotoluenes	271
Industrial methods of nitration of toluene.	275
Separation of isomers	277
Dinitrotoluenes	281
Physical properties	282
Thermochemical properties	282
Chemical properties.	283
Toxicity	284
Preparation of dinitrotoluenes	285
Industrial methods of preparation of dinitrotoluene	288
Preparation of pure isomers	289
a-Trinitrotoluene (TNT)	290
Physical properties	291
Thermochemical properties.	299

Chemical properties	300
Elucidation of the constitution of <i>a</i> -trinitrotoluene.	311
Kinetics of the nitration of dinitrotoluene to trinitrotoluene	312
Explosive properties of TNT.	318
Toxicity of <i>a</i> -trinitrotoluene	322
Metabolism of trinitrotoluene	325
Unsymmetrical isomers of trinitrotoluene	326
Physical properties	327
Thermochemical properties	327
Chemical properties	329
Preparation and constitution of unsymmetrical trinitrotoluenes	336
Other by-products in the nitration of toluene	337
Tetranitrotoluene	339
Literature	340

CHAPTER IX. TNT MANUFACTURE

Toluene.	345
Nitration of toluene to TNT	347
General remarks	347
Three stage process for manufacture of TNT.	347
Old French process.	348
Old British method	351
Old U. S. S. R. method (according to Gorst)	354
German method	357
Two-stage manufacture of TNT (old Italian method)	363
Material balance	364
Continuous methods of nitration	365
Earlier methods	365
Modern methods	366
Purification of TNT	376
Purification by crystallization	377
Sulphitation and drying of TNT	379
Schematic diagram of a plant for continuous TNT manufacture	386
Utilization and neutralizing sulphitation liquors.	389
Waste waters	390
Safety in TNT manufacture.	391
Literature	393

CHAPTER X. NITRO DERIVATIVES OF HIGHER BENZENE HOMOLOGUES

Nitro derivatives of xylenes.	395
Isomers of mononitro- <i>m</i> -xylene (MNX)	397
Isomers of dinitro- <i>m</i> -xylene (DNX).	398
Isomers of trinitro-<i>m</i>-xylene (TNX).	398
Mononitro derivatives of <i>o</i> - and <i>p</i> -xylenes	402
Dinitro derivatives of <i>o</i> - and <i>p</i> -xylenes	402
Trinitro derivatives of <i>o</i> - and <i>p</i> -xylenes	402
Manufacture of trinitroxylene (TNX)	404
Nitro derivatives of other homologues of benzene	413
Nitro derivatives of mesitylene	413
Nitro derivatives of ethylbenzene.	414

Nitro-solvent-naphtha	415
Hexanitrostilbene	415
Nitro derivatives of diphenyl	416
Nitration of mixtures	417
Nitro derivatives of polymers	417
Nitropolystyrene	418
Literature	420

CHAPTER XI. NITRO DERIVATIVES OF NAPHTHALENE

General information	422
Mononitro derivatives of naphthalene	426
Dinitro derivatives of naphthalene	427
Physical properties	428
Composition of the commercial product	429
Chemical properties	430
Trinitro derivatives of naphthalene	431
Chemical properties of trinitronaphthalene isomers	432
Structure of α - and γ -isomers	433
Explosive properties and application of trinitronaphthalene	434
Tetranitro derivatives of naphthalene	434
Structure of tetranitronaphthalenes	435
Thermochemical properties of nitronaphthalenes	436
Side reactions in the nitration of naphthalene	437
Manufacture of nitro derivatives of naphthalene	438
Nitration of naphthalene to mononitronaphthalene	438
Nitration of naphthalene to dinitronaphthalene	442
Nitration of nitronaphthalene to dinitronaphthalene	443
Nitration of nitronaphthalene to trinitronaphthalene	445
2-Methyl-1-nitronaphthalene	446
Literature	447

CHAPTER XII. NITRO DERIVATIVES OF HALOGENOBENZENES

Nitro derivatives of chlorobenzene	450
Mononitro derivatives of chlorobenzene	450
Dinitro derivatives of chlorobenzene	452
Manufacture of <i>o</i> - and <i>p</i> -chloronitrobenzenes	456
Nitration of <i>p</i> -chloronitrobenzene to 1-chloro-2,4-dinitrobenzene	458
Nitration of chlorobenzene to chlorodinitrobenzene (Griesheim method)	458
Trinitro derivatives of chlorobenzene	459
Thermochemical and explosive properties of chloronitrobenzenes	466
Nitro derivatives of <i>p</i> -dichlorobenzene	466
2,4,6-Trinitro derivative of 1,3,5-trichlorobenzene	469
Nitro derivatives of fluorobenzene	470
Literature	470

CHAPTER XIII. NITRO DERIVATIVES OF PHENOL

General information	472
Mononitro derivatives of phenol	474

Dinitro derivatives of phenol	475
Physical properties	476
Chemical properties.	476
Toxicity of dinitrophenols	478
Principles of preparation of nitrophenols	479
Manufacture of dinitrophenol by direct nitration	481
Manufacture of dinitrophenol by chlorodinitrobenzene hydrolysis	484
Picric acid	486
Physical properties	486
Thermochemical properties.	490
Chemical properties.	491
Explosive properties.	494
Toxicity	495
Literature	496

CHAPTER XIV. MANUFACTURE OF PICRIC ACID

Principles of manufacture.	499
Nitration of phenol.	499
Nitration of dinitrophenol	503
Method based on phenol nitration	504
Nitration methods using dilute nitric acid or mixtures of nitric acid and sodium nitrate	504
Continuous nitration of phenolsulphonic acid	512
Nitration with concentrated acid	514
Dinitrophenol nitration methods	519
Methods of nitrating benzene in the presence of mercuric salts	520
Literature	522

CHAPTER XV. **OTHER** NITRO DERIVATIVES OF PHENOLS

Picric acid isomers.	524
"Isopicric acid"	524
Picric acid salts	525
Ammonium picrate	527
Guanidine picrate	530
Danger produced by picrates	530
Tetra- and penta-nitro derivatives of phenol	530
Tetranitrophenol	530
Pentanitrophenol	531
Nitro derivatives of resol	532
2,4,6-Trinitro-<i>m</i>-resol	532
Manufacture of trinitro-<i>m</i>-resol	534
Nitro derivatives of arylphenols	535
Nitro derivatives of 3-hydroxydiphenyl	535
Nitro derivatives of polyhydric phenols	535
Dinitroresorcinol	536
Trinitroresorcinol (styphnic acid)	538
Trinitrophloroglucinol	542
Dinitropyrocatechol	542
Literature	543

CHAPTER XVI. PICRIC ACID ETHERS

Trinitroanisole	545
Chemical properties.	545
Toxicity	546
Explosive properties.	546
Manufacture of trinitroanisole	548
Tetranitroanisole	547
Trinitrophenetole.	548
Polynitro derivatives of diphenyl ether.	549
Pentanitrodiphenyl ether.	549
Hexanitrodiphenyl ether	550
Nitro derivatives of various phenolic ethers	551
Hexanitrodiphenyl sulphide	553
Hexanitrodiphenyl sulphone.	554
Literature	554

CHAPTER XVII. NITRO DERIVATIVES OF ANILINE

Mononitro derivatives of aniline	556
Dinitro derivatives of aniline	557
Trinitroaniline (picramide)	558
Chemical properties.	559
Tetranitroaniline	560
Pentanitroaniline	562
Hexanitrodiphenylamine (Hexyl).	562
Physical properties	563
Chemical properties.	563
Explosive properties.	564
Hexyl manufacture.	565
Nitro derivatives of carbazole	566
Tetranitrocarbazole	567
Manufacture of 1,3,6,8-tetranitrocarbazole	568
Preparation of 1,2,6,8-tetranitrocarbazole	569
Amide derivatives of trinitroanilines	569
Hexanitrodiphenylurea.	569
Hexanitro-oxanilide	570
Hexanitrodiphenylguanidine	571
Nitro derivatives of aminophenols.	571
Trinitro-<i>m</i>-phenylenediamine	571
Picramic acid.	571
Nitro derivatives of phenothiazine.	572
Literature	572

CHAPTER XVIII. NITRO DERIVATIVES OF AZO- AND HYDRAZO-BENZENES

Hexanitroazobenzene.	574
Hexanitrohydrazobenzene ,	575
Nitro derivatives of azoxybenzene.	575
Mononitro derivatives.	575
Dinitro derivatives	576
Trinitro derivatives	576

Tetranitro derivatives	576
Literature	578

CHAPTER XIX. ALIPHATIC NITRO COMPOUNDS

Nitromethane	579
Physical properties	580
Stability	581
Ignition and burning	581
Explosive properties.	584
Dinitromethane	587
Trinitromethane (Nitroform)	587
Tetranitromethane	588
Physical properties	588
Chemical properties	589
Explosive properties.	590
Toxicity	593
Preparation	593
1,2-Dinitroethane	594
1,1-Dinitroethane	595
Polynitroethylene	596
sym-Tetranitroethane	596
Hexanitroethane	596
2,2-Dinitropropane.	597
Other polynitro aliphatic compounds	598
Nitroaromatic derivatives of mono. di- and tri-nitromethane	598
Literature	599

CHAPTER XX. NITRONITROSO AND NITROSO COMPOUNDS

Dinitrodinitrosobenzene	602
Hexanitrosobenzene	603
Literature	604
Author index	605
Subject index	623
