

CONTENTS

Introduction

Novel information on explosive properties	1
Calculation of detonation properties	2
Sensitivity of explosives to impact	11
Action of ultrasonic waves and laser pulse	16
Action of irradiation	16
Influence of high temperature	17
Increasing the strength of explosives by adding metals	17
References	18

Chapter 1. Nitration and nitrating agents

Nitric acid	21
Nitric and sulphuric acid	24
Effectsof adding salts on nitration in sulphuric acid	25
Nitric acid and trifluoromethane sulphonic acid	25
Nitric acid and hydrofluoric acid	26
Nitric acid and phosphoric acid	26
Nitric acid and acetic anhydride	26
Nitric acid with cerium ammonium nitrate or tallium nitrate	27
Nitronium cation (NO₂⁺) and its salts	27
Dinitrogen pentoxide	29
Dinitrogen tetroxide and nitrogen dioxide	31
Dinitrogen tetroxide, nitric acid	33
Friedel-Crafts nitrating agents	35
Solid superacid catalysts	35
Alkyl nitrates and boron trifluoride	36
Nitric acid and mercury salts	36
Inorganic nitrate salts and trifluoroacetic acid	37
Nitrous acid	37
Nitrosyl chloride	39
Nitrate esters in alkaline medium	39
Aliphatic nitro compounds	41
Nitroamines	42
References	42

Chapter 2. Nitration of aromatic systems

Influence of substituents on nitration	48
Ips0-nitration	50
Aromatic radical cation	55
Reversibility of aromatic nitration	55

Nitration under the influence of gamma radiation	57
Indirect methods of introducing a nitro group	58
Substitution of sulphonic group	58
Substitution of diazo group	59
Substitution of halogen	59
Substitution of t-butyl group	59
Introducing the nitro group by oxidation	60
Oxidation of primary amino group	60
Oxidation of oximes	60
Diffusion control in nitration	61
Influence of a positively charged substituent	63
Side reactions	63
References	64

Chapter 3. Structures and physico-chemical properties of nitro compounds 68

Electronic spectra of the nitro groups	69
Solvent effect	73
Infra-red and raman spectroscopy	74
Nuclear magnetic resonance of nitro compounds	77
Proton magnetic resonance	77
Nitrogen magnetic resonance	78
Electron spin resonance	80
Micro-wave spectroscopy	80
Magnetic and electric birefringance	80
Optical rotatory dispersion	81
Hydrogen bond with the nitro groups	81
Charge-transfer complexes (CT-complexes) or electron-donor-acceptor complexes (EDA-Complexes)	83
X-Ray structure	87
Thermochemistry	88
Mass spectrography	88
Electrochemical Properties	90
Galvanic cells	90
Biological activity of nitro compounds	90
References	91

Chapter 4. Reactivity of aromatic nitro compounds 96

Substitution (heterolytic and homolytic)	96
Electrophilic substitution	97
Nucleophilic addition and substitution	97
Nucleophilic displacement of nitro groups	98
Jackson–Meisenheimer reaction and complexes	98
Practical significance and application of Jackson–Meisenheimer reaction	101
Reaction potential map (RPM)	102
Mycellar nucleophilic reactions	102
Janovsky reaction	103
Action of bases in nucleophilic reactions of nitro compounds	104
Action of Grignard reagent on nitro compounds	107
Reaction of aromatic nitro compounds with diazomethane	109

Mechanism of Richter reaction	109
Nucleophilic substitution in gas phase	110
Reactions of radical ions	110
Radical anions of nitro compounds	110
Free radical reactions	112
Action of aromatic nitro compounds on polymerization	115
Reduction of aromatic nitro compounds	115
Formation of nitroso compounds	115
Reduction of aromatic ring	116
Diazotization of amino nitro compounds	118
1,3-Cycloaddition of nitro compounds	119
Thermal stability of aromatic nitro compounds	120
Free radicals	121
Furoxanes	122
References	122

Chapter 5. Photochemistry of nitro compounds 129

Aliphatic and alicyclic nitro compounds	132
Photoconductivity of nitro compounds	133
Photolysis	134
References	135

Chapter 6. Nitro derivatives of benzene, toluene and other aromatics 138

Nitration of benzene to nitrobenzene	138
Nitrobenzene	139
m-Dinitrobenzene	139
Electrochemical properties	140
Isomeric dinitrobenzenes	140
sym-Trinitrobenzene	140
1,2,3,5-Tetranitrobenzene	141
1,2,4,5-Tetranitrobenzene	142
1,2,3,4-Tetranitrobenzene	142
Pentanitrobenzene	142
Hexanitrobenzene (HNB)	143
Other high nitrated derivatives of benzene obtained by the method of Nielsen	143
Nitro derivatives of toluene	144
Nitration of toluene to nitrotoluenes	144
Mononitrotoluenes	145
Industrial methods of mono-nitration of benzene and toluene	145
Removal of phenolic by-products	146
Periodic nitration	146
Continuous nitration	146
Soviet method (according to Chekalin, Passet and Ioffe)	147
Bofors-Nobel-Chematur method of nitrating benzene and toluene to mononitro products	150
Dinitrotoluenes	151
Physical (including thermochemical and explosive) properties	152
Formation of dinitrotoluenes from mononitrotoluenes	153
Industrial methods of dinitration of benzene and toluene	154
Modernized pilot-plant and industrial production of DNT	154
Low temperature nitration of toluene to DNT	154
Bofors-Nobel-Chematur method of manufacture of DNT	156

Biazzi S.A., Vevey continuous method	157
Trinitrotoluene	160
Physical (including thermochemical and explosive) properties	160
Chemical properties of 2,4,6-trinitrotoluene	164
Reaction with sodium sulphite	164
Oxidation of 2,4,6-trinitrotoluene	165
Reduction of 2,4,6-trinitrotoluene	165
Methylation of 2,4,6-trinitrotoluene	166
Unsymmetrical isomers of trinitrotoluene and by-products of nitration of toluene	166
Tetranitromethane	168
White compound	169
Impurities of TNT	171
Sulphitation of crude TNT ('sellite' process)	172
By-products formed in the course of purification of TNT with sodium sulphite	173
Utilization of dinitrosulphonic acids formed in sellite process	173
Pentanitrotoluene	175
TNT Manufacture	176
Bofors-Chematur continuous method	177
Low temperature process for TNT manufacture	178
Manufacture of TNT in the U.S.A. during World War II	181
One-stage Nitration of toluene	181
Two-stage process of nitration	182
Three-stage process	182
Direct nitration process	182
Purification of crude TNT	185
Soda-ash process	186
Ammoniacal sellite process	186
Alkaline sellite method	187
Safety of manufacture and handling of aromatic nitro compounds, particularly of benzene and toluene	187
Environmental problems of TNT manufacture	190
Other nitroaromatics	190
Nitro derivatives of hydrocarbons	190
Nitro derivatives of halogenohydrocarbons	191
Nitrophenols	191
Picric acid	191
Salts of picric acid	192
2,4-Dinitroresorcinol	192
Purification	193
Styphnic acid	193
Tetranitrodian	193
Picric acid ethers	194
Hexanitrodiphenylamine (hexyl)	195
Picramic acid	195
Other aromatic nitro compounds with amino groups	195
References	195
Appendix 1	199
Derivatives of halogeno-benzene	199
Appendix 2	201
Analysis of nitrating acids	201
Appendix 3	201
 Chapter 7. Heat resistant explosives	 202
Nitro derivatives of benzene	203
Nitro derivatives of diphenyl	205

Nitro derivatives of bibenzyl and stilbene	206
Nitro derivatives of bibenzyl	206
Nitro derivatives of stilbene	208
Nitro derivatives of aromatic aza pentalenes	211
Nona	213
Potential heat resistant explosives	213
Resistance to irradiation	215
References	215
Appendix	217
 Chapter 8. Aliphatic nitro compounds	 218
Mononitro alkanes	218
Other methods of introducing the nitro group into saturated compounds	219
Oxidation of amines	220
Reaction of alkyl halides with sodium nitrite	220
Nitromercuration of alkenes	221
Formation of nitroalkanes from nitrate esters	221
Chemical properties of nitroalkanes	221
Nitronic acids	221
Polar solvents favour the aci-form	221
Activating influence of the nitro group	222
Nitromethane	224
Nitroethane, 1-nitropropane and 2-nitropropane	226
Arylnitroalkanes	226
Nitrocycloalkanes	228
Esters of nitroalcohol and unsaturated acids	229
Industrial methods of nitrating alkanes	229
German method of nitration of lower alkanes	230
Method of Commercial Solvents Corporation, Inc.	231
Distillation	233
Hazards of the nitration of alkanes	233
1,2-Dinitroethane	236
2,2-Dinitropropane	236
Nitroalkenes	236
Methods of preparation of nitroalkenes	236
Recent reactions of formation of nitroalkenes	238
Chemical properties of nitroalkenes	239
Addition reactions	240
Isomerization	240
Reduction of the double bond	241
Polymerization	241
Nitroacetylenes	242
Polynitro aliphatic compounds	242
Nitration of hydrocarbons	242
Substitution of halogen	243
Electrolytic methods	244
Addition reaction	244
Michael addition	244
Diels–Alder addition	245
Oxidative dimerization	245
a, w-Dinitroalkanes	245
gem-Dinitroalkanes	245
Trinitromethane (nitroform) derivatives	245
Properties of nitroform	246
Manufacture of nitroform	248

Tetranitromethane (TNM)	251
Physical and physico-chemical properties of TNM	251
Chemical properties	252
Nucleophilic substitution	253
Nitrosation of tertiary amines	253
gem-Dinitromethylation	253
Nitration	254
Radical reactions	255
Ionic polymerization	255
Metalorganic compounds	255
Explosive properties	255
Toxicity	256
Preparation of TNM	256
Hexanitroethane (HNE)	256
Nitrocarboxylic acids	257
Nitrodiazomethanes	258
Nitro derivatives of urea	259
<i>N,N</i> -bis(β,β,β)-trinitroethyl urea	259
Nitroso compounds	259
Nitro-nitroso alkanes ('Pseudonitroles')	259
'Hexanitrozobenzene'	260
Nitroenamines	260
References	261
Appendix	268
References	269

Chapter 9. Difluoroaminocompounds 270

Direct fluorination of non-aromatic compounds	270
Direct fluorination of NH_2 and NH groups in aliphatic compounds	271
Difluoroamine (difluorimide) NHF_2	271
Other non-aromatic difluoroamines	272
Fluorination of nitroaromatic amines	273
1-Difluoroamino-2,4-dinitrobenzene	273
Other difluoroamino nitroaromatics	275
Fluorination through the addition of tetrafluorohydrazine	275
Tetrafluorohydrazine $\text{NF}_2\text{--NF}_2$	275
Reactivity of tetrafluorohydrazine	276
Explosive properties of difluoroaminoalkanes and alkenes	277
Theoretical aspects of properties of NF_2 compounds	278
Thermochemistry	279
References	279

Chapter 10. Esters 281

Nitrate esters (O-nitro compounds)	281
Structure	281
Dipole moments	281
Spectroscopy	282
Nuclear magnetic resonance	284
Electron attracting properties of nitrate esters and charge-transfer complexes	284
Hydrolysis of nitrate esters	287
Reduction of nitrate esters	289
Conversion of nitrate esters into nitroalkanes	289

Formation of nitrate esters	289
Gas-chromatography of alkyl nitrates	292
Alkenes as a source of nitrate esters	292
Nitrate esters as explosives	293
Biological action of nitrate esters	295
Glycerol trinitrate (nitroglycerine)	295
Setting point	295
Vapour pressure	295
Absorption spectra	296
Chemical properties and stability	296
Sensitivity to impact	298
Burning of nitroglycerine	299
Explosion and Detonation of nitroglycerine	299
Glycerol dinitrates ('dinitroglycerine') and derivatives	300
Glycerol-nitrolactate dinitrate	300
Glycerol 2,4-dinitrophenylether and trinitrophenylether dinitrates	301
Hexanitrodiphenylglycerol mononitrate	301
Mixed esters of glycerol	302
Glycol nitrates	302
Ethylene glycol mononitrate	302
Ethylene glycol dinitrate	302
Diethylene glycol dinitrate	303
Triethylene glycol dinitrate	303
Butane-2-diol-1,4 dinitrate	304
Nitrate esters of monohydroxylic alcohols	304
Methyl nitrate	305
Ethyl nitrate	305
n-Propyl nitrate	306
iso-Propyl nitrate	306
Polyhydroxylic alcohol esters	307
Butane-1,2,3-triol trinitrate	307
Erythritol tetranitrate	307
Pentitol pentanitrates	307
D-Mannitol pentanitrate	307
D-Mannitol hexanitrate	308
Dulcitol D- or L- galactitol hexanitrate and D-sorbitol hexanitrate	309
Pentaerythritol tetranitrate (PETN)	310
Thermodynamic properties and thermal decomposition of PETN	311
Explosive properties	313
Nitration of pentaerythritol	314
Mixed pentaerythritol and glycerol esters	316
Methods of preparation of PETriN and PEDN	317
Nitrite esters (O-Nitroso Compounds)	318
Esters of oxy-acids of chlorine	319
Geminal diperchlorates	319
References	319
Appendix	323
N-Oxides	323

Chapter 11. Production of nitrate esters

324

Nitroglycerine (NG)	324
Hercules tubular process	324
Biazzi process	326
Control of the nitration	327

Separation of NG from the spent acid	328
Alkaline washing of NG	328
Technical data of Biazzi method	328
Safety measures	329
Injector nitration process	330
Safety problems	331
Diethylene glycol dinitrate (DGDN)	332
Triethylene glycol dinitrate	333
Manufacture of pentaerythritol tetranitrate (PETN)	333
Purification of PETN	336
References	338

Chapter 12. Carbohydrate nitrates 339

Cellulose and cellulose nitrates (nitrocellulose)	339
Cellulose for nitration	339
Structure of cellulose polymer and determination of molecular weight	340
Pyrolysis of nitrocellulose	341
Thermochemical properties of nitrocellulose	341
Mixed esters: nitrates and sulphates	342
Stabilization of nitrocellulose	343
Knecht compound	345
Manufacture of nitrocellulose	345
Semi-continuous method of Bofors-Nobel-Chematur	345
Drying of nitrocellulose	348
Safety in the manufacture of nitrocellulose	349
Starch nitrates (nitrostarch)	349
Nitrates of various carbohydrates	350
Polyvinyl nitrate	351
Nitro-derivatives of lignin	351
References	351

Chapter 13. N-Nitro compounds (N-nitramines and N-nitramides) 354

Structure and chemical properties	354
Preparation of nitramines	361
Formation of dinitramines from nitroguanidine	361
N-Nitroenamines	361
Aliphatic nitramines and nitramides	361
Ethylene dinitramine (EDNA, Haleite)	362
Physical and chemical properties	363
Explosive properties	364
Nitroguanidine	365
Reactions of nitroguanidine	366
Specification according to Meyer	367
Nitroaminoguanidine	367
Nitrodiethanolamine dinitrate	368
Preparation	368
Dinitrodi-(β -hydroxyethyl)-oxamide dinitrate (NENO)	369
Aromatic nitramines	369
Tetryl	370
Heterocyclic nitramines	372
Cyclonite (Hexogen, RDX)	372

Structure	372
Spectroscopy of cyclonite	373
Chemical properties	373
Thermal decomposition	374
Preparation of cyclonite	376
Preparation of cyclonite from hexamine dinitrate acetic anhydride	377
Explosive properties of cyclonite	378
Manufacture of cyclonite (RDX) according to Mario Biazzi S.A. (Vevey)	379
Specification for cyclonite (Hexogen)	380
Disposal of waste cyclonite	381
Toxic properties of cyclonite	381
Explosives with cyclonite as a main component	381
Octogen	382
Structure and physical properties	383
Solubility of octogen	387
Chemical properties	387
Thermal decomposition	388
Thermochemical and explosive properties	390
Preparation of octogen	391
Specification for octogen	393
Explosives with octogen as a main component	394
BSX (1,7-Diacetoxy-2,4,6-trinitro-2,4,6-triazaheptane)	395
Dingu and Sorguyl	396
N-Nitro-0-Nitro compounds	397
References	397
Appendix	402

Chapter 14. Explosive polymers 404

C-Nitro polymers	404
Nitropolystyrene and its derivatives	404
Nitroindene polymer	404
Polynitro alkanes	404
Nitroethylene polymer	404
Polyurethanes with aliphatic C- and N-nitro groups	405
Preparation	409
C-Nitro polymers from monomers with a vinyl group	411
Nitroallyl acetate polymer	411
Ethyl nitroacrylate	411
Nitroethyl acrylate	412
Nitroethyl methacrylate	412
Trinitroethyl acrylate	412
Dinitropropyl acrylate (DNPA)	412
Polyesters of dinitrocarboxylic acids and dinitrodiols	413
Polymer with 0-nitro groups	413
Polyvinyl nitrate (PVN)	413
Properties of PVN	413
Explosive properties	414
Preparation of polyvinyl nitrate	415
Practical use of polyvinyl nitrate	418
Modifications of polyvinyl nitrate	419
Hydrazine and difluoroamine polymers	419
N-Nitro polymers	420
Plastic bonded explosives	420
References	420

Chapter 15. Recovery of spent acids	422
General problems of spent acids from the nitration of alcohols	422
Spent acids from nitration of glycerine	423
Stabilization of spent acid	423
Denitration of spent acid	423
Re-use of spent acid from the nitration of glycerine	427
Spent acid of PETN	429
Spent acid from cyclonite (RDX) manufacture	433
Spent acid from nitrocellulose	435
Spent acid from TNT	435
Spent acid from mononitration of toluene	435
Environmental problems of denitration	435
References	436
 Chapter 16. Salts of nitric acid and of oxy-acids of chlorine	 437
Ammonium nitrate	437
Hygroscopicity of ammonium nitrate	439
Chemical and explosive properties	440
Hydrazine nitrates	441
Hydrazine mononitrate	441
Hydrazine dinitrate	442
Hydrazine nitrate complexes ('Hydrazinates')	443
Methylamine nitrate	443
Tetramethylammonium nitrate	443
Guanidine nitrate	444
Nitrates of aromatic amines	444
Ammonium chlorate	444
Ammonium perchlorate	444
Crystal structure and physical properties	445
Thermal decomposition and burning of A P	445
Thermal decomposition of irradiated ammonium perchlorate	447
Influence of pressure on burning of A P	447
Density and critical diameter	449
Decomposition (at higher temperatures) and burning of ammonium perchlorate with various additives	449
Mechanism of low-temperature decomposition of A P	451
Explosive properties of NH_4ClO_4	451
Manufacture of ammonium perchlorate	452
Specification	453
Perchlorate of metals	454
Other perchlorate	455
Hydrazine perchlorate	455
Hydrazine diperchlorate	455
Salts of hydrazine perchlorate and chlorate complexes	455
Nitrosyl perchlorate	456
Hydroxylamine perchlorate	456
Methylamine perchlorate	456
Guanidine perchlorate	456
Nitroguanidine perchlorate	456
Fluoroammonium perchlorate	457
Nitronium perchlorate	457
Perchloric acid and chlorine oxides	457
Perchloric acid	458

Chlorine oxides	458
References	458

Chapter 17. Primary explosives: initiators, initiating explosives (IE) 462

Introduction	462
Burning of IE under reduced pressure	463
Mercuric fulminate	464
Physical properties	465
Chemical properties	466
Chemical stability and behaviour at high temperature	466
Behaviour at low temperature	467
Action of light	467
Burning under reduced pressure	468
Initiating properties of mercuric fulminate	468
Other salts of fulminic acid	469
Manufacture of mercuric fulminate	469
Esters of fulminic acid	469
Hydrazoic acid, its derivatives and salts	469
Decomposition of azides	470
Heterocyclics from azides	470
Other reactions of azide anion and radical	471
Some organic azides	472
Danger of handling azides	473
Cyanic triazide	474
Explosive properties of hydrazoic acid	474
Ammonium azide	474
Physico-chemical and explosive properties of metal azides	475
Optical properties	476
Slow decomposition of azides	476
Fast decomposition and explosion	478
Lead azide	478
Properties of lead azide	479
Crystal structure of $\alpha\text{-Pb}(\text{N}_3)_2$	479
Spontaneous explosions of azides	479
Sensitivity of lead azide	481
Stability and reactivity of lead azide	482
The manufacture of lead azide	482
Silver azide	484
Cadmium azide	486
Storage of azides	486
Toxicity	487
Destruction of lead azide	487
Manufacture of sodium azides	488
Sodium azide formation in liquid ammonia	490
Tetrazene (Tetracene)	490
Tetrazole derivatives and their salts	492
Azotetrazole	493
Furoxane derivatives	494
Nitro derivatives of phenols	494
Lead mononitroresorcinol (LMNR)	494
Lead 2,4-dinitroresorcinate	495
Basic lead 4,6-dinitroresorcinol	495
Lead styphnate	496
Lead salts of nitronaphthols	497

Complex salts	497
1,3,5-Triazido-2,4,6-trinitrobenzene	497
Dinitrobenzenediazooxide (Dinitrodiazophenol, DDNP, DINOL)	497
Salts of acetylene	498
Manufacture of primers	498
Peroxides	499
Propione peroxide	499
Superoxides	500
References	500
Appendix	505
 Chapter 18. Black powder (gun powder)	 506
Modification of black powder	508
Explosive properties	510
Hygroscopicity of black powder	511
Manufacture of black powder	511
The use of black powder	513
Pyrotechnics	513
Accidents with black powder	513
History of black powder	513
References	513
 Chapter 19. Commercial (Mining) Explosives	 515
Introduction	515
Principles of composition of commercial explosives	515
Oxygen balance	515
Hygroscopicity of mining explosives	517
Stability of commercial explosives	519
Physical changes	519
Chemical changes	519
Rate of detonation and critical diameter	520
"Gap test" (Transmission of detonation)	520
Gap test and temperature	522
Channel effect	522
Possible spiral way and detonation of mixed explosives	523
Deflagration of explosives in coal-mines	524
Evaluation of the strength of mining explosives	525
Safety against methane and coal-dust	527
Theory of safety against methane and coal-dust	529
Ammonium nitrate-fuel oil mixtures (AN-FO)	530
Explosive working of metals	532
Mining explosives used in various countries	532
Bulgaria	532
Germany	532
Great Britain	533
Italy	534
Novel mining explosives used in Poland	535
Spain	538
Sweden	538
U.S.S.R. mining explosives	538
Permitted in sulphur mines and oil fields	542
Modern Japanese mining explosives	542

Belgium	545
Water-gel (Slurry) explosives	546
History	546
Cross-linking agents	548
Surface active and emulsifying agents	548
Oxygen carriers	548
Aluminium	548
Alkylamine nitrates	549
Gas bubbles	552
Permitted slurries	552
Slurries with high explosives	552
Composition of slurries with nitroglycerine based explosives	553
Nonel detonating fuse	554
References	554
Appendix	557
Methods of determining the ability of explosives to deflagrate	557
 Chapter 20. The manufacture of commercial (mining) explosives	 558
Planetary mixers	558
Cartridging	561
AN-FO	562
References	567
 Chapter 21. Liquid explosives	 568
Liquid oxygen explosives (Oxyliquits, LOX)	568
Liquid rocket propellants-propergoles	568
Mono- and bipropellants	568
Cryogenic and storable components	569
Hypergolic systems	570
Novel trends in liquid rocket fuel	573
Oxidizers	574
Oxygen difluoride (OF ₂)	574
Nitrogen fluorides	574
Multicomponent fuel	574
Polymerization of hypergolic fuel	575
Analysis	575
References	576
 Chapter 22. Smokeless powder	 577
Stability of smokeless powder	577
Free radicals in the change of diphenylamine	581
Stabilizers	582
Kinetics of decomposition	584
Electric susceptibility of single base powder	584
Erosiveness of smokeless powder	585
Manufacture of powder	585
Single base powder	585
Double base powder	585
Traditional double base powder	585
Rocket double base powder	586

Cast propellants	587
Method of manufacture	587
Slurry-cast propellants (Plastisol propellants)	588
Screw-extrusion process	590
Classical extrusion method	596
Higher energy smokeless propellants	596
References	599

Chapter 23. Composite propellants 602

Introduction	602
Polyurethane binders	604
Polybutadiene binders with carboxylic function	605
Hydroxyterminated polybutadiene binder (HTPB)	609
Curing butadiene polymers	609
Poly (vinyl chloride) plastisol propellants (PVC)	611
High energy composite propellants with HMX (Octogene)	613
Role of ingredients on properties of composite propellants	613
Metals	614
Catalysts	614
Burning composite propellants containing ammonium perchlorate	615
Modifications of composite propellants	616
Mechanical properties	617
Manufacture of composite propellants	617
Shapes of the propellant grains	618
Explosive properties of composite propellants	618
References	620

Chapter 24. Problems of safety in the manufacture and handling of explosives 621

Manufacture	621
Static electricity	622
Foreign bodies in mixing machines	623
Constructions of explosive factories	623
Detection of hidden explosives in luggage	623
Tagging of commercial explosives	625
General description of safety	626
References	626

Chapter 25. Toxicity of explosives 627

Aromatic nitro compounds	627
m-Dinitrobenzene	627
2,4-Dinitrotoluene	627
2,4,6-Trinitrotoluene	628
Aliphatic nitro compounds	628
2-Nitropropane	628
Tetranitromethane	628
Nitrate esters	628
Methyl nitrate	628
Nitroglycerine	629

	CONTENTS	xxiii
Nitrocellulose		629
Nitramines		629
Nitroguanidine		629
Cyclonite (RDX, Hexogene)		629
Octogene (HMX)		629
