

## TABLE OF CONTENTS

### Chapter 1

CATALYTIC SYNTHESIS OF METHANOL .....	1
I. Introduction .....	1
II. Methanol as Fuel and Chemical Feed Stock .....	1
III. History of Methanol Synthesis .....	2
IV. Scientific Problems of Concern in Methanol Synthesis .....	4
A. Synthesis Chemistry .....	4
B. The Difference between Zinc-Based and Copper-Based Catalysts .....	5
C. Water-Gas Shift Reaction .....	5
D. Active Ingredients in Catalysts .....	5
E. Catalyst Deactivation .....	6
F. Thermal Stability and Exothermic Heat of Reaction .....	6
G. Syngas Conversion .....	6
H. Homogeneous Catalysis .....	7
I. Chemical Equilibrium Limitation and Reversible Reaction .....	7
J. Reactor Design .....	9
References .....	9

### Chapter 2

LOW-PRESSURE SYNTHESIS OF METHANOL .....	11
I. Introduction .....	11
II. Catalyst and Catalyst Behavior .....	13
III. <b>Process Technology</b> .....	15
A. The ICI Low-Pressure Methanol Synthesis Process .....	15
B. The Lurgi Low-Pressure Methanol-Synthesis Process .....	17
C. The <b>MGC</b> Low-Pressure Process .....	17
D. Criteria in Process Plant Design .....	17
1. The 100-atm ICI Methanol-Synthesis Process .....	19
2. <b>Nissui-Topsoe</b> Methanol-Synthesis Process .....	19
3. Japan Gas-Chemical Company Process .....	19
References .....	22

### Chapter 3

CHEMISTRY OF METHANOL SYNTHESIS .....	23
I. Introduction .....	23
II. Literature Review and Controversy in Methanol Synthesis .....	24
A. Reaction Mechanisms and Catalytic Interactions .....	24
B. Roles of Carbon Dioxide .....	24
1. Hydrogenation of Carbon Dioxide .....	24
2. Hydrogenation of Carbon Monoxide .....	25
3. Other Studies .....	25
C. Roles of Water .....	26
III. Roles of Carbon Dioxide in Methanol Synthesis .....	26
A. Introduction .....	26
B. Experimental Apparatus and Procedure .....	27
C. Results .....	29
D. Discussion .....	33
E. Conclusions .....	40

IV.	Roles of Water in Methanol Synthesis.....	41
A.	Introduction .....	41
B.	Experimental Apparatus and Procedure.....	41
C.	Results .....	43
D.	Discussion.....	45
	References.....	49

#### Chapter 4

	PORE DIFFUSIONAL RESISTANCES.....	51
I.	Analysis of the Pore Diffusional Problems..	51
A.	Long-Range Gradients.....	51
B.	Short-Range Gradients .....	52
II.	Pore Diffusional Limitations of Vapor-Phase Catalysts .....	54
A.	Effectiveness Factor of a Catalyst Pellet.....	54
B.	Weisz-Prater Criterion for Pore Diffusional Limitation.....	55
C.	Computation of Equilibrium <b>Constants/Properties</b> in Vapor-Phase Synthesis of Methanol .....	56
D.	Experimental Methods for Pore Diffusion Investigation .....	56
E.	Rate Model.....	56
F.	Experimental Confirmations of Diffusional Limitations .....	59
	1. Changing Total Pressure .....	59
	2. Experimental Confirmation with Reduced Catalyst Size .....	61
	3. Weisz-Prater Criterion .....	61
	4. Summary .....	62
III.	Analysis of Pore Diffusional Limitations in the Liquid-Phase Synthesis of Methanol.....	62
A.	Experimental Section.....	63
	1. Experimental Design.....	63
	2. Apparatus.....	64
	3. Experimental Results.....	64
B.	Analysis and Discussion.....	67
	1. Statistical Analysis.....	67
	2. Experimental Determination of Effectiveness Factors .....	67
	3. Estimation of Catalyst Effectiveness .....	69
C.	Summary of Results.....	72
	List of Notations .....	73
	References.....	74

#### Chapter 5

	INTRINSIC KINETICS.....	75
I.	Importance of Diffusion-Free Kinetics .....	75
II.	Kinetics of Vapor-Phase Synthesis of Methanol .....	76
A.	Literature Background.....	76
B.	Kinetics of Vapor-Phase Synthesis of Methanol on Internal Recycle Reactor .....	77
III.	Kinetics of Liquid-Phase Synthesis of Methanol.....	79
A.	Characteristics of Slurry Reactors .....	79
	1. Description of the Transport Phenomena in a Slurry Reactor .....	80
	2. Rough Estimation of Mass-Transfer Gradients.....	81
	3. Assumptions Made in the Interpretation of Kinetic Data.....	82

4.	Global Reaction Rates .....	82
5.	Choice of Design Variable.....	83
6.	Design of Experiments.....	83
B.	Experimental System .....	85
1.	Feed Gas System .....	85
2.	Reactor System .....	88
3.	Product Collection System .....	88
4.	Chromatographic Analysis .....	88
C.	Standard Experimental Procedure.....	89
1.	Preparation of Gas Mixture .....	89
2.	Mass-Flow-Controller Setting .....	89
3.	Reactor Operation and Product Analysis.....	89
4.	Catalyst Preparation.....	90
5.	Material Balance Calculations .....	90
D.	Experimental Data Analysis for Kinetics of Liquid-Phase Synthesis .....	91
1.	Choice of Modeling Approaches.....	91
2.	Development of a Model .....	91
E.	Discussion.....	97
	References.....	98

## Chapter 6

	THERMAL STABILITY OF EXOTHERMIC METHANOL REACTOR .....	101
I.	Introduction.....	101
II.	Literature Review.....	101
III.	Theoretical Background.....	104
A.	General Stability Criteria .....	104
B.	Stability Criterion Assuming First-Order Reaction.....	105
IV.	Experimental.....	107
A.	Apparatus .....	107
B.	Procedure.....	110
V.	Results and Discussion.....	112
A.	Experimental Data.....	112
B.	Experimentally Obtained Van Heerden Diagram .....	116
C.	Experimentally Measured Slope Condition .....	116
1.	Case Studies .....	116
2.	Comparison .....	118
D.	Stability Criteria Assuming a First-Order Rate Equation .....	120
E.	Comparison of Vapor- and Liquid-Phase Stability Criteria .....	121
	List of Notations .....	123
	References.....	124

## Chapter 7

	EXTERNAL MASS-TRANSFER RESISTANCES .....	127
I.	Problem of External Mass Transfer .....	127
A.	Mass Transfer in Liquid-Phase Synthesis.....	128
B.	Mass-Transfer Studies in a Slurry Reactor .....	128
II.	Theory Development and General Background .....	129
A.	Mechanistic Mass-Transfer Rates at Steady State.....	129
1.	Reaction Order Different from First Order.....	132
B.	Controlling Resistances.....	134

C.	Dimensional Analysis .....	135
D.	Correlating Variables and Their Combination .....	135
E.	Experimentation and Data Correlation.....	137
F.	Investigation Scheme.....	137
III.	Experimental System and Procedure .....	138
A.	Mechanically Agitated Slurry Reactor System.....	138
B.	Experimental Scheme .....	141
1.	Catalysts Used .....	141
2.	Experimental Determination .....	141
3.	Catalyst Reduction.....	141
4.	Reaction Rate Measurement .....	144
5.	Material Balance Calculations .....	146
IV.	Mass-Transfer Data Analysis and Correlation.....	146
A.	Brief Summary .....	146
B.	Correlations for Overall Gas-Liquid Mass Transfer in a Mechanically Stirred Slurry Reactor.....	147
C.	Comparison Between Experimental Data and Predictions .....	149
D.	Reaction Rate Expression and Controlling Resistances .....	150
E.	Example Cases .....	151
F.	Reactors Other than Mechanically Agitated Slurry Reactors.....	152
	List of Notations .....	153
	References.....	155

## Chapter 8

	CATALYTIC ACTIVITY AND LIFE.....	157
I.	Introduction.....	157
II.	Composition of the Copper-Zinc-Alumina Catalyst .....	157
III.	Reduction of Methanol-Synthesis Catalyst .....	159
A.	Introduction .....	159
B.	Description of the Experimental System and Procedure .....	160
C.	Results and Discussion .....	160
IV.	Phases in the Active Liquid-Phase Methanol-Synthesis Catalyst .....	163
A.	Introduction .....	163
B.	Experimental .....	164
C.	Results and Discussion .....	166
D.	Conclusions .....	169
V.	Crystal Size Growth in the Liquid-Phase Methanol-Synthesis Catalyst.....	169
A.	Introduction .....	169
B.	Experimental .....	170
C.	Results and Discussion .....	171
D.	Conclusions and Significance.....	173
VI.	Leaching of Methanol-Synthesis Catalyst in Liquid-Phase Process.....	175
A.	Effect of Water on Catalyst .....	176
B.	Leaching Experiments.....	178
1.	System Description .....	178
2.	Experimental Procedure.....	178
C.	Experimental Design .....	181
D.	Atomic Absorption Spectrometry Analysis .....	182
1.	<b>Part I</b> .....	182
2.	Discussion of ANOVA .....	183
E.	X-ray Diffraction Analysis Results .....	185

F.	Discussion on Catalyst Leaching .....	186
1.	Influence of Water on Catalyst Leaching .....	186
2.	Influence of Temperature on Catalyst Leaching.....	186
VII.	Catalyst Regeneration.....	186
	References.....	191

## Chapter 9

	THERMODYNAMICS.....	195
I.	Thermodynamics of the Reaction System .....	195
A.	Determination of Equilibrium Composition.....	196
II.	Multicomponent Vapor-Liquid Equilibrium of Liquid-Phase Methanol Synthesis.....	198
A.	Introduction .....	198
B.	Approach and Theoretical Background.....	200
C.	Experimental .....	204
D.	Results and Discussion .....	206
1.	Pure Gas Solubilities.....	206
2.	Binary Vapor-Liquid Equilibrium.....	207
3.	Multicomponent Phase Equilibrium.....	207
4.	Properties of Inert Solvent .....	212
III.	Chemical Equilibrium in the Liquid-Phase Synthesis .....	212
A.	Fundamental Theory.....	212
B.	Chemical Equilibrium in Liquid Phase .....	214
C.	Ultimate Chemical Equilibrium.....	218
D.	Computation of Ultimate Chemical Equilibrium.....	220
IV.	Thermodynamic Consistency of the Proposed Reaction Rate.....	221
	List of Notations .....	223
	References.....	224

## Chapter 10

	CATALYSIS.....	225
I.	Introduction.....	225
II.	Heterogeneous Catalysis .....	225
III.	Homogeneous Catalysis.....	227
IV.	Comparison of Homogeneous and Heterogeneous Processes .....	228
	References.....	229

	Index .....	231
