

ALCOHOL PRODUCTION FROM BIOMASS
IN THE DEVELOPING COUNTRIES

	<u>Page</u>
<u>PRINCIPAL ABBREVIATIONS AND ACRONYMS USED</u>	i
<u>SUMMARY AND CONCLUSIONS</u>	ii-ix
I. <u>INTRODUCTION</u>	1
II. <u>CHARACTERISTICS OF ETHANOL</u>	3
A. Physical/Chemical Properties	3
B. Energy Content of Ethanol	4
III. <u>CURRENT AND POTENTIAL USES</u>	5
A. Ethanol Use as Boiler Fuel	5
B. Ethanol Use as Gasoline Substitute	5
C. Ethanol Use as Diesel Substitute	8
D. Ethanol Use in Chemical Industry	9
IV. <u>PRODUCTION AND CONSUMPTION OF ETHANOL</u>	11
A. World Ethanol Production	11
B. Historic Ethanol Consumption	12
C. Ethanol Prices	14
V. <u>BIOMASS RAW MATERIALS FOR ETHANOL PRODUCTION</u>	16
A. Sugars	17
B. Starches	18
C. Celluloses	19
VI. <u>ETHANOL PRODUCTION TECHNOLOGY</u>	21
A. Current Technology	21
B. Technology Development	24
C. Environmental Impact	25
D. Surplus Bagasse	26
E. Energy Balance for Ethanol Production	26
VII. <u>CAPITAL COSTS OF ALCOHOL PLANTS</u>	31
A. Sugarcane Based Plants	31
B. Molasses Based Plants	32
C. Cassava/Corn Based Plants	33
D. Economies of Scale	33

VIII.	<u>ECONOMICS OF ETHANOL PRODUCTION AND USE</u>	36
A.	General Approach	36
B.	Economics of Ethanol as Gasoline Blend	37
C.	Economics of Ethanol for Chemical Applications	45
D.	Employment Impact	46
IX.	<u>PROSPECTS FOR ALCOHOL PRODUCTION IN DEVELOPING COUNTRIES</u>	48
A.	Agricultural/Energy Self-sufficiency	49
B.	Economic Parameters	50
X.	<u>POLICY ISSUES RELATED TO ALCOHOL PRODUCTION IN THE DEVELOPING COUNTRIES</u>	53
A.	Competition between Food and Energy Crops	53
B.	Need for Integrated Alcohol Systems	54
C.	Need for National Alcohol Program Policies	55
XI.	<u>ROLE OF THE WORLDBANK</u>	57

TEXT TABLES

1.	Main Physical/Chemical Properties of Ethanol and Hydrocarbon Fuels	3
2.	Calorific Values of Common Fuels	4
3.	World: Estimated Ethanol Production, 1977	11
4.	United States: Ethanol Consumption, 1955-83	12
5.	EEC: Major Ethanol Uses, 1977	13
6.	Japan: Ethanol Consumption Pattern, 1974-78	13
7.	Anhydrous Ethanol Prices, Mid-1979	15
8.	Ethanol Yields of Main Biomass Raw Materials	16
9.	Material and Utility Balance for Ethanol Production from Sugarcane and Cassava	21
10.	Net Energy Analysis for Ethanol	29
11.	Brazil: Capital Costs of Alcohol Plants	31
12.	Estimated Installed Cost of 120,000 Liters/Day Plant	32
13.	Rough Relationships between Ex-refinery Gasoline Values and Oil Prices	38
14.	Ethanol Production from Sugarcane: Estimated Economic Rate of Return	39
15.	Key Parameters of Ethanol Production from Different Biomass Materials	40

TEXT FIGURES

1.	Alcohol from Biomass: Production of Chemicals from Ethanol by Major Process Routes	10
2.	Alcohol from Biomass: Process Flow Diagram for Cassava Based Plant	22
3.	Alcohol from Biomass: Estimated Capital Costs of Ethanol Plants	35
4.	Ethanol from Sugarcane: 120,000 Liters Per Day Distillery in Middle Cost Country, 180 Days of Operation Per Year . . .	42
5.	Ethanol from Molasses: 120,000 Liters Per Day Distillery in Middle Cost Country Fueled by Bagasse	44
6.	Ethanol from Corn: 120,000 Liters Per Day Distillery in Middle Cost Country	47
7.	Alcohol Production from Biomass: Energy and Agricultural Self-sufficiency Ratios for Selected Countries, 1976	51

ANNEXES

Economics of Ethanol Production from Sugarcane, Molasses, Cassava and Corn	58-69
