

## CONTENTS

I	Economics of crude oil and natural gas, cost of adding production	1
II	Economic Evaluation by era of alternative fossil energy technologies	13
III	Economic comparison of synthetic fuels- Gasification and Liquefaction	39
IV	The relative advantages of coal conversion routes for electric power generation	65
V	Economic data for a 50,000 bpd lurgi/ruhr gas shale oil plant	79
VI	EVALUATION of the Lawrence Livermore laboratory	107
VII	CLEN energy from Alaskan coals	143
VIII	FLASH hydrolysis process for conversion of lignite to liquid and Gaseous products	163
IX	The igt Low-Btu gas Process-Design & Economics	193
X	Fuel gas Production via Koppers-Totzek Gasification	215
XI	Winkler technology for clean fuels for coal	251
XII	Preliminary economic analysis	287
XIII	Economics of ethylene production via pyrolysis of Coal-Based Fischer-Tropsch Hydrocarbons	319
XIV	COMPARATIVE economics for the Arthur D. Little extractive Coking process	333
XV	Economics of synthetic gas production by the Segas <sup>tm</sup> process	357
XVI	TECHNOLOGY and economics of industrial fuel gas from coal	375
XVII	A Comparison of operational economics of transportation vehicles operated on Ggasoline & Coal-Generated hydrogen	397
XVIII	Efficiency & cost advantages of an advanced-Technology nuclear ELECTROLYIC hydrogen-Electrolytic production facility	421
XIX	The economics of industrial process heat from solar energy	435
XX	Economic feasibility of the conversion of organic waste to fuel oil and pipeline gas	443
