

CONTENTS

Preface	xi
1. Bioconversion for production of renewable Transportation fuels in the United States	1
2. Cellulase and xylanase systems of <i>Thermotoga neapolitana</i>	54
3. Structure-Function studies of Endo-1,4- β -D-glucanase E2 from <i>Thermomonospora fusca</i>	66
4. Role of Cellulose-Binding Domain of cellobiohydrolase I in Cellulose Hydrolysis	75
5. CelS: A Major Exoglucanase Component of <i>Clostridium thermocellum</i> Cellulosome	84
6. Plant Endo-1,4- β -D-glucanases: Structure, Properties, and Physiological Function	100
7. Approaches to Cellulase Purification	130
8. Cellobiose Dehydrogenase	179
9. Cellulase Production Technology	188
10. Cellulase Assays	218
11. Components of <i>Trichoderma reesei</i> cellulase complex on Crystalline cellulose	236
12. Deposition of Metallic Platinum in blue-Green Algae Cells	246
13. Genetic Engineering Approaches for Enhanced Production of Biodiesel Fuel From Microalgae	255
14. Microbial and Enzymatic Biofuel cells	271
15. Pretreatment of Lignocellulosic Biomass	292
16. Bioconversion of wood Residues	325
17. Development of Genetically engineered Microorganisms for Ethanol production	342
18. Kinetic consequences of High Ratios of Substrate to Enzyme Saccharification Systems Based on <i>Trichoderma</i> cellulase	363
19. Pectin-Rich Residues Generated by Processing of citrus fruits, Apples, and Sugar Beets	372
20. Silage Processing of Forage Biomass to Alcohol fuel	391
21. Conversion of Hemicellulose Hydrolyzates to Ethanol	411
22. Anaerobic Digestion of Municipal Solid Waste	438
23. Role of Acetyl Esterase in Biomass Conversion	452
24. Metabolism of Xylose and Xylitol by <i>Bachysolen tannophilus</i>	468
Author Index	484
Affiliation Index	485
Subject Index	485
