

## CONTENTS

Preface	vii
Units and conversion tables	ix
Specific gravity conversion chart	ix
Temperature conversion chart	x
Beer volume conversion table	x
Conversion factors	xi
Barley and malt measures	xii
1. Overview of the brewing process	1
1.1 Raw materials	2
2. Basic chemistry for brewing science	8
2.1 Introduction	8
2.2 Chemical bonds and water	8
2.3 pH and buffers	13
2.4 Proteins	15
2.5 Enzymes	25
2.6 Carbohydrates	30
3. Barley	36
3.1 Introduction	36
3.2 Overview of malting	36
3.3 Barley for malting	37
3.4 Barley evaluation	38
3.5 The barley kernel	42
3.6 Growth of the barley plant in the field	44
4. Malting technology: malt, specialized malts and non-malt adjuncts	48
4.1 Overview of technology	48
4.2 Preparation of barley for malting	49
4.3 Steeping	51
4.4 Germination	56
4.5 Kilning	58
4.6 Malt quality, analysis and specification	62

4.7 Special malts	64
4.8 Non-malt sources of extractable carbohydrate (adjuncts)	67
5. Malting biochemistry	71
5.1 Introduction	71
5.2 The single kernel	71
5.3 Barley modification	72
5.4 Enzymes and substrates	77
5.5 Control of malting loss	81
5.6 Kilning	83
6. Mashing technology	84
6.1 Introduction	84
6.2 Malt storage and milling	84
6.3 Mashing technology	88
6.4 Temperature-programmed mashing	94
6.5 Wort separation	99
6.6 Practical calculations	101
7. Mashing biochemistry	106
7.1 Introduction	106
7.2 Starch	107
7.3 Amylases	108
7.4 Mash temperature	109
7.5 Mash dilution	114
7.6 Temperature-programmed mashes	116
7.7 Other enzymes	118
7.8 Addition of enzymes	119
8. Hops technology	121
8.1 Historical background	121
8.2 Botany	121
8.3 Brewing value	122
8.4 Cultivation	123
8.5 Processed hops	125
9. Hop chemistry and wort boiling	129
9.1 Introduction	129
9.2 The resins	129
9.3 Wort boiling	135
9.4 The essential oil of hops	138
9.5 Kettle boil	140

10. Brewer's yeast	147
10.1 Introduction	147
10.2 The chosen strain	147
10.3 Freedom from contaminating microbes	151
10.4 The health of yeast	153
10.5 Yeast propagation	155
10.6 Yeast handling and storage	157
10.7 Improved brewing strains	158
10.8 Waste yeast	159
11 Fermentation-overview, process and technology	160
11.1 Overview	160
11.2 Process and technology	161
11.3 Secondary fermentation, conditioning and maturation	170
12 Fermentation biochemistry	173
12.1 Metabolic diversity of yeast	173
12.2 Yeast nutrition	173
12.3 Metabolic processes -general characteristics	174
12.4 Metabolism of wort sugars	175
12.5 Metabolism of amino acids	184
12.6 Role of molecular oxygen and lipid metabolism	184
13 Microbiology and microbial contaminants of brewing	191
13.1 Introduction	191
13.2 Basic properties of microbes	193
13.3 Microbiological practice relevant to brewing	193
13.4 Rapid and automated methods	199
13.5 Sources of microbes in brewing	202
13.6 Microbes of the brewing process	203
13.7 Wild yeasts	209
14 Finishing processes	211
14.1 Maturation	211
14.2 Clarification	213
15 Beer packaging and dispense	218
15.1 Small packages	218
15.2 Large containers	225
16 Beer quality and flavor	232
16.1 Introduction	232
16.2 Flavor	233
16.3 What gives beer its flavor?	236

16.4 Analysis of flavor	23
16.5 Beer types	242
Additional reading	248
Books	248
Periodicals	250
Index	252
