Project Staff.....	V
Foreword by the Secretary General of EuroGeoSurveys	IX
Foreword by the President of the Federal Institute for Geosciences and Natural Resources, Germany and the Director of the Geological Survey of Norway	XI
Abstract	1
1 Introduction.....	3
1.1 The Concept of the "Geochemistry of European Bottled Water" Project	3
1.2 What is Groundwater?	4
1.3 What is Mineral Water?	5
1.3.1 From Mineral Water Springs and Spas to the Bottled Water Market.....	6
1.4 The Legal Framework: Bottled Waters, Spring Waters and Mineral Waters.....	7
1.4.1 Natural Mineral Water	8
1.4.2 Spring Water	11
1.4.3 Other Bottled Water / Table Water.....	11
1.4.4 Medicinal Waters	11
1.5 What does this Atlas Represent?	11
2 The Hydrochemistry of Groundwater.....	13
2.1 The Influence of Rainfall	13
2.2 The Influence of Vegetation	13
2.3 The Influence of Soil.....	13
2.4 Acid-Base Reactions	14
2.5 Dissolution Reactions	14
2.6 Redox Reactions	14
2.7 Mixing with deep Saline Waters.....	15
2.8 Carbon Dioxide	15
2.9 Water Typés	15
3 Background Information.....	17
3.1 Topography	17
3.2 Geology	17
3.2.1 Mineral Deposits of Europe	22
3.2.2 Hydrogeological map of Europe	23
3.3 Soil.....	23
3.4 Climate.....	24
3.5 Vegetation and Land Use	25
3.6 Human Activities	25
4 Methods.....	29
4.1 Sampling.....	29
4.2 Analyses	29
4.2.1 Sample preparation	33
4.2.2 ICP-QMS analyses	33
4.2.3 ICP-AES analyses	34
4.2.4 Atomic fluorescence spectrometry (AFS).....	35
4.2.5 Ion Chromatography (IC)	35
4.2.6 Photometric analyses	35
4.2.7 Titration.....	35
4.2.8 Potentiometry.....	35
4.2.9 Conductometry	35

4.3	Quality Control	35
4.3.1	International Reference Materials	36
4.3.2	The in-house MinWas project standard	36
4.3.3	Sample blanks	36
4.3.4	Detection limits	36
4.3.5	Duplicate analyses	43
4.3.6	Comparison of analytical results with the water composition provided on the labels	43
4.3.7	Re-analyses of selected samples	44
4.4	Possible Problems with the Data in Terms of Representing True "Groundwater Quality" or being able to Reflect "Geology"	46
4.4.1	Bottle leaching	46
4.4.2	The effect of carbonatisation	48
4.4.3	Other forms of water treatment	48
4.4.4	Further possible disturbing factors	51
4.5	Data Analysis and Mapping	51
5	Datasets	52
5.1	Bottled Water	52
5.2	European Tap Water	52
5.3	Other Datasets	52
6	Comparing Bottled Water with European Tap Water, Hardrock Groundwater from Norway and European Surface Water	53
7	Maps and their Interpretation	63
8	Health Implications	201
8.1	Elements with established MAC-Values for Mineral Water (EU Directive 2003/40/EC Mineral Water)	202
	Antimony, p. 202; Arsenic, p. 202; Barium, p. 203; Cadmium, p. 203; Chromium, p. 203; Copper, p. 203; Fluoride, p. 204; Lead, p. 204; Manganese, p. 204; Mercury, p. 204; Nickel, p. 205; Nitrate, p. 205; Nitrite, p. 205; Selenium, p. 205	
8.2	Elements (Parameters) with Established MAC (or Guideline)-Values for Drinking Water (EC Directive 98/83/EC) but not for Mineral Water	205
	Aluminium, p. 205; Ammonium, p. 206; Boron, p. 206; Chloride, p. 206; Electrical conductivity (EC), p. 206; Iron, p. 206; pH-value, p. 206; Sodium, p. 206; Sulphate, p. 207	
8.3	Elements with non-EU Drinking Water MAC Values	207
	Silver, p. 207; Beryllium, p. 207; Molybdenum, p. 207; Strontium, p. 207; Thallium, p. 207; Uranium, p. 207; Vanadium, p. 208; Zinc, p. 208	
8.4	Other Health-Relevant Elements	208
	Iodine, p. 208; Lithium (Rubidium, Caesium), p. 208; Rare Earth Elements, p. 209; Thorium, p. 209	
8.5	Additional Remarks	209
9	Conclusions	211
	References	213
	Appendix A (Table of Water Action Levels as defined by the EU and for the majority of Countries from which water samples are included in this study)	221
	Appendix B (Statistical summary table for the datasets used in this Atlas)	251
