

CONTENTS

Preface	v
Contributors	xi
PART I SPOILAGE ORGANISMS	
1 Psychrotropic Microorganisms : Agar Plate Methods, Homogenization, and Dilutions	3
2 Biochemical Identification of Most Frequently Encountered Bacteria That Cause Food Spoilage	11
3 Mesophilic Aerobic Microorganisms	25
4 Yeasts and Molds	27
5 Coliforms	29
6 Genetic Analysis of Food Spoilage Yeasts	37
PART II PATHOGENS	
7 Conductimetric Method for Evaluating Inhibition of <i>Listeria monocytogenes</i>	55
8 Molecular Detection of Enterohemorrhagic <i>Escherichia coli</i> O 157:H7 and Its Toxins in Beef	61
9 Detection of <i>Listeria monocytogenes</i> by the Nucleic Acid Sequence- Based Amplification Technique	67
10 Detection of <i>Escherichia coli</i> O 157:H7 by Immunomagnetic Separation and Multiplex Polymerase Chain Reaction	85
11 Detection of <i>Campylobacter jejuni</i> and Thermophilic <i>Campylobacter</i> spp. From Foods by Polymerase Chain Reaction	95
12 Magnetic Capture Hybridization Polymerase Chain Reaction	107
13 Enterococci	111
14 Salmonella	113
15 Campylobacter	119
16 <i>Listeria monocytogenes</i>	125

PART III FERMENTED FOODS

17	Methods for Plasmid and Genomic DNA Isolation from Lactobacilli	135
18	Methods for the Detection and Concentration of Bacteriocins Produced by Lactic Acid Bacteria	141
19	Meat Protein Degradation by Tissue and Lactic Acid Bacteria Enzymes	147
20	Maintenance of Lactic Bacteria	163
21	Probiotic Properties of Lactobacilli : Cholesterol Reduction and Bile Salt Hydrolase activity	173
22	Identification of Exopolysaccharide-Producing Lactic Acid Bacteria : A Method for the Isolation of Polysaccharides in Milk Cultures	183
23	Diferentiation of Lactobacilli Strains by Electrophoretic Protein Profiles	191
24	Methods to Determine Proteolytic Activity of Lactic Acid Bacteria	197
25	Methods for Isolation and Titration of Bacteriophages from Lactobacillus	203
26	Identification of Yeasts Present in Sour Fermented Foods and Fodders	209

PART IV ORGANISMS IN THE MANUFACTURE OF OTHER FOODS AND BEVERAGES

27	Protein Hydrolysis : Isolation and Characterization of Microbial Proteases	227
28	Production of Polyols by Osmotolerant Yeasts	233
29	Identification of Yeasts from the Grape/Must/Wine System	243
30	Carotenogenic Microorganisms : A Product-Based Biochemical Characterization	259
31	Genetic and Chromosomal Stability of Wine Yeast	273
32	Prediction of Prefermentation Nutritional Status of Grape Juice : The Formol Method	283
33	Enological Characteristics of Yeasts	297
34	Utilization of Native Cassava Starch by Yeasts	307

35

PART V SPECIAL METHODS AND EQUIPMENT

36	Reactor Configuration for Continuous Fermentation in Immobilized Systems : Application to Lactate Products	321
37	Molecular Characterization of Yeast Strains by Mitochondrial DNA Restriction Analysis	329
38	Selection of Yeast Hybrids Obtained by Protoplast Fusion and Mating, by Differential Staining, and by Flow Cytometry	335

Differential Staining and	Micromanipulation	341
39	Flotation Assay in Small Volumes of Yeast Cultures	349
40	Obtaining Strains of <i>Saccharomyces</i> Tolerant to High Temperatures and Ethanol	355
41	Multilocus Enzymes Electrophoresis	369
42	Bacteriocin Production Process by a Mixed Culture System	395
PART VI REVIEWS		
43	Nutritional Status of Grape Juice	415
44	Problems with the Polymerase Chain Reaction, Inhibition, Facilitation, and Potential Errors in Molecular Methods	427
45	Problems with Genetically Modified Foods	481
	Index	485
