<i>List of contributors</i>	xi
<i>Preface</i>	xv
1 Introduction	1
<i>M. Brown, Unilever Research, Sharnbrook and M. Stringer, Campden and Chorleywood Food Research Association, Chipping Campden</i>	
1.1 References	4
2 The evolution of microbiological risk assessment	5
<i>S. Notermans and A. W. Barendsz, TNO Nutrition and Food Research Institute, Zeist and F. Rombouts, Wageningen Universiteit</i>	
2.1 Introduction	5
2.2 Historical aspects of safe food production	6
2.3 The evolution of food safety systems	7
2.4 International food safety standards	23
2.5 Present and future uses of microbiological risk assessment ..	29
2.6 List of abbreviations	38
2.7 References	39
Part I The methodology of microbiological risk assessment	45
3 Microbiological risk assessment (MRA): an introduction	47
<i>J. L. Jouve, Ecole Nationale Vétérinaire de Nantes</i>	
3.1 Introduction	47

3.2	Key steps in MRA	49
3.3	Hazard identification	53
3.4	Hazard characterisation/dose–response assessment	54
3.5	Exposure assessment	57
3.6	Risk characterisation	60
3.7	References	63
4	Hazard identification	64
	<i>M. Brown, Unilever Research, Sharnbrook</i>	
4.1	Introduction: the importance of correct hazard identification	64
4.2	What is hazard identification?	64
4.3	What hazard identification should cover and produce as an output	65
4.4	What to do in hazard identification	66
4.5	Key information in hazard identification	67
4.6	Tools in hazard identification	69
4.7	Microbial hazards	70
4.8	Identifying the origin and distribution of microbial hazards	72
4.9	Changes in microbial hazards	73
4.10	Other biological hazards	75
4.11	References	75
5	Hazard characterization/dose–response assessment	77
	<i>S. B. Dennis, M. D. Milotis and R. L. Buchanan, US FDA, College Park</i>	
5.1	Introduction: key issues in hazard characterization	77
5.2	Types of dose–response data	83
5.3	Modeling dose–response relationships	86
5.4	Problems in hazard characterization	90
5.5	Future trends	94
5.6	Sources of further information and advice	96
5.7	References	97
6	Exposure assessment	100
	<i>M. Brown, Unilever Research, Sharnbrook</i>	
6.1	Introduction	100
6.2	The role of exposure assessments in microbiological risk assessment	101
6.3	What’s in an exposure assessment?	105
6.4	Who should do an exposure assessment and when?	109
6.5	Building up supply chain data for an exposure assessment ..	109
6.6	Sources of information	111
6.7	Types of data used in an exposure assessment	114

6.8	The output of an exposure assessment	117
6.9	References	123
7	Risk characterisation	127
	<i>P. Voysey, K. Jewell and M. Stringer, Campden and Chorleywood Food Research Association, Chipping Campden</i>	
7.1	Introduction: key issues in risk characterisation	127
7.2	Risk characterisation requirements	129
7.3	Risk characterisation methods	135
7.4	Quantitative and qualitative outputs	142
7.5	Risk characterisation in practice: some examples	147
7.6	Current problems and future trends	151
7.7	References	153
8	Risk communication	155
	<i>R. Mitchell, Public Health Laboratory Service, London</i>	
8.1	Introduction	155
8.2	The concept of risk	156
8.3	Risk perception	158
8.4	The concept of communication	163
8.5	Risk communication	166
8.6	The future of risk communication	169
8.7	References	170
Part II	Implementing microbiological risk assessments	173
9	Implementing the results of a microbiological risk assessment: pathogen risk assessment	175
	<i>M. Van Schothorst, Wageningen University</i>	
9.1	Introduction	175
9.2	Establishing food safety objectives	177
9.3	Developing food safety management strategies	181
9.4	Establishing microbiological criteria	185
9.5	Problems in implementation	190
9.6	Future trends	191
9.7	References	191
9.8	Acknowledgement	192
10	Tools for microbiological risk assessment	193
	<i>T. Wijtzes, Wijtzes Food Consultancy, Gorinchem</i>	
10.1	Introduction	193
10.2	Qualitative tools for risk assessment	195
10.3	Predictive modelling	196
10.4	Tools for modelling, prediction and validation	203
10.5	Future trends	209

10.6	Sources of further information and advice	210
10.7	References	211
11	Microbiological criteria and microbiological risk assessment	214
	<i>T. Ross, University of Tasmania, and C. Chan, Safe Food Production NSW, Sydney</i>	
11.1	Introduction	214
11.2	Types of criteria	215
11.3	Key issues in the use of microbiological criteria	217
11.4	Dealing with variability, uncertainty and hazard severity: sampling plans	221
11.5	Microbiological criteria and food safety assurance: food safety objectives	226
11.6	Using microbiological risk assessments: to set microbiological criteria	228
11.7	Using microbiological risk assessments to develop performance and process criteria	231
11.8	Using microbiological risk assessments to prioritise risk management actions	236
11.9	Using criteria in risk assessments	237
11.10	Future trends	239
11.11	Further reading	240
11.12	References	241
	Appendix	246
12	HACCP systems and microbiological risk assessment	248
	<i>R. Gaze, R. Betts and M. Stringer, Campden and Chorleywood Food Research Association, Chipping Campden</i>	
12.1	Introduction	248
12.2	Legal requirements for HACCP systems	249
12.3	International guidance on HACCP implementation	250
12.4	Problems in HACCP implementation	256
12.5	The interaction between HACCP systems and microbiological risk assessment (MRA)	258
12.6	The future relationship of HACCP systems and MRA	261
12.7	References	263
13	The future of microbiological risk assessment	266
	<i>M. Brown, Unilever Research, Sharnbrook and M. Stringer, Campden and Chorleywood Food Research Association, Chipping Campden</i>	
13.1	Introduction	266
13.2	Information needs for risk assessment	269
13.3	How should risk assessment processes develop?	278

13.4	Key steps in risk assessment	280
13.5	Risk acceptance	284
13.6	The outputs of risk assessment: risk management and communication	289
13.7	Conclusion	292
13.8	References	292
<i>Index</i>	293
