Pre	face		xi
1	The Structure and Habit of Microorganisms		
	1.1		I
	1.2	B	2 2
		1.2.1 Bacteria	2
		1.2.2 Fungi	8
		1.2.3 Viruses	13
		1.2.4 Protozoa	13
		1.2.5 Toxic algae	14
	1.3		15
	1.4	1.3.1 Bacterial classification	15
	1.4		15
		1.4.1 Total colony counts	16
		1.4.2 Indicator organisms	16 17
		1.4.3 Enterobacteriaceae and coliforms	17 18
		1.4.4 Gram-negative psychrotrophs 1.4.5 Lactic acid bacteria	18
		1.4.6 Yeasts and moulds	18
	15		19
	1.5	Further reading	19
2		ors Affecting the Growth, Survival and Death of Microorganisms	21
	2.1	Introduction	21
	2.2	Some important characteristics of food contaminant microorganisms	21
		2.2.1 Characteristics that can be studied in the laboratory	21
		2.2.2 Characteristics that inhibit study in a (normal/routine)	~~
	• •	laboratory	22
	2.3		23
	2.4	2.3.1 The factors that affect microbial growth	24
	2.4	Further reading	39
3		amentals of the Microbial Ecology of Foods 1: Food Spoilage and	
		-borne Illness	40
	3.1		40
	3.2	Microbial contamination – sources, routes and control	40

	3.3	The fate of microorganisms in food	42
	3.4	The consequences of microbial growth in foods	43
		3.4.1 Food spoilage	43
		3.4.2 Food-borne illness	50
	3.5	Further reading	56
4	Fund	amentals of the Microbial Ecology of Foods II: Food Preservation and	
		entation	58
	4.1	Introduction	58
	4.2	Controlling shelf life by preservation systems	59
		4.2.1 Temperature of processing and storage	60
	4.3	Microbial fermentations and biotechnology	62
	4.4	Further reading	67
5		cations of Microbiology in the Food Industry	68
	5.1	Introduction	68
	5.2	Hazard Analysis Critical Control Point (HACCP)-based Systems	
		and Microbiology	68
	5.3	Risk assessment and microbiology	75
		Raw food materials / ingredients and microbiology	77
	5.5	Hygiene monitoring and microbiology	79
		5.5.1 Swabs	80
		5.5.2 Solid or liquid samples	82
		5.5.3 Personnel	83
		5.5.4 Air	83
		5.5.5 Test results and their interpretation	84
		Process monitoring and microbiology	84
	5.7	Finished products and microbiology	86
		5.7.1 Conformance to microbiological criteria	86
		5.7.2 Product shelf life evaluations	87
		5.7.3 Microbiological challenge testing	90
		Trouble-shooting, crisis management and microbiology Further reading	91 92
		-	
6		ratory Design and Equipment	93
	6.1		93
		6.1.1 Standards required for the design and construction of a microbiology laboratory	93
	6.2	The building	94
	6.3	Internal structure. fittings and services	96
	6.4	Work flow	99
	6.5	Equipment	100
	6.6	Further reading	113
7	Labo	ratory Operation and Practice	115
	7.1	Introduction	115
	7.2	Standard operating procedures	115

	7.3 Laboratory staff and personal practices			116	
	7.4	Labora	ntory housekeeping	121	
		7.4.1	General	121	
		7.4.2	Laboratory waste disposal	121	
		7.4.3	Environmental monitoring	122	
	7.5	Labora	tory quality standards and procedures	122	
		7.5.1	General	122	
		7.5.2	Laboratory assessment / accreditation and external quality		
			assessment (proficiency testing)	123	
		7.5.3		124	
			General procedures	125	
			Reference cultures	139	
		7.5.6	, .		
			results	145	
	7.6	Furthe	r reading	147	
8	Labo		tandards of Operation: Accreditation and Documentation	148	
	8.1	Introd		148	
			Laboratory accreditation: assessment criteria	148	
	8.2		rd operating procedures	155	
	8.3		e processing documentation	155	
	8.4	Summa		171	
	8.5	Furthe	r reading	171
