<i>Preface to the Second Edition</i>	<i>iii</i>
<i>Preface to the First Edition</i>	<i>v</i>
<i>Contributors</i>	<i>xvii</i>
Industrialization of Fermented Soy Sauce Production Centering Around Japanese Shoyu <i>Danji Fukushima</i>	1
I. Introduction	1
II. History	2
III. Present Soy Sauce Situation	11
IV. Change of Soy Sauce Manufacturing Methods from Indigenous to Modern Processing	31
V. Microbiology and Biochemistry	48
VI. Application of New Biotechnology for Soy Sauce Manufacture	80
VII. Forecast	88
References	88
	vii

2. Industrialization of Japanese Miso Fermentation	99
<i>Hideo Ebine</i>	
I. Introduction	99
II. History and Earliest Known References to Miso	100
III. Indigenous Process: Raw Materials Used in Ancient Times	103
IV. Industrial/Commercial Production Today	105
V. Contrast Between Indigenous and Modern Processing	115
VI. Critical Steps in Manufacture/Fermentation	122
VII. Major Problems in the Industrialization	122
VIII. Optimal Environmental Conditions for Microorganisms	124
IX. Essential Microorganisms for Fermentation	125
X. Possible Spoilage Microorganisms	126
XI. Chemical/Biochemical Changes in Miso During Fermentation	127
XII. Changes in Physiological Functions During Fermentation	137
XIII. Forecast of the Role of Miso in the Future References	141 147
3. Industrialization of Sake Manufacture	149
<i>Kiyoshi Yoshizawa and Takeaki Ishikawa</i>	
Introduction	149
II. Production and Consumption	153
III. Manufacture of Sake	156
IV. Conclusion	187
References	188
4. Industrialization of Japanese Natto	193
<i>Kan Kiuchi and Sugio Watanabe</i>	
I. Introduction: Description and History of Natto	193
II. Production and Consumption	203
III. The Fermentation Process	204
IV. Materials Used for Traditional and Modern Natto Production	205
V. Modern Manufacturing Methods	205

VI.	Change from Traditional to Modern Manufacturing Process	218
VII.	Critical Steps in the Manufacture and Fermentation of Natto	223
VIII.	Important Problems in the Industrialization of Natto	224
IX.	Optimum Conditions for Fermentation	226
X.	Microbiology and Biotechnology	228
XI.	Other Aspects of the Microbiology of Natto	231
XII.	Chemical and Biochemical Changes During Fermentation	232
XIII.	Starter Cultures	235
	References	238
5	Tapai Processing in Malaysia: A Technology in Transition <i>Zahara Merican and Yeoh Quee-Lan</i>	247
	I. Description of Food	247
	II. Earliest Known Reference	248
	III. Substrates	249
	IV. Microflora in Tapai	249
	V. Starters	249
	VI. Microorganisms that Cause Spoilage	252
	VII. Traditional Methods of Preparation	253
	VIII. Preparation Method by Small Industry	254
	IX. Contrast Between Indigenous and Modern Processing	255
	X. Critical Steps in Processing Tapai	259
	XI. Major Problems in Industrialization	259
	XII. Optimum Fermentation Conditions	266
	XIII. Chemical/Biochemical Changes	267
	XIV. Changes in Nutritive Value	268
	References	269
6.	Industrialization of Africa's Indigenous Beer Brewing <i>Steven Haggblade and Wilhelm H. Holzapfel</i>	271
	I. Descriptive Profile of Sorghum, Millet, and Maize Beers	271
	II. Evolution of the Brewing Process	283
	III. Biochemistry and Microbiology of Brewing and Malting	326

IV	Prospects for the Future	348
	References	352
7.	Industrialization of Mageu Fermentation in South Africa <i>Wilhelm H. Holzapfel and Jeanne Leonie Taljaard</i>	363
	I. Introduction	363
	II. Contribution to the Diet	364
	III. Annual Production and Consumption	365
	IV. Historical Background	366
	V. Substrates	367
	VI. Mageu Production in Ancient Times and as a Cottage Industry	368
	VII. Industrial Production	369
	VIII. Indigenous Versus Modern Processing	382
	IX. Critical Steps in Manufacture/Fermentation	387
	X. Major Problems in Industrialization	388
	XI. Optimal Environmental Conditions for Fermentation	390
	XII. Essential Microorganisms for Fermentation	392
	XIII. Microorganisms that Cause Spoilage	395
	XIV. Chemical/Biochemical Changes in Substrates During Fermentation	397
	XV. Nutritive Value and General Composition of Mageu	400
	XVI. Future Role of Mageu as a Food	402
	XVII. Mageu Fermentation in the Future	404
	References	405
8.	Industrialization of Ogi Fermentation <i>O. O. Onyekwere, O. A. Koleoso, O. D. Teniola, and I. A. Akinrele</i>	409
	I. Introduction	409
	II. Consumption in the Diet	410
	III. Importance in the Diet	411
	IV. Total Production	412
	V. Earliest Known References	412
	VI. Substrates Used	413
	VII. Production in Ancient Times	413
	VIII. Cottage/Village Methods	417

IX.	Industrial/Commercial Ogi Production	
X.	Contrast Between Indigenous and Modern Processing	436
XI.	Critical Steps in Manufacture/Fermentation	438
XII.	Major Problems in Industrialization	442
XIII.	Optimal Environmental Conditions	444
XIV.	Microorganisms Essential to Fermentation	445
XV.	Microorganisms that Cause Spoilage	449
XVI.	Chemical/Biochemical Changes in the Substrate	451
XVII.	Nutritive Value Changes	457
XVIII.	Forecast	464
XIX.	Contribution to New International Industry	466
	References	466

^o Industrialization of Gari Fermentation

O. O. Onyekwere, O. A. Koleoso, I. A. Akinrele, and G. Heys

I.	Introduction	471
II.	Contribution to the Diet	474
III.	Per Capita Consumption	476
IV.	Early Reference to Gari	478
V.	Substrate	478
VI.	Production in Ancient Times	479
VII.	Production in Village/Cottage Industry	482
VIII.	Method of Consumption	483
IX.	Industrial/Commercial Production	487
X.	Nigerian Standard for Gari	504
XI.	Raw Materials Storage	506
XII.	Contrast between Indigenous and Modern Processing	508
XIII.	Critical Steps in Manufacture	511
XIV.	Major Problems in Industrialization	514
XV.	Optimum Environmental Conditions for Fermentation	515
XVI.	Microorganisms Essential for Fermentation	521
XVII.	Storage of Gari	523
XVIII.	Microorganisms that Cause Spoilage	525
XIX.	Chemical/Biochemical Changes in Substrate	528
XX.	Nutritive Value of Gari	533
XXI.	Forecast	540

XXII.	Contribution to New International Industries	541
	References	542
10.	Industrialization of Mexican Pulque	547
	<i>Juan F. Ramirez, A. Sanchez-Marroquin,</i>	
	<i>Mario M. Alvarez, and Ruud Valyasevi</i>	
	I. Description of Pulque	547
	II. Production and Consumption	549
	III. History of Fermentation: Earliest References	554
	IV. Outline of Essential Steps in Fermentation	556
	V. Indigenous Fermentation of Pulque Using Raw Materials in Ancient Times and Today	557
	VI. Modernization of Pulque Processing Methods	560
	VII. Changes from Indigenous to Modern Processing	563
	VIII. Critical Steps in Manufacture/Fermentation	564
	IX. Major Problems in Industrialization	565
	X. Microbiology and Biochemistry of Fermentation	567
	XI. Optimum Fermentation Conditions	569
	XII. Possible Spoilage Microorganisms	570
	XIII. Chemical and Biochemical Changes During Fermentation	571
	XIV. Starter Cultures	573
	XV. Effect of Processing on Nutritive Value	574
	XVI. Application of New Biotechnology and Genetic Engineering to Fermentation	577
	XVII. Forecast for Future Fermentation	580
	References	582
11	Industrialization of Tempe Fermentation	587
	<i>Kapti Rahayu Kuswanto</i>	
	I. Introduction	587
	II. Production and Consumption	588
	III. History of Tempe	593
	IV. Outline of Essential Steps in Fermentation	594
	V. Indigenous Processes: Raw Materials Used in Ancient Times and Today	
	VI. Modern Industrial and Commercial Processing Methods	

VII.	Changes from Indigenous to Modern Processing Methods	607
VIII.	Major Problems in Industrialization	620
IX.	Microbiology and Biochemistry of Fermentation	622
X.	Optimum Fermentation Conditions	624
XI.	Biochemical Changes During Fermentation	625
XII.	Starter Culture	628
XIII.	Effect of Processing on Nutritive Value	629
XIV.	Forecast for Future Fermentation	630
	References	631
12.	Tempe Production in Japan <i>Michio Kozaki</i>	
I.	Circumstances and Background of Tempe	637
II.	Starters for Tempe Production	638
III.	Tempe <i>Rhizopus</i> Is Derived from Hibiscus	639
IV.	Production of Tempe	641
V.	Nutrition and Secondary Processing of Tempe	643
VI.	Future of Tempe in Japan	644
	References	644
13	Industrialization of Thai Fish Sauce (Nam Pla) <i>Chakamas Wongkhalaung</i>	
I.	Introduction	647
II.	History	648
III.	Production and Consumption	649
IV.	Raw Materials	652
V.	Indigenous Process	655
VI.	Modern Industrial Processing	657
VII.	Microbiology	670
VIII.	Chemical and Biochemical Changes	675
IX.	Total Nitrogen and Amino Acids	676
X.	Color	683
XI.	Nutritional Quality and Safety	683
XII.	Classification and Standard of Fish Sauce	688
XIII.	Iodine Supplementation	689
XIV.	Histamine Formation	690
XV.	Research and Development	692

	XVI. Future Trends	698
	References	699
14.	Production of Thai Fermented Fish: Plara, Pla-som, Som-fak <i>Warawut Krusong</i>	707
	I. Plara	707
	II. Pla-som and Som-fak	711
	III. Quality of Thai Fermented Fish Products: Plara, Pla-som, and Som-fak	715
	IV. Microbial Aspects of Thai Fermented Fish Products: Plara, Pla-som, and Som-fak	716
	V. Nutrient Compositions of Thai Fermented Fish Products: Plara, Pla-som, and Som-fak	718
	References	718
15	Industrialization of Thai Nham: Fermented Pork or Beef <i>Warawut Krusong</i>	
	Historical Perspective	721
	II. Description	722
	III. Production	723
	IV. Production Process Flow	733
	V. How to Consume	734
	VI. Food Safety Aspects	734
	References	735
16.	Industrialization of Myanmar Fish Paste and Sauce Fermentation <i>Mvo Thant Tvn</i>	
	Introduction	737
	II. Production and Consumption	738
	III. History	739
	IV. Outline of Essential Steps in Ngapi Fermentation	740
	V. Indigenous Processes	742
	VI. Commercial Processing Methods	744
	VII. Major Problems in Industrialization	744
	VIII. Microbiology and Biochemistry of Fermentation	749
	IX. Harmful and Spoilage Microorganisms	754

Contents**xv**

X.	Essential Microorganisms for Fermentation	755
XI.	Standards of Ngapi and Nganpyaye	756
XII.	Conclusion	756
	Appendix: Standards for Ngapi and Nganpyaye	757
	References	759
17	Industrialization of Indigenous Fermented Food Processes: Biotechnological Aspects	763
	<i>Dianne R. Glenn and Peter L. Rogers</i>	
	I. Introduction	763
	II. Fermentation Kinetics	765
	III. Bioreactor Design	766
	IV. Process Control	770
	V. Scale-up	771
	VI. Prospects for Process Improvement	772
	VII. Conclusion	778
	References	778
