<b>List of contributors</b>	<b>xiii</b>
<b>Woodhead Publishing Series in Food Science, Technology and Nutrition</b>	<b>xv</b>
<b>Part One Fermented foods and health</b>	<b>1</b>
<b>1 Probiotic fermented foods and health promotion</b>	<b>3</b>
<i>A.C. Ouwehand, H. R�yti�</i>	
1.1 Introduction	3
1.2 Probiotic fermented foods and health promotion	3
1.3 Health benefits deriving from the consumption of probiotics	5
1.4 Gastrointestinal health	6
1.5 Immune health	9
1.6 Metabolic health	13
1.7 Summary	15
1.8 Future trends	15
1.9 Sources of further information and advice	16
References	16
<b>2 Exopolysaccharides from fermented dairy products and health promotion</b>	<b>23</b>
<i>A.D. Welman</i>	
2.1 Introduction	23
2.2 Exopolysaccharides (EPSs) from fermented dairy products	23
2.3 Interaction with the human intestinal microbiome	26
2.4 Interaction with the immune system	29
2.5 Interaction with enteric pathogens and toxins	31
2.6 Diverse interactions and potential health benefits	32
2.7 Conclusions	33
References	34
<b>3 Bioactive peptides from fermented foods and health promotion</b>	<b>39</b>
<i>A. Pihlanto, H. Korhonen</i>	
3.1 Introduction	39
3.2 Release of bioactive peptides during microbial fermentation	41
3.3 Bioactive peptides in fermented dairy and soy products	47
3.4 Bioactive peptides in health promotion	51
3.5 Conclusions and future trends	63
References	64

<b>4</b>	<b>Conjugated linoleic acid production in fermented foods</b>	<b>75</b>
	<i>J. Csapó, É. Varga-Visi</i>	
4.1	Introduction	75
4.2	Basic knowledge of conjugated linoleic acid (CLA)	75
4.3	CLA content of unprocessed food ingredients	78
4.4	Factors influencing the CLA content of raw materials, and the effect of animal diet on CLA content of milk and meat	80
4.5	CLA content of fermented food products	84
4.6	Health effects of CLA	90
4.7	Future trends	92
	References	93
<b>5</b>	<b>Effect of fermentation on the phytochemical contents and antioxidant properties of plant foods</b>	<b>107</b>
	<i>S.K. Yeo, J.A. Ewe</i>	
5.1	Introduction	107
5.2	Effect of fermentation on phytochemical profiles of plant foods and the bioavailability of nutrients	108
5.3	Effect of fermentation on antioxidant properties of plant foods	112
5.4	Health-promoting effects of fermented plant foods: a case of phytochemical and antioxidant property changes	115
5.5	Conclusions	118
	References	118
<b>6</b>	<b>Traditional cereal fermented foods as sources of functional microorganisms</b>	<b>123</b>
	<i>S.D. Todorov, W.H. Holzapfel</i>	
6.1	Introduction	123
6.2	Food fermentation processes	123
6.3	Antimicrobial proteins isolated from boza-related lactic acid bacteria	132
6.4	Fermented cereal-based food from Africa and Latin America	137
6.5	Starter cultures and cereal-based fermented food	141
6.6	Cereal-based probiotic foods	143
	Acknowledgements	146
	References	147
<b>Part Two</b>	<b>Fermentation microbiology</b>	<b>155</b>
<b>7</b>	<b>Advanced methods for the identification, enumeration, and characterization of microorganisms in fermented foods</b>	<b>157</b>
	<i>P. Dolci, V. Alessandria, K. Rantsiou, L. Cocolin</i>	
7.1	The fermented food microbial ecosystem	157
7.2	Culture-dependent methods	158
7.3	Culture-independent methods: diversity in microbial communities	161

---

7.4	Culture-independent methods: metabolic activity in microbial communities	166
7.5	Recent insights: pyrosequencing	168
7.6	Conclusions	169
	References	169
<b>8</b>	<b>Systems biology and metabolic engineering of lactic acid bacteria for improved fermented foods</b>	<b>177</b>
	<i>N.A.L. Flahaut, W.M. de Vos</i>	
8.1	Introduction	177
8.2	Metabolic engineering in industrial lactic acid bacteria (LAB)	178
8.3	Systems biology and metabolic engineering in LAB	184
8.4	Conclusions	190
8.5	Sources of further information and advice	191
	References	191
<b>9</b>	<b>Designing wine yeast for the future</b>	<b>197</b>
	<i>I.S. Pretorius, C.D. Curtin, P.J. Chambers</i>	
9.1	Introduction	197
9.2	Accidental beginnings and ancient wisdom	198
9.3	Turning hindsight into foresight	198
9.4	The ancient art of winemaking meets frontier yeast science	203
9.5	Engineering yeast to make better wine	211
9.6	Future trends	221
	Acknowledgments	222
	References	223
<b>10</b>	<b>Modern approaches for isolation, selection, and improvement of bacterial strains for fermentation applications</b>	<b>227</b>
	<i>E. Johansen, G. Øregaard, K.I. Sørensen, P.M.F. Derkx</i>	
10.1	Introduction	227
10.2	Screening of strain collections	229
10.3	Classical strain improvement	237
10.4	Future trends	244
10.5	Sources of further information and advice	245
	Acknowledgments	245
	References	245
<b>11</b>	<b>Advances in starter culture technology: focus on drying processes</b>	<b>249</b>
	<i>P. Foerst, C. Santivarangkna</i>	
11.1	Introduction	249
11.2	Protective agents	250
11.3	Starter culture fermentation process	251
11.4	Freeze drying for the production of dried starter cultures	253

11.5	Spray drying for the production of dried starter cultures	257
11.6	Vacuum drying for the production of dried starter cultures	259
11.7	Product characteristics and storage stability	261
11.8	Conclusion	264
	References	265
<b>Part Three Quality and safety of fermented foods</b>		<b>271</b>
<b>12</b>	<b>Controlling the formation of biogenic amines in fermented foods</b>	<b>273</b>
	<i>M.L. Mohedano, P. López, G. Spano, P. Russo</i>	
12.1	Introduction	273
12.2	Molecular determinants of biogenic amine formation	275
12.3	Environmental factors involved in the production of biogenic amines	279
12.4	Techniques for the detection of biogenic amine-producing bacteria	287
12.5	Techniques for the detection of biogenic amines	288
12.6	Future trends	291
12.7	Legislation concerning biogenic amine content in food	295
12.8	Sources of further information and advice	297
	References	297
<b>13</b>	<b>Biopreservation effects in fermented foods</b>	<b>311</b>
	<i>A. Corsetti, G. Perpetuini, R. Tofalo</i>	
13.1	Preservation and biopreservation	311
13.2	Biopreservative effect of lactic and acetic acids	312
13.3	Biopreservative effect of phenyllactic acid	315
13.4	Biopreservative effect of diacetyl	317
13.5	Biopreservative effect of cyclic dipeptides (2,5-diketopiperazines)	319
13.6	Biopreservative effect of bacteriocins	321
13.7	Biopreservative effect of other compounds	325
13.8	Conclusions	327
	References	327
<b>14</b>	<b>Lactic acid bacteria as antifungal agents</b>	<b>333</b>
	<i>A. Bianchini</i>	
14.1	Introduction	333
14.2	Natural antifungal compounds produced by lactic acid bacteria	334
14.3	Factors affecting production of antifungal compounds by lactic acid bacteria	340
14.4	Potential applications of lactic acid bacteria as antifungal compounds	341
14.5	Lactic acid bacteria and mycotoxins	343
	References	347

<b>Part Four Particular products, and approaches towards quality improvement and fermentation control</b>	<b>355</b>
<b>15 Quality improvement and fermentation control in meat products</b>	<b>357</b>
<i>F.-K. Lücke</i>	
15.1 Introduction	357
15.2 Types of fermented meats	358
15.3 Principles of manufacture of fermented meats	360
15.4 Microbiological and chemical changes during meat fermentation	363
15.5 Starter cultures	364
15.6 Microbiological safety	366
15.7 Recent and future trends	368
15.8 Sources of further information and advice	371
References	371
<b>16 Quality improvement and fermentation control in fish products</b>	<b>377</b>
<i>T. Kuda</i>	
16.1 Introduction	377
16.2 Salted and fermented fish products	379
16.3 <i>Narezushi</i>	384
16.4 Functionality of lactic-acid fermented fish foods	388
References	389
<b>17 Quality improvement and fermentation control in dough fermentations</b>	<b>391</b>
<i>M.J. Brandt</i>	
17.1 Introduction	391
17.2 Advances in understanding of microbiota and physiology	391
17.3 Physiology and its impact on bread quality	395
17.4 Developments in use of starter cultures	396
17.5 Quality and safety issues	398
17.6 Health benefits	400
17.7 Future trends	402
References	402
<b>18 Quality, safety, biofunctionality and fermentation control in soya</b>	<b>409</b>
<i>R. Nout</i>	
18.1 Introduction	409
18.2 Fermented soya products	409
18.3 Quality and food safety aspects	419
18.4 Biofunctionality and health aspects	422
18.5 Future trends and research needs	428
18.6 Sources of further information and advice	428
References	429

<b>19</b>	<b>The microbial dynamics of wine fermentation</b>	<b>435</b>
	<i>L.F. Bisson, G.A. Walker</i>	
19.1	Introduction	435
19.2	Overview of the winemaking process: from vineyard to bottle	436
19.3	Pre-fermentation microbiota	439
19.4	Fermentation microbiota	442
19.5	Post-fermentation microbiota	443
19.6	Methods of diversity assessment	448
19.7	Factors impacting the presence and persistence of microbes	450
19.8	Dynamics of yeast during the primary fermentation phase	451
19.9	Advances in understanding yeast fermentation physiology	456
19.10	Future trends	461
19.11	Sources of further information and advice	462
	References	462
<b>20</b>	<b>Quality improvement and fermentation control in beer</b>	<b>477</b>
	<i>L. Kyselová, T. Brányik</i>	
20.1	Introduction	477
20.2	Genetic improvement of brewer's yeast	479
20.3	Anaerobic beer contaminants	482
20.4	New trends in fermentation	483
20.5	New products: finding profitable niches	489
20.6	Beer in relation to nutrition and health	492
20.7	Future trends	495
	Acknowledgement	495
	References	496
<b>21</b>	<b>Coffee: fermentation and microbiota</b>	<b>501</b>
	<i>M. Huch, C.M.A.P. Franz</i>	
21.1	Introduction	501
21.2	Coffee processing	502
21.3	The microbiology of coffee fermentation	505
21.4	Towards the use of starter cultures to optimize fermentation	508
21.5	Mycotoxin production	509
21.6	Conclusion	510
	References	511
<b>22</b>	<b>Quality improvement and fermentation control in vegetables</b>	<b>515</b>
	<i>H.J. Buckenhueskes</i>	
22.1	Introduction	515
22.2	History and present product range	515
22.3	Food fermentations: complex networks	517
22.4	Technological factors	518
22.5	Ingredients and additives	523
22.6	Microbiology of fermentation	525

---

22.7	Faulty products and spoilage	531
22.8	Kimchi	534
22.9	Future trends	535
	References	535
