Woodhead Publishing Series in Food Science, Technology and Nutrition	ix
Preface	xxi
Introduction	xxiii
 Part One Microbiological hazards and process control	 1
1 Microbiology of canned foods	3
1.1 Introduction	3
1.2 Key micro-organisms in food microbiology	4
1.3 Controlling the growth of micro-organisms	7
1.4 Important fungi in the food industry	15
1.5 Important bacteria in the food industry	17
1.6 Botulism	21
References	25
2 Spoilage of canned foods	27
2.1 Introduction	27
2.2 Types of spoilage of canned foods	29
2.3 Sources of contamination	34
2.4 Spoilage of canned vegetables	40
2.5 Microbiological standards for ingredients	41
References	42
3 Heat penetration determinations and thermal process calculations	43
3.1 Introduction	43
3.2 pH classification of canned foods	44
3.3 Thermal death time	46
3.4 HTST processing	47
3.5 Inoculated pack studies	48
3.6 HP determinations	49
3.7 Process establishment methods	51
3.8 Process calculation methods	52
3.9 Some causes of unreliable heat penetration data	55
3.10 HTST: a special type of heat penetration test	56
3.11 Summary	57
References	58

4	Optimising retort operations for canned goods	59
4.1	Introduction	59
4.2	Optimising the thermal process to reduce overprocessing	60
4.3	Changing the processing regime from low-acid sterilisation to pasteurisation	63
4.4	New thermal technologies	67
4.5	Converting batch processes to continuous processing	68
4.6	Summary	70
	References	71
Part Two	Containers and ingredients	73
5	Metal containers for canned foods	75
5.1	Introduction	75
5.2	Types of cans	75
5.3	Can manufacture	77
5.4	Can lacquers	81
5.5	Tinplate can corrosion	86
5.6	Corrosion attributable to canning practices	89
5.7	Corrosion attributable to storage conditions	93
5.8	Can seam inspection	95
5.9	Storage and shipping of cans	112
5.10	Aluminium cans	113
5.11	Conclusion	116
	Reference	117
6	Glass and plastic containers for canned foods	119
6.1	Introduction	119
6.2	Vacuum closures for glass – general characteristics	119
6.3	Factors effecting vacuum formation	119
6.4	‘Cold-water vacuum check’ method	120
6.5	Vacuum closure application for glass containers	121
6.6	Auxiliary equipment	121
6.7	Closures for glass containers	121
6.8	Vacuum sealing	122
6.9	Coding	123
6.10	Processing glass containers	124
6.11	Packaging of food in plastic containers	125
6.12	Food contact and migration	125
6.13	Choice of plastic container	126
6.14	Sealing techniques	134
6.15	Warehousing and transportation	135
6.16	Plastic package recycle potential	135
6.17	Conclusion	136
	Reference	136

7	Retortable flexible containers for food packaging	137
7.1	Introduction	137
7.2	Structure of flexible containers	138
7.3	Retort pouch manufacture	139
7.4	Quality assurance in retort pouch manufacture	140
7.5	Filling	141
7.6	Sealing	141
7.7	Processing/sterilization	141
7.8	Quality control tests for pouch laminate, pouch, and semirigid containers	143
7.9	Advantages of using retortable flexible containers	145
7.10	The disadvantages of flexible containers	145
	References	146
8	Ingredients used in the preparation of canned foods	147
8.1	Introduction	147
8.2	Food additives	147
8.3	Salt, salt tablets, and combination tablets in canning	150
8.4	Carbohydrates in canning and preserving	154
8.5	Spices, essential oils, and oleoresins	168
8.6	Textured vegetable proteins	172
8.7	Monosodium glutamate	174
8.8	Water-soluble gums (hydrocolloids)	176
8.9	Emulsifiers (surfactants)	192
8.10	Colour additives	193
8.11	Preservatives	198
8.12	Acidulants	203
8.13	Firming agents	207
8.14	Alternative sweeteners and fat replacers	208
	References	211
Part Three	Safety and quality	213
9	Hazard analysis and critical control point (HACCP) systems in food canning	215
9.1	Introduction	215
9.2	The NACMCF summary of the HACCP system	216
	Appendix A. Examples of questions to be considered in a hazard analysis	228
	Appendix B (N.B. Appendix B was extracted from Committee's November 1989 HACCP document.)	230
	Appendix C	232
	Appendix D. Examples of HACCP records	233
	Appendix E. Examples of verification activities	233
	Recommended reading	234

10 In-plant quality control in food canning operations	235
10.1 Introduction	235
10.2 Quality control department	235
10.3 Control of factory operations	238
10.4 Examination of line samples	242
10.5 Examination of water	242
10.6 Testing canned foods	243
10.7 Purchasing raw products for canning	251
10.8 The past and future of quality control	252
Recommended reading	254
 11 Dealing with consumer complaints and market recalls in food canning	 255
11.1 Introduction	255
11.2 Recording complaints	256
11.3 Responding to complaints	256
11.4 Product tampering	257
11.5 Traceability	258
11.6 Product recalls	258
11.7 Sample forms	266
Recommended reading	272
 Appendix	 273
Glossary	299
Index	333
