

TABLE OF CONTENTS

Introduction	9
Reviews	10
Physical Mechanism of Freeze-Drying	10
Sharpness of the Frozen Front	11
Evidence for a Diffuse Sublimation Front	11
Evidence for a Sharp Sublimation Front	13
Drying Rates	18
Pertinent Factors	18
External Heat and Mass Transfer Coefficients	21
Internal Heat and Mass Transfer Coefficients-The Uniformly Retreating Ice Front (URIF) Model	21
Thermal Conductivities	25
Internal Mass Transport	29
Frozen Liquid Foods	32
Terminal Drying Rates	34
Influence of Freezing Conditions	35
Quality Factors as Influenced by Processing Conditions	40
Aroma Retention	40
Physical and Chemical State of Water in Frozen and Freeze-Dried Foodstuffs	46
Deteriorative Chemical and Biochemical Reactions during Drying and Storage	47
Shrinkage	51
Rehydration Ratio	53
Drip- or Water-Holding Capacity	53
Optimal Residual Water Content	53
Processing Approaches	54
Market and Production Status	54
Processing Problems	54
Conventional Plants	55
Continuous Processes	55
Water Vapor Removal and Vacuum Systems	56
Conductive Heat Supply	57
Freeze-Drying at Higher Pressures	58
Microwave Heating	65
Heating with Infrared Radiation	68
Freeze-Drying of Liquid Foodstuffs	68
Pre-Concentration	70
Quality Control	70
Piece-to-Piece Scatter	70
Maintenance of Maximum Rate of Freeze-Drying	71
End Point Determination	72

Additional Developments	72
Reviews	72
Non-Food Uses	72
Physical Properties	72
Freezing Conditions	73
Aroma Retention	73
Processing Approaches	75
Freeze-Drying of Foamed Material	75
Additives to Improve Freeze-Drying	75
Compressed Foods	76
Acknowledgment	76
