

CONTENTS

SESSION I (Chairman: J.P. DE LEIRIS)

1. Mass Transfer and Permeability	1
2. Study of some Factors Affecting Permeability	7
3. Permeability of Polymers in Food Packaging	25
4. Interaction Between Food and Packaging Materials and its Consequence on Migration	39

SESSION II (Chairman: PROFESSOR M. LONCIN)

5. The Influence of Water Content and Water Activity on Chemical Changes in Foods of Low Moisture Content under Packaging Aspects	67
6. Microbiological Consequences of Mass Transfer	93
7. Modelling of Gas and Vapour Transport Through Hydrophilic Films	115

SESSION III (Chairman: PROFESSOR K. EICHNER)

8. Water Interactions and Food Preservation	137
9. Food Microbiology and Water Activity	165
10. Modalities of Enzyme Activities in Low Moisture Media	181

SESSION IV (Chairman: DR R. DRAPRON)

11. Activity and Stability of Enzymes in Complex Media	199
12. Water Activity and Permeability	213
13. The Influence of Light Transmittance and Gas Permeability of Various Packing Materials on the Quality of Whole Natural Yoghurt during Storage	235

SESSION V (Chairman: DR M. MATHLOUTHI)

14. FTIR Studies of Polymer Films, Surfaces and Interfaces	271
15. Orientation and Properties of Some Polymers Used in the Foodstuffs Packaging Industry	283
16. Influence of the Packaging Material and the Nature of the Packed Goods on the Loss of Volatile Organic Compounds: Permeation of Aroma Components	325

SESSION VI (Chairman: PROFESSOR J.L. KOENIG)

17. Relationship Between Packaging Machine and Packaging Material	341
18. Packing and Food Quality: Role of Sensory Evaluation	359
19. Technology and Application of Edible Protective Films	371
Index	395
