<b>Part I Optimising thermal processes</b> .....	1
<b>1 Optimising the safety and quality of thermally processed packaged foods</b> .....	3
<i>S. D. Holdsworth, formerly Campden and Chorleywood Food Research Association, UK</i>	
1.1 Introduction: reconciling safety and quality .....	3
1.2 The kinetics of microbial inactivation during heat treatment .	4
1.3 Setting safe limits for sterilisation and pasteurisation processes .....	9
1.4 Setting thermal process parameters to maximise product quality: C-values .....	17
1.5 Optimising thermal process conditions for product safety and quality .....	21
1.6 Future trends .....	26
1.7 Sources of further information and advice .....	27
1.8 References .....	27
<b>2 Optimising the efficiency and productivity of thermal processing</b> .....	32
<i>J. C. Oliveira, University College Cork, Ireland</i>	
2.1 Introduction: the role of thermal processing in extending shelf-life .....	32

2.2	Setting commercial objectives for thermal processes: process optimisation .....	36
2.3	Assessing the potential of in-container, aseptic and HTST processing .....	38
2.4	Techniques for optimising the efficiency of thermal processes .....	41
2.5	Future trends .....	45
2.6	References .....	47
<b>3</b>	<b>Optimising the efficiency of batch processing with retort systems in thermal processing .....</b>	<b>50</b>
	<i>R. Simpson, Universidad Tecnica Federico Santa Maria, Chile</i>	
3.1	Introduction: batch processing in food canning plants .....	50
3.2	Criteria for optimal design and operation of batch processing .....	53
3.3	Optimising energy consumption .....	54
3.4	Optimising retort scheduling .....	62
3.5	Maximising net present value of capital investment for batch processing .....	65
3.6	Simultaneous processing of different product lots in the same retort .....	71
3.7	Conclusion .....	76
3.8	List of symbols .....	77
3.9	References .....	79
<b>4</b>	<b>Using computational fluid dynamics to optimise thermal processes .....</b>	<b>82</b>
	<i>P. Verboven, J. de Baerdemaeker and B. M. Nicolai, Katholieke Universiteit Leuven, Belgium</i>	
4.1	Introduction: computational fluid dynamics and the importance of fluid flow in thermal processes .....	82
4.2	Measurement and simulation of fluid flow in thermal processes .....	84
4.3	Using computational fluid dynamics (CFD) to analyse thermal processes .....	85
4.4	Improving thermal food processes by CFD: packaged foods, heat exchangers and ovens .....	94
4.5	Future trends .....	97
4.6	Sources of further information and advice .....	99
4.7	References .....	100

<b>Part II</b>	<b>Developments in technologies for sterilisation and pasteurisation</b>	103
<b>5</b>	<b>Modelling and optimising retort temperature control</b>	105
	<i>G. Bown</i>	
5.1	Introduction	105
5.2	Factors affecting thermal process control	106
5.3	Modelling techniques for predicting lethal heat	109
5.4	On-line process control of retort temperature	114
5.5	Achieving lethality using the pre-heating and cooling phases of the retort cycle	118
5.6	Future trends	120
5.7	Sources of further information and advice	121
5.8	Glossary of terms	121
5.9	References	122
<b>6</b>	<b>Improving rotary thermal processing</b>	124
	<i>G. S. Tucker, Campden and Chorleywood Food Research Association. UK</i>	
6.1	Introduction: the use of rotation for batch thermal processing	124
6.2	The effectiveness of rotation in improving heat transfer	125
6.3	Optimising mixing during rotation to improve heating rates	127
6.4	Testing changes in rotation rate to improve heat transfer	131
6.5	Optimising rotation speeds in thermal processing	133
6.6	Future trends	135
6.7	Sources of further information and advice	136
6.8	References	136
<b>7</b>	<b>Developments in packaging formats for retort processing</b>	138
	<i>N. May. Campden and Chorleywood Food Research Association. UK</i>	
7.1	Introduction: requirements for low- and high-acid foods	138
7.2	Developments in packaging formats: the metal can	141
7.3	Developments in packaging formats: the plastic can, pot and bottle	144
7.4	Retort pouches: construction, sealing, processing and packaging	145
7.5	Methods of improving glass packaging	150
7.6	Future trends	150
7.7	Sources of further information and advice	151
7.8	References	151
<b>8</b>	<b>Developments in cook-chill and sous vide processing</b>	152
	<i>S. Ghazala. Memorial University of Newfoundland, Canada</i>	
8.1	Introduction: sous vide, cook-chill and home-meal-replacement technologies	152

8.2	The pasteurization process .....	153
8.3	Cook-chill systems: process stages .....	154
8.4	The sous vide system: process stages .....	157
8.5	Advantages and disadvantages of cook-chill and sous vide systems .....	160
8.6	Requirements for cook-chill and sous vide processes .....	164
8.7	Microbial safety and barrier technology for cook-chill and sous vide processing .....	168
8.8	Good manufacturing practices and HACCP planning for safe cook-chill and sous vide processing .....	171
8.9	Conclusions .....	172
8.10	References .....	173
<b>Part 111 Developments in continuous heat processing .....</b>		<b>175</b>
<b>9 Developments in aseptic processing .....</b>		<b>177</b>
<i>K. P. Sandeep, J. Simunovic and K. R. Swartzel, North Carolina State University, USA</i>		
9.1	Introduction: key issues in aseptic processing .....	177
9.2	Components of an aseptic processing system .....	178
9.3	Equipment sterilization and process validation .....	180
9.4	Recent developments in aseptic processing .....	182
9.5	Future trends .....	184
9.6	Abbreviations .....	186
9.7	References .....	186
<b>10 Developments in tubular heat exchangers .....</b>		<b>188</b>
<i>G. S. Tucker, Campden and Chorleywood Food Research Association, UK and U. Bolmstedt, Tetra Pak Processing Components AB, Sweden</i>		
10.1	Introduction: applications of traditional tubular heat exchangers .....	188
10.2	Improving exchanger design: product flow behaviour .....	188
10.3	Selecting the right type of tubular heat exchanger .....	192
10.4	Heat transfer efficiency in tubular heat exchangers .....	196
10.5	Emerging designs and future trends .....	199
10.6	Sources of further information and advice .....	202
10.7	References .....	202
<b>11 Optimising plate heat exchanger design and operation .....</b>		<b>203</b>
<i>L. Wang and B. Sundén, Lund Institute of Technology, Sweden</i>		
11.1	Introduction: plate heat exchangers (PHEs) .....	203
11.2	Types of plate heat exchanger .....	205
11.3	Application of plate heat exchangers in food processing: pasteurisation and evaporation .....	208

11.4	Improving the design of plate heat exchangers: modelling pressure and heat transfer .....	211
11.5	Future trends .....	218
11.6	Conclusions .....	219
11.7	Sources of further information and advice .....	220
11.8	List of symbols .....	221
11.9	References .....	222
<b>12</b>	<b>Developments in ohmic heating .....</b>	<b>224</b>
	<i>R. Ruan, X. Ye and P. Chen, University of Minnesota, USA and C. Doona and T. Yang, US Army Natick Soldier System Center, USA</i>	
12.1	Introduction: ohmic heating principles and technology .....	224
12.2	Ohmic heating engineering: design and process control .....	228
12.3	Invasive and non-invasive methods of monitoring ohmic heating .....	231
12.4	Modelling ohmic heating .....	237
12.5	Future trends .....	246
12.6	Sources of further information .....	250
12.7	References .....	250
<b>13</b>	<b>Air impingement heating .....</b>	<b>253</b>
	<i>A. Sarkar and R. P. Singh, University of California – Davis, USA</i>	
13.1	Introduction: air impingement processing .....	253
13.2	Air impingement processing of food products: principles ....	254
13.3	Heat transfer measurements and characteristics in impingement systems .....	257
13.4	Design and use of air impingement systems in the food industry .....	263
13.5	Modeling and optimizing air impingement systems .....	267
13.6	Future trends .....	270
13.7	List of symbols .....	273
13.8	References .....	274
<b>14</b>	<b>Laser-based packaging sterilisation in aseptic processing .....</b>	<b>277</b>
	<i>K. Warriner, University of Guelph, Canada and S. Movahedi and W. M. Waites, University of Nottingham. UK</i>	
14.1	Introduction: limitations in current sterilisation methods for aseptic carton packaging .....	277
14.2	The principles of laser operation .....	280
14.3	Assessing and validating spore inactivation by UV light ....	281
14.4	Application of W-laser light in package sterilisation .....	289
14.5	Optimising UV-laser sterilisation of cartons: optical and other novel systems .....	293
14.6	Future trends .....	297
14.7	Sources of further information and advice .....	298
14.8	References .....	299

<b>Part IV Improving validation of thermal processes</b> .....	305
<b>15 Modelling heat penetration curves in thermal processes</b> .....	307
<i>F. Eszes and R. Rajko, University of Szeged, Hungary</i>	
15.1 Introduction: assessing boundary conditions for heat treatment .....	307
15.2 Determining thermal diffusivity .....	315
15.3 Determining surface heat transfer coefficients .....	319
15.4 Increasing the accuracy of the parameters determined from heat treatment penetration curves .....	321
15.5 Future trends .....	330
15.6 Acknowledgement .....	331
15.7 References .....	331
<b>16 Validation of heat processes: an overview</b> .....	334
<i>G. S. Tucker, Campden and Chorleywood Food Research Association, UK</i>	
16.1 Introduction: the need for better measurement and control ...	334
16.2 Validation methods: objectives and principles .....	335
16.3 Validation based on temperature measurement .....	338
16.4 Validation based on microbiological methods .....	343
16.5 Validation based on biochemical time-temperature integrators .....	344
16.6 Future trends .....	349
16.7 Sources of further information and advice .....	350
16.8 References .....	351
<b>17 The use of data loggers to validate thermal processes</b> .....	353
<i>G. H. Shaw, Campden and Chorleywood Food Research Association, UK</i>	
17.1 Introduction: the role of data loggers in validating thermal processes .....	353
17.2 Types of data logger .....	354
17.3 Using data loggers to measure thermal processes .....	355
17.4 Using data loggers to validate thermal processes .....	360
17.5 Future trends .....	362
17.6 Acknowledgements .....	363
17.7 References and further reading .....	363
<b>18 The use of time-temperature integrators (TTIs) to validate thermal processes</b> .....	365
<i>A. Van Loey, Y. Guivarc'h, W. Claeys and M. Hendrickx, Katholieke Universiteit Leuven, Belgium</i>	
18.1 Introduction: the importance of TTIs .....	365
18.2 The principles of TTIs .....	366

18.3	Application of TTIs to measure thermal processes .....	367
18.4	Strengths and weaknesses of TTIs .....	373
18.5	Future trends .....	377
18.6	Sources of further information and advice .....	379
18.7	References .....	379
<b>19</b>	<b>New techniques for measuring and validating thermal processes .....</b>	<b>385</b>
	<i>K. P. Nott and L. D. Hall. University of Cambridge. UK</i>	
19.1	Introduction: limitations of current temperature measurement .....	385
19.2	Minimal and non-invasive measurement techniques .....	386
19.3	Magnetic resonance imaging: principles, measurements and processing .....	391
19.4	Future trends .....	399
19.5	Sources of further information and advice .....	400
19.6	References .....	403
<b>Part V</b>	<b>Analysing microbial inactivation in thermal processing</b>	<b>409</b>
<b>20</b>	<b>Analyzing the effectiveness of microbial inactivation in thermal processing .....</b>	<b>411</b>
	<i>M. Peleg. University of Massachusetts at Amherst. USA</i>	
20.1	Introduction: microbial heat inactivation .....	411
20.2	Survival curves, the Weibull distribution function and heat resistance .....	413
20.3	Analyzing the survival ratio dependence on temperature .....	416
20.4	Simulating heating and cooling curves .....	417
20.5	Applications of survival patterns in food processing .....	421
20.6	Conclusion .....	423
20.7	References .....	425
<b>21</b>	<b>Evaluating microbial inactivation models for thermal processing .....</b>	<b>427</b>
	<i>A. H. Geeraerd. V. P. Valdramidis. K. Bernaerts and J. F. Van Impe. Katholieke Universiteit Leuven. Belgium</i>	
21.1	Introduction .....	427
21.2	Description of primary models of inactivation .....	428
21.3	Dynamic inactivation models .....	431
21.4	Static inactivation models .....	434
21.5	Description of secondary models of inactivation .....	437
21.6	Modelling the interaction between micro-organisms, food and heat treatment .....	440
21.7	Future trends .....	448
21.8	Acknowledgements .....	449
21.9	References .....	449

<b>22 Identifying and dealing with heat-resistant bacteria</b> .....	454
<i>J. T. Rosnes, Norconsew, Norway</i>	
22.1 Introduction: the problem of heat-resistant bacteria .....	454
22.2 Heat-resistant bacteria and their growth potential .....	454
22.3 Types of heat-resistant microorganisms .....	458
22.4 The thermal inactivation kinetics of bacterial spores .....	460
22.5 New thermal inactivation processes: microwaves, radio frequency and high-pressure processing .....	466
22.6 Identifying heat-resistant bacteria .....	468
22.7 Sources of further information and advice .....	470
22.8 References .....	471
<b>Part VI Appendix</b> .....	479
<b>23 Optimising the thermal processing of liquids containing solid particulates</b> .....	481
<i>N. Heppell, Oxford Brookes University, UK</i>	
23.1 Introduction: problems with heating liquids containing solid particulates .....	481
23.2 Residence time distribution of solid particulates and liquid phase .....	482
23.3 Liquid-particulate heat transfer .....	484
23.4 Measurement of the overall thermal treatment received: time-temperature integrators (TTIs) .....	487
23.5 Optimising heat transfer .....	488
23.6 Conclusions and future trends .....	490
23.7 Sources of further information and advice .....	491
23.8 References .....	491
<b>Index</b> .....	493
