

## Table of Contents

<b>Chapter 1 - Introduction</b>	<b>1</b>
Microbiological Evaluation	2
The Package	2
<b>Chapter 2 – Design of the Aseptic Processing System</b>	<b>3</b>
Overview and Historical Perspective	3
Characteristics of Specific Elements	5
Flow Control	5
Product Heating and Cooling	6
Direct Heating/Cooling	6
Indirect Heating/Cooling	8
Hold Tube	10
Back Pressure	12
Deaerators	12
Aseptic Surge Tank	13
Aseptic Process Design Overview	13
Thermobacteriology	14
Quality Assessment	16
Fluid Flow and Velocity Distribution	17
Types of Fluids	17
Laminar and Turbulent Flow	18
Reynolds Number	19
Heat Transfer System Design	20
Thermal Process Calculation	23
Example Process Calculations	24
Processing Particulate Foods	25
Continuous Flow Microwave Heating for Aseptic Processing	27
Thermal Process Control	28
Summary	28
References	28
<b>Chapter 3 - Residence Time Distribution in Aseptic Processing</b>	<b>31</b>
Mean Residence Time	32
F(t) Curves for Various Flow Patterns	32
Laminar Flow	32
Plug Flow	33
Continuous Stirred Tank Reactor	33
Channeling	33
Dead Space	33
E(t) Curve	34
E(t) Curves for Various Types of Flows	34
Laminar Flow	34
Plug Flow	34
CSTR	34
Channeling	34
Dead Space	35

Reduced Time	35
Comparison Between E(t) and F(t) Curves	36
Statistical Considerations	39
Flow Characteristics in Selected Heat Exchangers	40
Tubular Heat Exchangers	40
Plate Heat Exchangers	41
Scraped-surface Heat Exchangers	41
Residence Time Distribution in Processing of Heterogeneous Foods	41
Scraped-surface Heat Exchanger	42
Holding Tube	43
References	44

**Chapter 4 - Microbiology of Aseptically Processed and Packaged Foods** **47**

Food Safety and Microbial Food Spoilage	48
Types of Microorganisms	48
Bacteria and Bacterial Spores	48
Yeasts	49
Molds	49
Source of Microorganisms	49
Growth of Microorganisms	50
Food	50
Low-acid, Acidified, and High-acid Foods	52
Destruction and Removal of Microorganisms	53
D-value	54
The z-value	55
F <sub>0</sub> value	59
Heat Resistance of <i>Alicyclobacillus</i> in Aseptic Fruit Juice	59
Foods Containing Particulates and Thermal Processing Considerations	60
Treatment of the Equipment, Processing Environment, and Packages	60
Sanitation of Processing Equipment	61
Sterilization of Processing Equipment and Packages	64
Validation of Commercial Sterility for the Processing System and Packaging System	65
Microbial Challenge Testing	66
Regulations of Low-acid and Acidified Foods	66
Food Safety and Food Quality Management Programs	67
References	70

**Chapter 5 - Chemistry of Aseptically Processed Foods** **75**

Activation Energy	75
Accelerating Chemical Reactions	75
Determining Activation Energies	76
Interpreting Activation Energies	78
Chemical Changes in Aseptically Processed Foods	82
Enzyme Action	83
Protein Structure	83
Enzyme Regeneration	84
Age Gelation	85
Browning Reactions	87

Enzymatic Browning	87
Nonenzymatic Browning	87
Maillard Browning	88
Ascorbic Acid Browning	90
Lipid Browning	90
Comparison of Browning Types	90
Problems Associated with Oxygen	91
Uniqueness of Aseptic Processing	91
Sources of Oxygen	91
Oxygen Diffusion and Permeation	91
Methods of Measurement	92
Ways to Reduce Oxidative Browning	92
Nutritional and Flavor Changes	93
Changes in Natural Pigments	94
Techniques to Measure Chemical Changes	94
Shelf Life	95
Acknowledgments	95
References	95

## **Chapter 6 - Aseptic Packaging Technology** **101**

History of Aseptic Packaging	101
Packaging Functions and Objectives	102
Package Development	102
Food Product Characteristics and Properties	104
Environmental, Transportation, and Distribution Hazards Information	104
Market Information	105
Packaging Information	105
Total Systems Approach	106
Packaging Materials for Aseptically Processed Foods	106
Properties of Polymeric Packaging Materials	106
Gas and Water-vapor Barrier Properties	106
Mechanical Properties	109
Thermal Stability and Sealing Properties	113
Chemical Properties	113
Light/UV Protective Properties	114
Composite Multilayer Structures	114
Selection of Appropriate Packaging Materials	116
Packages for Aseptically Processed Foods	117
Package Formation Methods	117
Package Types and Characteristics	120
Aseptic Packaging Systems	123
Package Integrity Issues	124
Selection of an Aseptic Packaging System	125
Future Trends for Aseptic Packaging	128
Acknowledgments	129
References	129

## **Chapter 7 - Establishing the Aseptic Processing and Packaging Operation 135**

Product Sterilization Equipment	136
Influence of Product on Equipment Selection	136
Determining and Controlling Product Flow Rate	136
Monitors and Controls	137
Processing System Sterilization	138
Maintenance of Sterility	138
Establishing the Scheduled Process	139
Identification of Critical Factors	139
Calculating the Thermal Process	140
Process Confirmation	141
Aseptic Packaging Systems	142
System Descriptions	142
Critical Factors	143
Biological Testing	143
Aseptic Package Integrity	144
Preproduction Inspection	145
Based Material Quality	146
Hold for Investigation (HFI) Procedures	146
Action for Specification Deviations	146
Determination of HFI Quantity	146
Determination of Disposition of HFI Packages	146
Packaging Machinery	146
Sampling Procedures	146
Production Line Inspections—Visual	147
Procedures for Visual Inspection of Aseptic Packages	147
Teardown Procedures for Paperboard Packages	147
Teardown Procedures for Flexible Pouches	148
Peel Test Procedures for Form, Fill, and Seal Containers	148
Test Methods for Package Integrity	148
References	149

## **Chapter 8 - Federal Regulation of Aseptic Processing and Packaging 151**

FDA Regulations	151
Better Process Control Schools	151
Processing Authority	152
Process Establishment and Process Filing	152
Conservative Nature of the FDA	153
Package Sterilants	154
Grade A Pasteurized Milk Ordinance Requirements	154
USDA Regulations	154
Conclusion	155

## **Chapter 9 – Glossary of Terms 157**
