| | Page |
|---|-------------|
| Introduction. | 5 |
| 1. The need for and value of specifications for purity . . . | 6 |
| 1.1 Value in protecting the consumer | 6 |
| 1.2 Value for regulatory purposes. | 7 |
| 1.3 Value to industry | 7 |
| 1.4 Value in determining safety for use | 7 |
| 1.5 Source and nature of impurities. | 8 |
| 2. General considerations on food colours. | 9 |
| 2.1 General principles governing the establishment of specifications for identity and purity. | 9 |
| 2.1.1 Natural colours | 9 |
| 2.1.2 Synthetic organic food colours. | 10 |
| 2.1.3 Substances studied | 10 |
| 2.2 General principles governing the toxicological evalua- tion | 11 |
| 2.2.1 Classification of colours in accordance with their toxicological evaluation. | 14 |
| 2.2.2 Conclusion. | 15 |
| 3. General considerations on some antimicrobials and anti- oxidants | 15 |
| 3.1 General principles governing the establishment of spe- cifications for identity and purity | 15 |
| 3.1.1 Substances studied | 16 |
| 3.1.2 Impurities | 16 |
| 3.2 General principles governing toxicological re-evaluation | 17 |
| 4. Recommendations to FAO and WHO | 20 |
| Annex 1. Classification of colours | 21 |
| Annex 2. Acceptable daily intake zones for man of some anti- microbials and antioxidants | 25 |
