

CONTENTS

Importance of Laboratory Validations and Accurate Descriptions of Analytical Procedures for Drug Residues in Foods	1
Incidence of Residues in Foods of Animal Origin	5
Radioimmunoassay of Antibiotic/Drug Residues in Foods of Animal Origin	23
Current Problems Associated with the Detection of Antibiotic/Drug Residues in Milk and Other Food	31
ELISA and It's Application for Residue Analysis of Antibiotics and Drugs in Products of Animal Origin	57
Evaluation and Testing of Charm Test II Receptor Assays for the Detection of Antimicrobial Residues in Meat	75
Immunochemical Methods in the Analysis of Veterinary Drug Residues	81
Residues of Anabolic Steroids in Muscle Tissues from Carcasses with Positive Injection Sites	99
Approaches to the Detection and Confirmation of Drug Residues in Milk	107
The Application of Matrix Solid Phase Dispersion (MSPO) to the Extraction and Subsequent Analysis of Drug Residues in Animal Tissues	119
Liquid Chromatographic Approaches to Determination of B-Lactam Antibiotic Residues in Milk and Tissues	133
Comparison of Chromatographic Procedures for Determining Residues of Penicillins	147
A High Performance Liquid Chromatographic Method for the Determination of Nine Sulfonamides in Milk	165
Sulfadimethoxine and Sulfamonomethoxine Residue Studies in Chicken Tissues and Eggs	173

The Current Overview of Feed Additives and Veterinary Drugs and Their Residual Analysis in Japan	187
Application of Electrochemical and UV/Visible Detection to the LC Separation and Determination of Methylene Blue and Its Demethylated Metabolites from Milk	197
The Presence of Dihydroerythroidines in the Milk of Goats Fed <i>Erythrina poeppigiana</i> and <i>E. berterona</i> Foliage	211
Analysis of Selected Chemotherapeutics and Antiparasitics	225
