

CONTENTS

1. Solvent Extraction and Distillation Techniques	1
2. Analysis of Food Volatiles Using Headspace-Gas Chromatographic Techniques	27
3. The Analysis of Food Volatiles Using Direct Thermal Desorption	59
4. Solid-Phase Microextraction for the Analysis of Flavors	81
5. Application of Multidimensional Gas Chromatography Techniques to Aroma Analysis	113
6. Enantiomers: Why They Are Important and How to Resolve Them	143
7. Ion Trap Mass Spectrometry for Food Aroma Analysis	209
8. Off-Flavors and Malodors in Foods: Mechanisms of Formation and Analytical Techniques	237
9. Gas Chromatography-Olfactometry for the Determination of Key Odorants in Foods	265
10. Gas Chromatography-Olfactometry in Food Aroma Analysis	293
11. The Electronic Nose: Sensor Array-Based Instruments that Emulate the Human Nose	331
Index	373
