

CONTENTS

Section 1. Characterization of Moisture Sorption Isotherms

Water Activity and Its Estimation in Food System:	
Theoretical Aspects	1
Derivation of Full Range Moisture Sorption Isotherms	63
Recent developments in Techniques for Obtaining Complete Sorption Isotherms	89
Water Vapor Sorption Isotherms on Macromolecular Substrates	111
Moisture Sorption Hysteresis	143
Effect of Water Activity and Sorption Hysteresis on Rheological Behavior of Wheat Kernels	179
Evaluation of Critical Parameters for Developing Moisture Sorption Isotherms of Cereal Brains	199

Section 2. Bound Water

Water Binding on Starch: NMR Studies on Native and Gelatinized Starch	223
Pulsed NMR and State of Water in Foods	247
Determination of Binding Energy for the Three Fractions of Bound Water	265
Hydration around Hydrophobic Groups	281

Section 3. Solute Mobility in Aqueous Systems and Water – Membrane Interactions

Solute Mobility in Relation to Water Content and Water Activity	295
Use of Electron Spin Resonance for the Study of Solute Mobility in Relation to Moisture Content in Model Food Systems	319
A Thermodynamic Model for Terpene-Water Interactions	347
Hydration of Biological Membranes	377
Structure of Water in Aqueous Systems	407

Section 4. Influence of Water on Chemical Structure and Reactivity

Theoretical Studies of Water in Carbohydrates and Proteins	435
Hydration of Milk Proteins	467
Protease Action on Proteins at Low Water Concentration	489

Section 5. Influence of Water Activity on Chemical Reactivity and Stability of Foods

Autoxidation-Initiated Reactions in Foods	511
Influence of Water Activity on Stability of Vitamins in Dehydrated Foods	531
Formation and Decomposition of Browning Intermediates and Visible Sugar-Amine Browning Reactions	567
The Non-Enzymatic Browning Reactions as Affected by Water in Foods	605
Acceleration of Chemical Reactions Due to Freezing	651

Section 6. Influence of Water Activity on Food Quality and Stability

The Forms and Energy of Moisture Binding in Foods as a Basis for Choosing Rational Methods of Processing and Storage	679
Water Activity at Subfreezing Temperatures	713
Traditional Techniques in Japan for Food Preservation by Freezing, Thawing, and Drying	733
State of Water in Sea Food	743
Role of Water in Withering of Leafy Vegetables	765
Influence of Water Activity on the Manufacture and Aging of Cheese	791

Section 7. Influence of Water Activity on the Behavior of Microorganisms

Thermal Properties of Water in Relation to Microbial Cells	813
Specific Solute Effects on Microbial/Water Relations	825
Microbiology of Meat and Meat Products in High and Intermediate-Moisture Range	855
Index	917
