

CONTENTS

Foreword	5
Workshop Participants	8
Current utilization and future potential for cassava	11
Cassava as food: toxicity and technology	27
Cyanide toxicity in relation to the cassava research program of CIAT in Colombia	37
Cyanide toxicity and cassava research at the International Institute of Tropical Agriculture, Ibadan, Nigeria	41
The cyanogenic character of cassava (<i>Manihot esculenta</i>)	43
The genetics of cyanogenesis	49
Cyanogenic glycosides: their occurrence, biosynthesis, and function	55
Physiological and genetic aspects of cyanogenesis in cassava and other plants	65
Biosynthesis of cyanogenic glucosides in cassava (<i>Manihot</i> spp.)	73
Assay methods for hydrocyanic acid in plant tissues and their application in studies of cyanogenic glycosides in <i>Manihot esculenta</i>	89
The mode of cyanide detoxication	97
Chronic cyanide toxicity in domestic animals	105
Implications of cyanide toxicity in animal feeding studies using high cassava rations	113
Cyanide and human disease	121
Ataxic neuropathy associated with high cassava diets in West Africa	127
Endemic goitre and high cassava diets in eastern Nigeria	139
Evidence of an antithyroid action of cassava in man and in animals	147
Mechanism of goitrogenic action of cassava	153
Summary of the General Discussion	159
