

## CONTENTS

<b>1</b>	<b>MANUFACTURE OF STARCH AND GLUTEN FROM FLOUR</b>	<b>1</b>
	Introduction-Traditional methods-Flour considerations-Water requirements-Unit operations-Starch slurry tables-Weight balances and yields-Starch effluent-Alternative extraction methods-Experimental methods.	
<b>2</b>	<b>WHEAT STARCH AND ITS FORMS</b>	<b>40</b>
	Raw starch-Crystal starch-Pre-cooked starches-Oxidised starch-Acid-modified starch-Starch ether-Dialdehyde starch-Cationic starch-Torrefaction dextrines-Enzymic dextrines-Glucose and dextroses-Solid glucose-Amylose and amylopectin separation-Starch phosphates.	
<b>3</b>	<b>GLUTEN</b>	<b>84</b>
	Composition-Structure-Properties-Effect of heat-Uses-Gluten sulphate-Gluten phosphate-Amino-acids-Hydrolysed vegetable protein (H.V.P.)-Monosodium glutamate.	
<b>4</b>	<b>LABORATORY METHODS</b>	<b>106</b>
	Formol method for amino-acids-Gluten-Moisture-Dough testing (Brabender Farinograph)-Dough testing (Brabender Extensograph)-Flour solubles-Pre-cooked starches-Reducing sugars-Nitrogen and protein-Pentosan content in starch and flour-Starch in paper-Starch bulk volume-Amino-acids-An exact microbiological method for L-glutamic acid-Amyloglucosidase enzyme assay-Alkali fluidity of starch-Fat in starch-Starch pastes-Preparation of amino-acids by paper chromatography-Degree of substitution in starch ethers.
