Part I Analysing and modifying starch

1	Plant starch synthesis	
	<i>J. Preiss, Michigan State University, USA</i>	
1.1	Introduction: localization and function of starch in plants ...	
1.2	Starch synthesis: enzyme reactions in plants and algae and glycogen synthesis in cyanohacteria	
1.3	Properties of plant glucan synthesizing enzymes: ADP-glucose pyrophosphorylase	6
1.4	Properties of plant glucan synthesizing enzymes: starch synthase	18
1.5	Properties of plant glucan synthesizing enzymes: branching enzymes	25
1.6	Initiation of starch synthesis using a glucosyl-protein	33
1.7	Locating starch synthesis in plants: the plastid	33
1.8	<i>In vivo</i> synthesis of amylopectin	37
1.9	Regulating starch synthesis in plants	41
1.10	References	49
2	Analysing starch structure	57
	<i>E. Bertoft, Åbo Akademi University, Finland</i>	
2.1	Introduction: characterising structures of starch components	57
2.2	Fractionation of starch	59
2.3	Analysis of amylose	60

2.4	Analysis of amylopectin structure	64
2.5	Analysis of intermediate materials	75
2.6	Analysis of chemically modified starches	77
2.7	Future trends	79
2.8	Sources of further information and advice	81
2.9	References	81
3	Starch bioengineering	97
	<i>A. Blennow, The Royal Agricultural and Veterinary University, Denmark</i>	
3.1	Introduction: the importance of starch	97
3.2	Technologies for genetic modification and starch profiling ..	99
3.3	Improving starch yield and structure	102
3.4	Physical and chemical properties of modified starches	111
3.5	Functionality and uses of modified starches in food processing	112
3.6	Ensuring successful modification of starch	114
3.7	Future trends	117
3.8	References	119
4	Starch-acting enzymes	128
	<i>D. P. Butler, Marc J. E C. van der Maarel and P. A. M. Steeneken, TNO Nutrition and Food Research Institute, The Netherlands</i>	
4.1	Introduction: the importance of enzymes	128
4.2	Using enzymes to modify starch	131
4.3	Developing starch-modifying enzymes for food processing applications	141
4.4	Future trends	148
4.5	References	149
5	Understanding starch structure and functionality	156
	<i>A. M. Donald, University of Cambridge, UK</i>	
5.1	Introduction: overview of packing at different lengthscales ..	156
5.2	The effect of amylopectin chain architecture on packing	161
5.3	Improving packing within starch granules	165
5.4	The gelatinisation process	169
5.5	Food processing: implications of starch granule structure	174
5.6	Conclusions and future trends	177
5.7	Sources of further information and advice	178
5.8	References	179
6	Measuring starch in food	185
	<i>M Peris-Tortajada, Polytechnic University of Valencia, Spain</i>	
6.1	Introduction	185
6.2	Sample preparation	186

6.3	Methods of analysing starch in food	188
6.4	Determining starch in food: recent technological developments	198
6.5	Future trends	201
6.6	Sources of further information and advice	203
6.7	References	204
Part II Sources of starch		209
7	The functionality of wheat starch	211
	<i>H Cornell, RMIT University, Australia</i>	
7.1	Introduction: manufacture of wheat starch for the food industry	211
7.2	Granular and molecular structure of wheat starch	213
7.3	Functionality of wheat starch: granules, films and pastes	218
7.4	Rheological properties of starch pastes and gels	221
7.5	Improving and chemically modifying wheat starch for use in the food industry	225
7.6	Wheat starch syrups	231
7.7	Analysing starch-based products	234
7.8	Future trends	236
7.9	Sources of further information and advice	236
7.10	References	238
8	Developments in potato starches	241
	<i>W. Bergthaller, Federal Centre for Nutrition and Food, Germany</i>	
8.1	Introduction	241
8.2	Components and rheological properties of potato starch	242
8.3	Techniques for producing potato starch	245
8.4	Improving the functionality of potato starch for use in the food industry	246
8.5	Future trends	252
8.6	References	254
9	The functionality of rice starch	258
	<i>J. Bao and C. J. Bergman, Texas A&M University, USA</i>	
9.1	Introduction	258
9.2	Rice flour and starch as food ingredient	260
9.3	Constituents of rice starch	261
9.4	Structure and functionality of rice starch	262
9.5	Gelatinization and the structure of rice starch	271
9.6	Retrogradation and other properties of rice starch	279
9.7	Improving rice starch functionality for food processing applications	283
9.8	Future trends	287

9.9	Sources of further information and advice	288
9.10	References	289
10	New corn starches	295
	<i>P. J. White and A. Tziotis, Iowa State University, USA</i>	
10.1	Introduction: the use of corn starch in food processing	295
10.2	Improving the functionality of corn starch for food processing applications: natural corn endosperm mutants	298
10.3	Chemically modifying corn starches for use in the food industry	305
10.4	Genetically modifying corn starches for use in the food industry	311
10.5	Future trends	314
10.6	Sources of further information and advice	314
10.7	References	314
11	Tropical sources of starch	321
	<i>S. N. Moorthy, Central Tuber Crops Research Institute, India</i>	
11.1	introduction: tropical sources of starch	321
11.2	Characteristics and properties of cassava starch	326
11.3	Characteristics and properties of sweet potato starch	334
11.4	Characteristics and properties of yam and aroid starches	336
11.5	Characteristics and properties of other minor root starches ..	341
11.6	Modifying 'tropical' starches for use in the food industry ...	350
11.7	Future trends	353
11.8	References	353
Part III	Applications	361
12	Starch as an ingredient: manufacture and applications	363
	<i>P. Taggart, National Starch and Chemical, UK</i>	
12.1	Introduction	363
12.2	Manufacture	363
12.3	Structure	368
12.4	Modifications	370
12.5	Technical data	374
12.6	Uses and applications	379
12.7	Regulatory status: European label declarations	390
12.8	Acknowledgements	392
12.9	Bibliography	392
13	Utilizing starches in product development	393
	<i>T. Luallen, Cargill Inc., USA</i>	
13.1	Introduction	393

13.2	Components of starch	394
13.3	Food applications for natural and modified starches	396
13.4	Methods of starch selection	399
13.5	Factors affecting starch in food products	402
13.6	Using the functional properties of starch to enhance food products	409
13.7	References	423
14	Modified starches and the stability of frozen foods	425
	<i>H. D. Goff, University of Guelph, Canada</i>	
14.1	Introduction	425
14.2	The structure and stability of frozen foods	426
14.3	The role of modified starch in stabilizing frozen foods	432
14.4	Future trends	436
14.5	Sources of further information and advice	436
14.6	References	437
15	Starch-lipid interactions and their relevance in food products .	441
	<i>A-C. Eliasson and M. Wahlgren, Lund University, Sweden</i>	
15.1	Introduction	441
15.2	The structure and properties of the starch-lipid complex	441
15.3	Analysis of starch: lipids and emulsifiers	448
15.4	The effect of lipids on starch behaviour	450
15.5	Enzymatic degradation of amylose-lipid complexes	453
15.6	Future trends	454
15.7	References	454
16	Starch-based microencapsulation	461
	<i>P. Forssell, VTT Biotechnology, Finland</i>	
16.1	Introduction: using microencapsulation in food processing ...	461
16.2	Using starch in microencapsulation: starch hydrolysates, derivatives, polymers and granules	464
16.3	Starch-based shell matrices for food ingredients	469
16.4	Future trends	470
16.5	References	471
Part IV	Starch and health	475
17	Development of a range of industrialised cereal-based foodstuffs high in slowly digestible starch	477
	<i>V. Lang, Danone Vitapole, France</i>	
17.1	Introduction	477
17.2	Characteristics and properties of starch and starchy foods	481
17.3	Low G I diets and their associated health benefits	488

17.4	Case study: low glycaemic index, high slowly digestible starch plain biscuits, the EDP® ('Long-lasting energy') range developed by Danone, Vitapole	494
17.5	Future trends	498
17.6	Sources of further information and advice	498
17.7	Acknowledgements	499
17.8	References	500
18	Starch: physical and mental performance	505
	<i>F. Brouns, Cerestar Vilvoorde R & D Centre, Belgium and University of Maastricht, Netherlands and L. Dye, University of Leeds, England</i>	
18.1	Introduction	505
18.2	Physical performance: energy requirements, delivery and availability	507
18.3	Mental performance: the effects of glucose	518
18.4	Mental performance: the effects of CHO and glucose during the day	523
18.5	Future trends	531
18.6	References	532
19	Detecting nutritional starch fractions	541
	<i>K. Englyst and H. Englyst, Englyst Carbohydrates, UK</i>	
19.1	Introduction	541
19.2	Methods of determining RAG, SAG and RS fractions	544
19.3	Quality control and troubleshooting	551
19.4	Carbohydrate bioavailability data for selected foods	553
19.5	Conclusion and future trends	553
19.6	Acknowledgement	557
19.7	References	557
20	Resistant starch	560
	<i>M. Champ, INRA-UFDNH/CRNH, France</i>	
20.1	Introduction	560
20.2	Effects of resistant starch on the digestive system	562
20.3	Improving the functional effects of resistant starch	567
20.4	Future trends	571
20.5	Sources of further information and advice	571
20.6	References	572
21	Analysing starch digestion	575
	<i>R. E. Wachtters-Hagedoorn, M. G. Priebe and R. J. Vonk, University Hospital Groningen, The Netherlands</i>	
21.1	Introduction	575
21.2	Starch and the prevention of hypo- and hyperglycemia	575

21.3	The determinants of the rate of absorption of starch-derived glucose	578
21.4	Techniques for monitoring starch digestion	581
21.5	Current applications of slowly available starch and the prevention of hyper- and hypoglycemia	583
21.6	Future trends	586
21.7	Sources of further information and advice	587
21.8	References	587
