

CONTENTS

CHAPTER I. KINETICS AND CHEMISTRY OF FAT OXIDATION PROCESSES AND MODEL SYSTEMS	1
1. The mechanism of chain oxidation processes	2
2. Mechanism of chain initiation	12
3. Formation of hydroperoxides as primary oxidation products	19
4. Kinetic equations for chain reactions of oxidation with degenerate branching by the intermediate product	49
5. Hydroperoxide decomposition and the formation of secondary oxidation products	56
References	70
CHAPTER II. CATALYSIS OF THE OXIDATIVE DECAY OF FATS	79
1. Catalytic effect of transition metals on the oxidation of organic compounds	79
2. Biological catalysis of fat oxidation and the effect of inhibitors	89
3. Effect of penetrating irradiation and the stability of edible fats	107
References	114
CHAPTER III. THE CHAIN THEORY AND THE CHEMISTRY OF INHIBITIVE ACTION	119
1. The mechanism of retardation processes	119
2. Kinetic characteristics of inhibitive action	156
3. Relationship between the activity of an inhibitor and its chemical structure	177
4. Synergism in oxidation inhibition processes	234
References	240
CHAPTER IV. ANTIOXIDANTS AND SYNERGISTS: THEIR PROPERTIES AND INHIBITIVE ACTIVITY	246
1. Antioxidants	247
2. Synergists	305
3. Comparative efficiency of antioxidants	326
References	348
APPENDIX IX. Survey of antioxidants and synergists which are permitted for use in various Countries	368
APPENDIX TO ENGLISH EDITION	372
INDEX	385
