Opening address by the Chairman of the ICC Study Group on Composite Flours, D. de	
Ruiter, Institute for Cereals, Flour and Bread (TNO) The Netherlands	5
Quality improvement in sorghum and millets	7
FAO current activities in millet and sorghum processing and uses	11
The milling of Pennisetum millet and the value of the protein in the products	13
Threshing of sorghum	19
Some characteristics which influence the yield and quality of pearled sorghum grain	21
Potential use of sorghum grains in pasta processing	27
Use of pearl millet and sorghum flours in bread and cookies	37
Processing of sorghum and millets for versatile food uses in India	41
Specific characteristics of millet and sorghum milling	47
UNDP/FAO sorghum processing project in the Sudan	53
Processing of sorghum by lime-cooking for the preparation of tortillas	57
Palyi's compact system for debranning of sorghum and millet	59
Contribution to the study of the biochemical phenomena of millet and sorghum flour deterioration	69
Beverages from sorghum and millets	73
Pericarp and endosperm structure of pearl millet (Pennisetum typhoides)	79
The structure of sorghum and its relation to processing and nutritional value	91
Millet and sorghum milling	111
The potential of millet and sorghum as food in Nigeria	121
Comilling of wheat and millet grains: A preliminary Study	125
Bread from starchy tropical crops: II. Bread production from pure millet and sorghum flours, by	
using cereal endosperm-cellwall-pentosan as a universal baking factor	127
Chairman's closing remarks	133
General discussion	135
List of participants	137
