

CONTENTS

SESSION I

Plant structure and dehydration	3
The structure of the animal tissues and dehydration	8
“Bound water” in foods	14
The sorption of water by haemoglobin	24

SESSION II

Some properties of air in relation to dehydration	33
Some mathematical diffusion studies relevant to dehydration	37
Physical phenomena during the drying of foodstuffs	42

SESSION III

Rate-controlling factors in freeze drying	57
Moisture equilibrium and the determination of water content of dehydrated foods	67
Water-vapour transfer in the in-package desiccation of dehydrated foods	89

SESSION IV

A study of evaporation and diffusion processes in the drying of fish muscle	103
Some physical data concerning the drying of potato strips	136
Diffusion and thermodynamics of water in potato starch gel	143
Experimental contribution to the evaporation of wheat during artificial drying	158

SESSION V

The effect of drying and storage in the dried state on some properties of the proteins of food	167
Chemical changes in the preparation and storage of dehydrated foods	178
Deterioration of dehydrated meat during storage	197
The influence of the conditions of dehydration on the quality of vacuum-dried meat	211
Dehydration of vegetables in multi-stage cross-flow systems	225
