	Page
Preface	ix
Contributors List	xi
1. Introduction to Minimally Processed Refrigerated Fruits and Vegetables	1
Definitions of MPR Fruits and Vegetables	10
Approach to studying MPR Fruits and Vegetables	12
2. Initial preparation, Handling, and Distribution of Minimally Processed Refrigerated Fruits and Vegetables	15
Introduction	15
Major Unit Operations of MPR Fruits	25
Distribution and Utilization of MPR Fruits and Vegetables	49
3. Preservation Methods for Minimally Processed Refrigerated Fruits and Vegetables	66
Introduction	66
Microbiological and Enzyme Considerations to Prevent Spoilage of MPR Fruits and Vegetables	70
Heat Preservation	75
Chemical Preservation / Preservatives	84
Gas and Controlled / Modified Atmosphere Preservation	107
Cold Preservation	117
Preservation Using Irradiation	119
Reduction of Water Activity (a_w)	125
Oxidation – Reduction Potential	125
Preservation by Combined Methods	127
4. Packaging of Minimally Processed Fruits and Vegetables	135
Introduction	135
Requirements of a Package or Packaging Materials	136
Parameters of Produce Quality Loss	137
Methods Available for Control of Produce Quality	138
Modified Atmosphere Packaging of Fresh and Minimally Processed Produce	140
Factors That Influence MAP Induced Atmosphere Within Sealed MA Packages of Produce	141
Polymeric Film Permeability	142
Polymeric Films Used for MA Packaging of MPR Products	145
Moisture Vapor Transmission Rate for MAP of Fresh and Minimally Processed Produce	158
Selection of MA Packaging Materials	160
Non-Plastic Components of MA Plastic Packaging Materials	164
Safety Considerations Relevant to MAP of Fresh and Minimally Processed Produce	166
Packaging Requirements for Shipping and Distribution of Fresh and Minimally Processed MAP Produce	167
Conclusions	176
5. Some Biological and Physical Principles Underlying Modified Atmosphere Packaging	183
Introduction	183
Biological Responses of Plant Tissues to Low O ₂ and / or High CO ₂	184
Determination of Gas Diffusivities in Plant Tissues	194
Modeling for Appropriate Gas Environment in Modifying Atmosphere Packaging	206
Concluding Remarks	219

6.	Biological and Biochemical Changes in Minimally Processed Refrigerated Fruits and Vegetables	226
	Introduction	226
	Mechanisms of Quality Deterioration	228
	Effects of Processing and Marketing Techniques on Quality	233
	Conclusions and Further Directions	258
7.	Microbiological Spoilage and Pathogens in Minimally Processed Refrigerated Fruits and Vegetables	269
	Introduction	269
	Importance of Microbiology	270
	Microbiology of Minimally Processed Produce	270
	Factors Which Affect Microbiology	278
	Spoilage	291
	Safety	296
	Summary and Conclusion	306
8.	Nutritional Quality of Fruits and Vegetables Subject to Minimal Processes	313
	Introduction	313
	Maturity and Cultivar Effects	314
	Transportation and Marketing Conditions	315
	Initial Preparation	317
	Controlled and Modified Atmosphere and Refrigerated Storage	318
	Irradiation	321
	Edible Films	322
	Summary	323
9.	Regulatory Issues Associated with Minimally Processed Refrigerated Foods	327
	Introduction	327
	Microbiological Hazards of Minimally Processed Refrigerated Foods as Related to Outbreaks of Various Pathogens	332
	Regulatory and Labeling Issues Associated with Minimally Processed Foods	340
	Industry Initiatives	346
	Conclusion	349
	Appendix	354
	Index	358
