

## TABLE OF CONTENTS

Opening Address for the Seafood Biotechnology Workshop	1
<b>Chapter I. Harvesting Technology</b>	
Fish Harvesting Technology and Profitability	7
Application of Research in Fish Harvesting by Passive Gears in Norway Particularly Longlining	23
<b>Chapter II. Aquaculture Biotechnology/Technology</b>	
Gene Transfer in Fish	35
An Overview of Atlantic Cod Farm Operations in Newfoundland and Labrador 1986-1988	51
A Pilot-Scale Monitoring Program for the Oyster Industry in North-Eastern New Brunswick	63
<b>Chapter III. Processing Technology</b>	
Batch Sterilization in Full-Water-Immersion: Adequate Properties for the Thermoprocessed High Quality Shelf-Stable Food Products in Low-Profile Containers	71
Processing of Mackerel Surimi	81
Textural Quality of Thermally Processed Kamaboko	97
Some Technological Properties of Seal Meat	105
Process for Preparing Lumpfish Roe Caviar from Non-cured Roe	111
Use of Semi-Cryoprotected Mince in Formulating Seafood Based Products	121
Utilization of Lumpfish ( <i>Cyclopterus lumpus</i> ) Carcasses for the Production of Gelatin	143
Use of Menhaden Fish Oil in Mayonnaise	151
Current Seafood Processing Waste Utilization Options as a Function of Scale of Raw Material Production	163
Sous-Vide Technology	169
Fish Processing – A Need for Change	189
On-Line Production Control Using Computer Vision for Prediction of Optimal Yield	197
<b>Chapter IV. Packaging Technology</b>	
Requirements of Packaging for Seafoods Versus Those for Other Types of Products	215
Freshness Indicators: A Tool For Monitoring Shelf-Life and Expanding Distribution of Fresh Seafood Products	225

<b>Chapter V. Marine Enzyme Biotechnology</b>	
Application of Enzymes for Fish Processing in Iceland – Present and Future Aspects	237
Optimization of Papain Hydrolysis of Cod Frames	251
<b>Chapter VI. Marine Colloid Biotechnology</b>	
Marine Hydrocolloids in Biotechnological Applications – The Topical Demand – to What Extent Must They Be Purified and Characterized	265
Chitin/Chitosan and Their Applications	287
Chemical Composition and Chitin Content of Crustacean Offal	299
Effects of Carrageenan on Gelling Potential of Surimi Prepared From Atlantic Pollock	305
The Function of a Carrageenan-Based Stabilizer to Improve Quality of Fabricated Seafood Products	313
Fish Gelatin	325
<b>Chapter VII. Marine Lipid Biotechnology</b>	
The Applications of Lipases for Modification of Fats and Oils, Including Marine Oils	337
<b>Chapter VIII. Marine Fermentations Biotechnology</b>	
Utilization of Marine Biomass for Production of Microbial Growth Media and Biochemicals	361
Bioavailability of Astaxanthin in <i>Phaffia rhodozyma</i>	373
Composting of Fish Offal With Peat and its Use in the Production of Microbial Biomass	387
<b>Chapter IX. Marine Protein Engineering/Biotechnology</b>	
The Role of Hydrodynamic Properties of Biopolymers in Texture-Strengthening/Modification and Freeze-Thaw Stabilizing of Surimi Gel	397
Functional Properties of Sardine Surimi Related to pH, Ionic Strength and Temperature	413
<b>Chapter X. Marine flavourant Biotechnology</b>	
Seafood Flavourants Produced by Enzymatic Hydrolysis	425
Recovery of Shrimp Waste for Flavourant	437
Profile of Taste Active Components in Crab Products/By-Products and in Cod Surimi	453
<b>Chapter XI. Seafood Safety &amp; Quality/Biotechnology</b>	
The Detection of Listeria in Seafood	471
Determination of K Value by Biosensor	481
An Immunological Method for Measuring Collagen Degradation in the Muscle of Fish	487

<b>Chapter XII. Marine Industrial Developments/Biotechnology</b>	
Biotechnology in Aquaculture and the Fish Processing Industry: A Success Story in Norway	509
Overview of Marine Biotechnology in Japan and its Commercial Application for Aquaculture	525
Research Activities at the Marine Biotechnology Centre in Denmark	543
Canadian Strategic Technologies Program	547
<b>Summary of Seafood Biotechnology Workshop</b>	
Summary of Food Biotechnology Workshop	555
<i>INDEX OF AUTHORS AND TOPICS</i>	559
