<i>Maximizing the value of marine by-products: an overview</i>	xxi

Part I Marine by-products characterisation, recovery and processing

1 Physical and chemical properties of protein seafood by-products	
<i>T. Rustad, Norwegian University of Science and Technology, Norway</i>	
1.1 Introduction	3
1.2 Overview	4
1.3 Physical and chemical properties of protein-rich by-products – seasonal, habitat, species and individual variations	11
1.4 Implication for by-products valorisation	16
1.5 Future trends	17
1.6 Sources of further information and advice	17
1.7 References	18
2 Physical and chemical properties of lipid by-products from seafood waste	22
<i>J. P. Kerry and S. C. Murphy, National University of Ireland, Cork, Ireland</i>	
2.1 Introduction to fish lipids	22

2.2	Health benefits associated with fish lipids	24
2.3	Fatty acids found in fish muscle	25
2.4	Fatty acids found in fish by-products	26
2.5	Factors affecting the fatty acid composition of fish and their associated by-products	28
2.6	Deterioration of fish lipids	30
2.7	Implications for fish fat by-product valorization	32
2.8	Future trends	34
2.9	References	35
3	On-board handling of marine by-products to prevent microbial spoilage, enzymatic reactions and lipid oxidation	47
	<i>E. Falch, M. Sandbakk and M. Aursand, SINTEF Fisheries and Aquaculture, Norway</i>	
3.1	Introduction	47
3.2	Deterioration of marine biomass	47
3.3	Handling and sorting	49
3.4	Conservation and stabilisation	52
3.5	On-board processing	56
3.6	Utilisation of by-products from gadiform species	59
3.7	Future trends	61
3.8	Acknowledgements	61
3.9	References	62
4	Recovery of by-products from seafood processing streams	65
	<i>J. A. Torres, Oregon State University, USA. Y. C. Chen, Chung Shan Medical University, Taiwan. J. Rodrigo-Garcia, Universidad Autónoma de Ciudad Juárez, Mexico and J. Jaczynski, West Virginia University, USA</i>	
4.1	Introduction	65
4.2	State of global fisheries and by-products	66
4.3	Basic properties of water, proteins and lipids in aquatic foods	68
4.4	Recovery of functional proteins and lipids from by-products	75
4.5	Protein recovery from surimi processing water	84
4.6	Conclusions	88
4.7	References	88
5	Increasing processed flesh yield by recovery from marine by-products	91
	<i>K. D. A. Taylor and A. Himonides, University of Lincoln, UK and C. Alasalvar, TUBITAK, Turkey</i>	
5.1	Introduction	91
5.2	Recovery of flesh from filleting waste	92

5.3	Recovery of flesh from demersal species	98
5.4	Quality and improvement of fish mince	99
5.5	Future trends	103
5.6	Sources of further information and advice	104
5.7	References	104
6	Enzymatic methods for marine by-products recovery	107
	<i>F. Guerard. University of Western Brittany. France</i>	
6.1	Introduction	107
6.2	Overview of by-products extracted by enzymatic methods ...	108
6.3	Enzymatic extraction methods	109
6.4	Traceability of by-products	134
6.5	Conclusions and future trends	135
6.6	Acknowledgements	136
6.7	References and further reading	136
7	Chemical processing methods for protein recovery from marine by-products and underutilized fish species	144
	<i>H. G. Kristinsson. A. E. Theodore and B. Ingadottir. University of Florida. USA</i>	
7.1	Introduction	144
7.2	Chemical extraction: fish protein concentrate	146
7.3	Chemical hydrolysis	148
7.4	Surimi processing	149
7.5	Fish protein isolates: pH-shift processing	152
7.6	Other processes using low or high pH	161
7.7	Future trends	162
7.8	References and further reading	163

Part II Food uses of marine by-products

8	By-catch, underutilized species and underutilized fish parts as food ingredients	171
	<i>I. Batista. Fish and Sea Research Institute. (IPIMAR). Portugal</i>	
8.1	Introduction: by-catch, discards and by-products	171
8.2	Key drivers	173
8.3	Using the by-catch and underutilized species	174
8.4	Using underutilized fish parts as food and food ingredients ..	179
8.5	Future trends	189
8.6	Sources of further information and advice	190
8.7	Acknowledgement	191
8.8	References	191

12.4	Algal oil	268
12.5	Marine oil manufacturing process	269
12.6	Health effects of PUFA	271
12.7	References	272
13	Collagen and gelatin from marine by-products	279
	<i>J. M. Regenstein and P. Zhou, Cornell University, USA</i>	
13.1	Introduction	279
13.2	Key drivers of marine collagen and gelatin	279
13.3	Sources of marine collagen and gelatin	281
13.4	Manufacture of marine collagen and gelatin	281
13.5	Properties of marine collagen and gelatin	288
13.6	Food applications	295
13.7	Non-food applications	297
13.8	Improving the quality of collagen and gelatin	298
13.9	Sources of further information and advice	299
13.10	References	299
14	Seafood flavor from processing by-products	304
	<i>C. M. Lee, University of Rhode Island, USA</i>	
14.1	Introduction	304
14.2	Aqueous extraction	305
14.3	Fermentation	305
14.4	Enzymatic hydrolysis	306
14.5	Enzyme-assisted seafood flavors from processing by-products	308
14.6	Flavor-imparting compounds and chemistry	319
14.7	Future trends	324
14.8	References	325
15	Fish and bone as a calcium source	328
	<i>S.-K. Kim and W.-K. Jung, Pukyong National University, Republic of Korea</i>	
15.1	Introduction	328
15.2	Biochemical properties of fish bone	330
15.3	Utilization of fish bone calcium and organic compound	331
15.4	<i>In vivo</i> availability of soluble calcium complex from fish bone	335
15.5	Acknowledgements	336
15.6	References	336
16	Chitin and chitosan from marine by-products	340
	<i>F. Shahidi, Memorial University of Newfoundland, Canada</i>	
16.1	Introduction	340
16.2	Chemical characteristics	341
16.3	Applications of chitin, chitosan and their oligomers	353

20.5	Methods of producing hydrolysates and silage	441
20.6	Nutritional benefits and other properties of fish and animal feeds made from seafood processing wastes	443
20.7	Future trends	444
20.8	References	445
21	Using marine by-products in pharmaceutical, medical, and cosmetic products	450
	<i>J. Losso, Louisiana State University, USA</i>	
21.1	Introduction	450
21.2	Squalamine	451
21.3	Collagen	452
21.4	Elastin	454
21.5	Proteoglycans	454
21.6	Protamine	455
21.7	Future trends	456
21.8	References	456
22	Bio-diesel and bio-gas production from seafood processing by-products	460
	<i>R. Zhang and H. M. El-Mashad, University of California Davis, USA</i>	
22.1	Introduction	460
22.2	Quantity and quality of various seafood processing by-products	461
22.3	Theories and technologies for production of bio-diesel and bio-gas fuels	463
22.4	Potential yields and quality of bio-diesel and bio-gas fuels ..	471
22.5	Problems encountered and possible approaches for overcoming them	476
22.6	Future research needs	479
22.7	Summary	480
22.8	Sources of further information and advice	480
22.9	List of abbreviations	481
22.10	References	482
23	Composting of seafood wastes	486
	<i>A. M. Martin, Memorial University of Newfoundland, Canada</i>	
23.1	Introduction	486
23.2	Biodegradation of seafood wastes by composting	487
23.3	Composting operational parameters	490
23.4	Characteristics of the composting of seafood wastes	494
23.5	Technological aspects	495
23.6	Biological aspects	501
23.7	Vermicomposting	503
23.8	Quality considerations	507
