

CONTENTS

Foreword to the First Edition	v
From the Preface to the First Edition	vii
Preface to the Second Edition	ix

PART I-PRELIMINARY OPERATIONS

Chapter 1: The Raw Material and the Process	3
1.1. Introduction	
1.2. Geometric properties of the food	
1.3. Other physical properties of the raw material	
1.4. Functional properties of food raw materials	
1.5. Growth properties of the raw material	
1.6. Mechanisation and the raw material	
Chapter 2: Cleaning of Raw Materials	18
2.1. The functions of cleaning	
2.2. Contaminants in food raw materials	
2.3. Cleaning methods	
Chapter 3: The Sorting and Grading of Foods	34
3.1. Sorting and grading-general considerations	
3.2. Weight sorting	
3.3. Size sorting	
3.4. Shape sorters	
3.5. Photometric sorting	
3.6. Grading of foods	

PART II-CONVERSION OPERATIONS

Chapter 4: Size Reduction and Screening of Solids	61
4.1. General principles	
4.2. Considerations governing equipment selection	
4.3. Size reduction equipment	
4.4. Modes of operation of size reduction plant	
4.5. Disintegration of fibrous materials-slicing, dicing, shredding and pulping	
4.6. Energy requirements for comminution of solids	
4.7. Screening	

Chapter 5: Mixing and Emulsification	84
5.1. Mixing	
5.2. Emulsification	
Chapter 6: Filtration and Membrane Separation	120
6.1. Filtration theory	
6.2. Filtration equipment-principles, design features and general applications	
6.3. Applications for filtration equipment in the food industry	
6.4. Membrane separation-ultrafiltration and reverse osmosis	
Chapter 7: Centrifugation	154
7.1. Introduction and theory	
7.2. Equipment-principles, design features and general applications	
7.3. Applications for centrifugal equipment in the food industry	
Chapter 8. Solid-liquid Extraction and Expression	175
8.1. Solid-liquid extraction (leaching, washing)	
8.2. Expression	
Chapter 9: Crystallisation	208
9.1. Introduction	
9.2. Nucleation	
9.3. Crystal growth	
9.4. Polymorphism	
9.5. Crystallisation processes in the food industry involving separation	
9.6. Crystallisation processes in the food industry not involving separation	
Chapter 10: Heat Processing I	228
10.1. Introduction	
10.2. Modes of heat transfer involved in heat processing of foods	
10.3. Methods of heat generation for heat processing	
10.4. Methods of applying heat to food	
10.5. Food conversion by heat processing	

PART III-PRESERVATION OPERATIONS

Chapter 11: Heat Processing II	251
11.1. Microbiological considerations	
11.2. Preliminary operations for sterilisation in containers	
11.3. Methods of heat sterilisation in containers	
11.4. Sterilisation of the food outside the container	
11.5. Pasteurisation by heat processing	

Chapter 12: Evaporation	286
12.1. Uses of evaporation	
12.2. Basic evaporator construction	
12.3. Factors influencing liquid boiling point	
12.4. The heat load	
12.5. The influence of feed liquor properties on evaporation	
12.6. Evaporation equipment	
12.7. Evaporator ancillary plant	
12.8. Heat conservation in evaporator systems	
Chapter 13: Dehydration	313
13.1. Introduction	
13.2. Theoretical considerations	
13.3. Drying equipment-principles, design features and applications	
13.4. Dehydro freezing	
13.5. Reconstitutability of dried foods	
Chapter 14: Freezing	360
14.1. Introduction and definitions	
14.2. The estimation of freezing times	
14.3. Freezing equipment	
14.4. Thawing	
Chapter 15: Irradiation	383
15.1. Introduction	
15.2. Energy of radiation	
15.3. Effects of radiation	
15.4. Dosimetry	
15.5. Irradiation plant	
Chapter 16: Food Storage	395
16.1. Influence of storage conditions on the product	
16.2. Variability in storage conditions	
16.3. Maintenance and control of storage conditions	

PART IV-ANCILLARY TECHNIQUES

Chapter 17: Plant Hygiene-Hygienic Design, Cleaning and Sterilising	421
17.1. Introduction	
17.2. Hygienic design	
17.3. Plant cleaning and sterilisation	

Chapter 18: Water Supplies and Waste Disposal	442
18.1. Introduction	
18.2. Water supplies	
18.3. Water purification-types of impurities and methods for removal	
18.4. Waste disposal	
Chapter 19: Materials Handling	467
19.1. General considerations	
19.2. Conveyors	
19.3. Elevators	
19.4. Cranes and hoists	
19.5. Trucks	
19.6. Pneumatic equipment	
APPENDICES	
Appendix I: Fluid Flow Formulae	501
I.1. Flow through equipment	
I.2. Fluidisation	
Appendix II: Heat Transfer Formulae	504
II.1. Thermal convection	
II.2. Thermal conduction	
II.3. Radiation transfer	
Appendix III: Psychrometrics	513
III.1. Definitions	
III.2. The psychrometric (or humidity) chart	
Index	519
