

CONTENTS

FRONTISPIECE	i
EDITORIAL BOARD	ii
PREFACE	iii
TABLE OF CONTENTS	vii
LIST OF CONTRIBUTORS	xi
SECTION 1. BIOCHEMISTRY AND CHEMISTRY	1
1. Use Of Proteolytic Enzymes Other Than Rennin in Cheese Production	1
2. Development of High-Activity Alpha-D-Galactosidase Preparations	3
3. Biogenesis of Volatile Flavor Compounds in Fruits	4
4. Role of the Glycolytic Enzymes in Postmortem Changes in Muscle	5
5. Cause and Prevention of Fish Textural Damage During Processing	7
6. Changes in Muscle Proteins as a Result of Microbial Growth	10
7. Heme Pigments in Meats and Fish	11
8. Influence of Thyroid and Adrenal Hormones on Some Biochemical Properties of Skeletal Muscle	13
9. Biochemistry of Rigor Mortis and Associated Characteristics of Muscle Tissue	17
10. Structural Proteins of Striated Muscle	19
11. Modified Protein Foods from Animal Sources	22
12. Postmortem Changes in Collagen and Elastin of Meat	22
13. Culture of Aquatic Life as a Food Protein Source	24
14. Culture of Desert Plants for Food Use	25
15. Improved Low-Cost Storage of Cereal Grains	26
16. A New Generation of Restructured Foods	27
17. Objective Evaluation of Fruit and Vegetable Suitability for Processing	29
18. Nonenzymatic Synthesis of Proteins of High Nutritional Value	30
19. Chemical Reactions in Preserved Foods Catalyzed by Enzyme Prosthetic Groups	31

20. Development of Edible Rapeseed Meal and Protein	32
21. Bitterness in Orange Products	33
22. An Exceedingly Sweet But Metabolizable Sugar for Foods	35
23. Bitter Components in Cheddar Cheese	37
24. Thermal Degradation of Chlorophyll in Green Vegetables	38
25. Effect of Juice Oxidation on Composition of Apple Juice Volatiles	40
26. Effect of Low Temperature and Freezing on Storage Stability of Foods	41
27. Phospholipid Browning in Foods	43
28. Biological Degradation of Chlorophyll	45
29. Fruit Content of Fruit Products	48
30. Proteolysis Under Varying pH Control	50
31. Determination of Carbohydrate Content of Food	52
32. Lipid Degradations and Interactions in Foods	54
33. Food Proteins and Enzymes	56
34. Anthocyanin Degradation	58
35. Ethylene and Senescence	60
36. Prediction-of Extended Shelf Life	61
37. Flavor Deterioration in Frozen Vegetables	62
38. Protective Action of Kappa-Casein	64
39. Inhibiting Oxidation of Lipids in the Living Cell	66
40. The Harmful Effect of Light on Food Quality	67
41. Application of Microbial Enzymes in Food Processing	69
42. An Integrated Approach to Rice Quality	71
SECTION 2. ENGINEERING	73
43. Heat Preservation of Foods in Flexible Containers	73
44. Food Coatings	75
45. Identification of Naturally Occurring Antioxidants in Foods and Spices	76
46. Temporal Variation in the Utilization of Dietary Proteins	77
47. Recovery Processes in Food and Biological Systems	79

48. Physical and Chemical Properties of Foodstuffs	81
49. Production of Single-Cell Protein	82
50. Interactions of Lipid Oxidation and Nonenzymatic Browning	84
51. Synthetic Food Structure	86
52. Thermal Computers in Thermal-Process Optimization	88
SECTION 3. MICROBIOLOGY	90
53. Pasteurization of Shrimp Before Freezing	90
54. High-Temperature Short-Time Processing and Heat Resistance and Germination of Bacterial Spores	91
55. A) Production, Standardization, and Distribution of Anti- Enterotoxin Sera; and B) Gram-Negative Bacteria as Potential Producers of Enterotoxin	96
56. Rapid and Convenient Microbiological Test Methods	98
57. Thermophilic Food Fermentations	100
58. Salmonellae in Cereals, Grain Products, and Dried Coconuts	101
59. Coagulase-Negative Staphylococci in Food Poisoning	103
60. Contamination of Shellfish by Hepatitis Virus	106
61. Chemical Indices of Microbial Quality	108
62. Detection and Enumeration of Fecal Streptococci in Processed Foods	109
63. <i>Clostridium perfringens</i> as a Food-Poisoning Agent	111
64. Removal of Bacteria from Food Raw Materials	117
65. Bacterial Cell Injury and Recovery	118
66. Effect of Microwave Heating on Survival of Microorganisms	119
67. Generation of Heat-Resistant Ascospores by <i>Byssoschlamys fulva</i>	121
68. pH Versus Ionic Strength as Inhibitors of Bacterial Growth	122
69. Enumeration of Clostridia in Foods and Feeds	123
70. Water Activity in Food Preservation	127

SECTION 4. SENSORY PROBLEMS	129
71. Biological Studies of Taste Response	130
72. Taste-Bud Anatomy	132
73. Adsorption and Gas Chromatographic Studies to Resolve Food Flavors	134
74. Adsorption in the Mouth	135
75. Microscopic Examination of Living Tissues	136
76. Isolation and Chemical Identification of Volatile Flavor Components	137
77. Taste or Odor Score as a Function of Storage Conditions	140
78. Warmed-Over Flavor in Precooked Foods	146
79. Texture Measurement as a Science	148
80. Relation of Sensory to Instrumental Analysis of Food Flavors	149
81. Natural Flavors in Fish and Their Loss During Storage	152
82. Relation of Diet to Fish Quality and Flavor	153
83. Satiety as Related to the Nutritional and Physical Properties of Foods	154
84. Evaluation of the Color of a Food	157
85. The Astringency Sensation--Its Role and Nature	159
86. Relation of the Tactile Property to Other Sensations	161
SECTION 5. TOXICOLOGY	163
87. Laboratory Study of Algae as Primary Sources of Biotoxins in Human Foods	163
88. Residues of Halogen-Containing Fumigants in Cereals	164
89. Significance of Smoke in Foods	166
90. Movement of Introduced Chemicals Through Food Chains and in Food Systems, and Their Impact on Health	168
91. Naturally Occurring Pressor Amines in Foods	170
92. Shorter and Less Expensive Methods of Determining the Safety of Food Ingredients	171
93. Favism	172
94. Hemagglutinins	174
95. Lathrogens	176

96. Potentially Toxic or Carcinogenic Compounds in Irradiated Foods	178
97. Degradation of Heterocyclic Insecticides by Food Crops	180
98. Fish as Test Animals for Hazardous Substances in Food	181
99. Estrogens in Foods	183
100. Mycotoxins in Foods	184
101. Potential Nitrate Toxicity from Foods	186
INDEX A -- DISCIPLINES	189
INDEX B -- SUBJECTS	190
