
Contents

Chapter 1	Context and background	1
1.1	Emulsion science in the food industry	1
1.1.1	Development of a more rigorous scientific approach to understanding food emulsion properties	2
1.1.2	Development of new analytical techniques to characterize food properties	2
1.2	General characteristics of food emulsions	3
1.2.1	Definitions	3
1.2.2	Mechanisms of emulsion instability	5
1.2.3	Ingredient partitioning in emulsions	6
1.2.4	Dynamic nature of emulsions	7
1.2.5	Complexity of food emulsions	7
1.3	Emulsion properties	8
1.3.1	Disperse phase volume fraction	8
1.3.2	Particle size distribution	9
1.3.3	Interfacial properties	17
1.3.4	Droplet charge	17
1.3.5	Droplet crystallinity	18
1.3.6	Droplet interactions	19
1.4	Hierarchy of emulsion properties	20
1.5	Understanding food emulsion properties	21
1.5.1	Factors influencing topics and directions of research	21
1.5.2	General approaches used to study food emulsions	23
1.6	Overview and philosophy	26
Chapter 2	Molecular characteristics	27
2.1	Introduction	27
2.2	Forces of nature	28
2.3	Origin and nature of molecular interactions	28
2.3.1	Covalent interactions	28
2.3.2	Electrostatic interactions	29
2.3.3	van der Waals interactions	33
2.3.4	Steric overlap interactions	35
2.4	Overall intermolecular pair potential	35
2.5	Molecular structure and organization is determined by a balance of interaction energies and entropy effects	38
2.6	Thermodynamics of mixing	41
2.6.1	Potential energy change on mixing	42
2.6.2	Entropy change on mixing	43

2.6.3	Overall free energy change on mixing.....	43
2.6.4	Complications.....	44
2.7	Molecular conformation.....	45
2.8	Compound interactions	47
2.8.1	Hydrogen bonds	47
2.8.2	Hydrophobic interactions.....	48
2.9	Computer modeling of liquid properties	48
2.9.1	Monte Carlo techniques.....	49
2.9.2	Molecular dynamics techniques.....	50
2.10	Measurement of molecular characteristics	50
Chapter 3	Colloidal interactions	53
3.1	Introduction	53
3.2	Colloidal interactions and droplet aggregation.....	53
3.3	van der Waals interactions	56
3.3.1	Origin of van der Waals interactions	56
3.3.2	Modeling van der Waals interactions	56
3.3.3	General features of van der Waals interactions.....	62
3.4	Electrostatic interactions	63
3.4.1	Origins of electrostatic interactions	63
3.4.2	Modeling electrostatic interactions.....	63
3.4.3	General characteristics of electrostatic interactions	68
3.5	Steric interactions.....	69
3.5.1	Origin of steric interactions	69
3.5.2	Modeling steric interactions.....	69
3.5.3	General characteristics of steric interactions.....	73
3.6	Depletion interactions	74
3.6.1	Origin of depletion interactions	74
3.6.2	Modeling of depletion interactions	75
3.6.3	General characteristics of depletion interactions	77
3.7	Hydrophobic interactions.....	78
3.7.1	Origin of hydrophobic interactions	78
3.7.2	Modeling hydrophobic interactions	79
3.7.3	General characteristics of hydrophobic interactions	81
3.8	Hydration interactions	81
3.8.1	Origin of hydration interactions	81
3.8.2	Modeling hydration interactions.....	81
3.8.3	General characteristics of hydration interactions.....	82
3.9	Thermal fluctuation interactions	83
3.9.1	Origin of thermal fluctuation interactions.....	83
3.9.2	Modeling thermal fluctuation interactions.....	84
3.9.3	General characteristics of fluctuation interactions.....	84
3.10	Nonequilibrium effects	85
3.10.1	Molecular rearrangements at the interface.....	85
3.10.2	Hydrodynamic flow of continuous phase.....	85
3.10.3	Gibbs–Marangoni effect.....	86
3.11	Total interaction potential.....	86
3.11.1	van der Waals and steric	87
3.11.2	van der Waals, steric, and electrostatic.....	88
3.11.3	van der Waals, steric, electrostatic, and hydrophobic	91
3.11.4	van der Waals, steric, electrostatic, and depletion.....	91

3.12	Measurement of colloidal interactions	92
3.13	Prediction of colloidal interactions in food emulsions.....	93

Chapter 4 Emulsion ingredients95

4.1	Introduction	95
4.2	Fats and oils.....	96
4.2.1	Molecular structure and organization	98
4.2.2	Bulk physicochemical properties	98
4.2.3	Fat crystallization	100
4.2.4	Chemical changes	109
4.2.5	Selection of an appropriate lipid	110
4.3	Water.....	112
4.3.1	Molecular structure and organization	112
4.3.2	Bulk physicochemical properties	113
4.3.3	Influence of solutes on the organization of water molecules	114
4.3.4	Influence of solutes on the physicochemical properties of solutions	121
4.3.5	Selection of an appropriate aqueous phase	121
4.4	Emulsifiers.....	122
4.4.1	Surfactants	122
4.4.2	Amphiphilic biopolymers	137
4.4.3	Selection of an appropriate emulsifier	146
4.5	Texture modifiers	148
4.5.1	Thickening agents	148
4.5.2	Gelling agents.....	153
4.5.3	Commonly used texture modifiers	158
4.5.4	Selection of an appropriate texture modifier	167
4.6	Other food additives	168
4.6.1	pH control	168
4.6.2	Minerals	168
4.6.3	Sequestrants (chelating agents)	169
4.6.4	Antioxidants	169
4.6.5	Antimicrobial agents	171
4.6.6	Flavors	171
4.6.7	Colorants	172
4.6.8	Weighting agents	172
4.6.9	Fat replacers	173
4.7	Factors influencing ingredient selection	173

Chapter 5 Interfacial properties and their characterization.....175

5.1	Introduction	175
5.2	General characteristics of interfaces	176
5.2.1	Interfaces separating two pure liquids	176
5.2.2	Interfaces in the presence of solutes	179
5.3	Adsorption of solutes to interfaces.....	182
5.3.1	Definition of surface excess concentration	182
5.3.2	Relationship between adsorbed and bulk solute concentrations	184
5.3.3	Stipulating interfacial properties of surface-active solutes	187
5.3.4	Adsorption kinetics	187

5.4	Electrical characteristics of interfaces	191
5.4.1	Origin of interfacial charge	191
5.4.2	Ion distribution near a charged interface	193
5.4.3	Factors influencing interfacial electrical properties of emulsions	198
5.4.4	Characterization of interfacial electrical properties	199
5.5	Interfacial composition and its characterization.....	199
5.5.1	Factors influencing interfacial composition	199
5.5.2	Characterization of interfacial composition in emulsions	202
5.6	Interfacial structure.....	204
5.6.1	Factors influencing interfacial structure	204
5.6.2	Characterization of interfacial structure in emulsions	208
5.7	Interfacial tension and its measurement.....	214
5.7.1	Factors influencing interfacial tension	214
5.7.2	Characterization of interfacial tension	214
5.8	Interfacial rheology	221
5.8.1	Factors influencing interfacial rheology	221
5.8.2	Characterization of interfacial rheology	222
5.9	Practical implications of interfacial phenomena	225
5.9.1	Properties of curved interfaces	225
5.9.2	Contact angles and wetting	226
5.9.3	Capillary rise and meniscus formation	229
5.9.4	Interfacial phenomenon in food emulsions	230
Chapter 6	Emulsion formation.....	233
6.1	Introduction	233
6.2	Overview of homogenization	233
6.3	Flow profiles in homogenizers	236
6.4	Physical principles of emulsion formation.....	237
6.4.1	Droplet disruption	237
6.4.2	Droplet coalescence	246
6.4.3	The role of the emulsifier	248
6.5	Homogenization devices	249
6.5.1	High-speed mixers	249
6.5.2	Colloid mills	250
6.5.3	High-pressure valve homogenizers	251
6.5.4	Ultrasonic homogenizers	253
6.5.5	Microfluidization	255
6.5.6	Membrane and microchannel homogenizers	256
6.5.7	Homogenization efficiency	257
6.5.8	Comparison of homogenizers	259
6.6	Factors that influence droplet size.....	261
6.6.1	Emulsifier type and concentration	261
6.6.2	Energy input	263
6.6.3	Properties of component phases	263
6.6.4	Temperature	264
6.7	Demulsification.....	265
6.7.1	Nonionic surfactants	265
6.7.2	Ionic surfactants	266
6.7.3	Biopolymer emulsifiers	266

6.7.4	General methods of demulsification	267
6.7.5	Selection of most appropriate demulsification technique	267
6.8	Future developments.....	267
Chapter 7	Emulsion stability	269
7.1	Introduction	269
7.2	Thermodynamic and kinetic stability of emulsions.....	270
7.2.1	Thermodynamic stability	270
7.2.2	Kinetic stability	272
7.3	Gravitational separation	273
7.3.1	Physical basis of gravitational separation	274
7.3.2	Methods of controlling gravitational separation	284
7.3.3	Experimental characterization of gravitational separation	286
7.4	General features of droplet aggregation	289
7.4.1	Droplet–droplet encounters	290
7.4.2	Film thinning	290
7.4.3	Thin film formation	291
7.4.4	Film rupture	291
7.5	Flocculation	292
7.5.1	Physical basis of flocculation	292
7.5.2	Methods of controlling flocculation	298
7.5.3	Structure and properties of flocculated emulsions	305
7.5.4	Experimental measurement of flocculation	309
7.6	Coalescence	310
7.6.1	Physical basis of coalescence	311
7.6.2	Methods of controlling coalescence	319
7.6.3	Factors affecting coalescence	320
7.6.4	Measurement of droplet coalescence	322
7.7	Partial coalescence	324
7.7.1	Physical basis of partial coalescence	325
7.7.2	Methods of controlling partial coalescence	327
7.7.3	Experimental characterization of partial coalescence	329
7.8	Ostwald ripening	330
7.8.1	Physical basis of Ostwald ripening	331
7.8.2	Methods of controlling Ostwald ripening	333
7.8.3	Experimental characterization of Ostwald ripening	335
7.9	Phase inversion	335
7.9.1	Physical basis of phase inversion	336
7.9.2	Methods of controlling phase inversion	337
7.9.3	Characterization of phase inversion	338
7.10	Chemical and biochemical stability	339
Chapter 8	Emulsion rheology	341
8.1	Introduction	341
8.2	Rheological properties of materials	342
8.2.1	Solids	342
8.2.2	Liquids	345
8.2.3	Plastics	351
8.2.4	Viscoelastic materials	353

8.3	Measurement of rheologic properties.....	356
8.3.1	Simple compression and elongation	357
8.3.2	Shear measurements	360
8.3.3	Empirical techniques	364
8.4	Rheologic properties of emulsions.....	365
8.4.1	Dilute suspensions of rigid spherical particles	366
8.4.2	Dilute suspensions of fluid spherical particles	367
8.4.3	Dilute suspensions of rigid nonspherical particles	368
8.4.4	Dilute suspensions of flocculated particles	370
8.4.5	Concentrated suspensions of nonflocculated particles in the absence of long-range colloidal interactions	372
8.4.6	Suspensions of nonflocculated particles with repulsive interactions	374
8.4.7	Concentrated suspensions with attractive interactions: flocculated systems	376
8.4.8	Emulsions with semisolid continuous phases	380
8.5	Computer simulation of emulsion rheology	381
8.6	Major factors influencing emulsion rheology	382
8.6.1	Disperse phase volume fraction	382
8.6.2	Rheology of component phases	383
8.6.3	Droplet size	384
8.6.4	Colloidal interactions	384
8.6.5	Droplet charge	385
8.7	Future Trends.....	386
Chapter 9 Emulsion flavor		389
9.1	Introduction	389
9.1.1	Physicochemical processes	389
9.1.2	Physiologic processes	390
9.1.3	Psychologic processes	390
9.1.4	General aspects.....	390
9.2	Flavor partitioning.....	391
9.2.1	Partitioning between a homogenous liquid and a vapor.....	391
9.2.2	Influence of flavor ionization	394
9.2.3	Influence of flavor binding on partitioning	395
9.2.4	Influence of surfactant micelles on partitioning	397
9.2.5	Partitioning in emulsions in the absence of an interfacial membrane.....	397
9.2.6	Partitioning in emulsions in the presence of an interfacial membrane.....	399
9.3	Flavor release.....	401
9.3.1	Overview of physicochemical process of flavor release	401
9.3.2	Release of nonvolatile compounds (taste)	402
9.3.3	Release of volatile compounds (aroma)	407
9.4	Emulsion mouthfeel	415
9.5	Measurement of emulsion flavor	417
9.5.1	Analysis of volatile flavor compounds	417
9.5.2	Analysis of nonvolatile flavor compounds	419
9.5.3	Sensory analysis	421
9.6	Overview of factors influencing emulsion flavor.....	422
9.6.1	Disperse phase volume fraction	422

9.6.2	Droplet size	424
9.6.3	Interfacial characteristics	426
9.6.4	Oil phase characteristics	427
9.6.5	Aqueous phase characteristics	428
9.7	Concluding remarks and future directions	429
Chapter 10	Appearance	431
10.1	Introduction	431
10.2	General aspects of optical properties of materials	432
10.2.1	Interaction of light with matter	432
10.2.2	Human vision	438
10.2.3	Quantitative description of appearance	438
10.3	Mathematical modeling of emulsion color	439
10.3.1	Calculation of scattering characteristics of emulsion droplets	440
10.3.2	Calculation of spectral transmittance or reflectance of emulsions	442
10.3.3	Relationship of tristimulus coordinates to spectral reflectance and transmittance	445
10.3.4	Influence of polydispersity	446
10.3.5	Numerical calculations of emulsion color	446
10.3.6	Influence of measurement cell	449
10.4	Measurement of emulsion color	450
10.4.1	Spectrophotometric colorimeters	451
10.4.2	Trichromatic colorimeters	453
10.4.3	Light scattering	454
10.4.4	Sensory analysis	454
10.5	Major factors influencing emulsion color	454
10.5.1	Droplet concentration and size	455
10.5.2	Relative refractive index of droplets	456
10.5.3	Colorant type and concentration	456
10.5.4	Factors affecting color of real food emulsions	458
10.6	Concluding remarks and future directions	458
Chapter 11	Characterization of emulsion properties	461
11.1	Introduction	461
11.2	Testing emulsifier effectiveness	461
11.2.1	Emulsifying capacity	462
11.2.2	Emulsion stability index	463
11.3	Microstructure and droplet size distribution	465
11.3.1	Microscopy	465
11.3.2	Static light scattering	475
11.3.3	Dynamic light scattering and diffusing wave spectroscopy	481
11.3.4	Electrical pulse counting	485
11.3.5	Sedimentation techniques	487
11.3.6	Ultrasonic spectrometry	488
11.3.7	Nuclear magnetic resonance	492
11.3.8	Neutron scattering	493
11.3.9	Dielectric spectroscopy	495
11.3.10	Electroacoustics	495
11.4	Disperse phase volume fraction	495
11.4.1	Proximate analysis	495

11.4.2	Density measurements	496
11.4.3	Electrical conductivity	498
11.4.4	Alternative techniques	499
11.5	Droplet crystallinity	499
11.5.1	Dilatometry	499
11.5.2	Nuclear magnetic resonance	501
11.5.3	Thermal analysis	504
11.5.4	Ultrasonics	506
11.6	Droplet charge	508
11.6.1	Particle electrophoresis	508
11.6.2	Electroacoustics	510
11.7	Droplet interactions	512
Chapter 12	Food emulsions in practice	515
12.1	Introduction	515
12.2	Milk and cream	515
12.2.1	Composition	515
12.2.2	Microstructure	518
12.2.3	Production	519
12.2.4	Physicochemical properties	520
12.2.5	Dairy products	522
12.3	Beverage emulsions	526
12.3.1	Composition	526
12.3.2	Microstructure	529
12.3.3	Production	530
12.3.4	Physicochemical properties	530
12.4	Dressings	533
12.4.1	Composition	534
12.4.2	Microstructure	537
12.4.3	Production	539
12.4.4	Physicochemical properties	539
	References	545
	Index	597
