Part I Traceability, safety and quality	
1 Developing traceability systems across the food supply chain: an overview	3
<i>A. Furness, AIM UK and K. A. Osman, Centre for Automatic Identification and Intelligent Systems, UK</i>	
1.1 Introduction	3
1.2 Accommodating multi-functional traceability requirements	6
1.3 Item-specific data capture	10
1.4 The EAN.UCC coding system	12
1.5 Data carrier technologies	15
1.6 Linking item-attendant data and database information ...	20
1.7 The FOODTRACE project	21
1.8 Conclusions	24
2 Using traceability systems to optimise business performance	26
<i>F. Verdenius, Wageningen University and Research Centre, The Netherlands</i>	
2.1 Introduction: the FoodPrint approach	26
2.2 Key concepts in traceability	27
2.3 Traceability in food chains	30
2.4 Factors affecting traceability systems	32
2.5 The FoodPrint model for developing traceability systems	35
2.6 Phases in the development of a traceability system	41
2.7 Case studies	45
2.8 Conclusions	49
2.9 References	51

3	Optimising supply chains using traceability systems	52
	<i>F.-P. Scheer, Wageningen University and Research Centre, The Netherlands</i>	
3.1	Goals and benefits with quality-oriented tracking and tracing systems	52
3.2	Demand and supply chain management	55
3.3	Product loss and out-of-stock levels	56
3.4	Causes of product loss and out-of-stock	57
3.5	Measures to control product loss and out-of-stock	60
3.6	Demand and supply chain management optimisation	62
3.7	Conclusions	63
3.8	References	64
 Part II Building traceability systems		
4	Modelling food supply chains for tracking and tracing	67
	<i>L. Hulzebos and N. Koenderink, Wageningen University and Research Centre, The Netherlands</i>	
4.1	Introduction	67
4.2	Developing a process model	68
4.3	Creating a tracking and tracing model	74
4.4	Process and product issues in tracking and tracing modelling	79
4.5	Future trends	85
4.6	Conclusions	87
4.7	References	87
5	Dealing with bottlenecks in traceability systems	88
	<i>N. Koenderink and L. Hulzebos, Wageningen University and Research Centre, The Netherlands</i>	
5.1	Introduction	88
5.2	Case study: forest fruit quark	89
5.3	FoodPrint terminology	94
5.4	Four types of bottleneck	98
5.5	Analysing and resolving bottlenecks	101
5.6	Future trends	106
5.7	Conclusions	106
6	Including process information in traceability	107
	<i>M. Klafft, HU Berlin, Germany, J. Huen, C. Kuhn, E. Huen and S. Wößner, Fraunhofer Institut für Produktionstechnik und Automatisierung, Germany</i>	
6.1	Introduction: benefits for the industry and the consumer	107
6.2	Using process information to improve quality	108
6.3	Methods for collecting and storing information	110
6.4	Statistical methods for data analysis	119
6.5	Conclusions	121

6.6	Future trends	122
6.7	Sources of further information and advice.....	122
6.8	Bibliography	124
7	Traceability of analytical measurements	127
	<i>M. F. Camões, University of Lisbon, Portugal, and R. Bettencourt da Silva, Directorate General of Crop Protection, Portugal</i>	
7.1	Introduction: the role of analytical measurements in evaluating product quality	127
7.2	Problems in tracing and comparing analytical measurements	130
7.3	Improving comparability of analytical measurements.....	141
7.4	Future trends	142
7.5	References	144
 Part III Traceability technologies		
8	DNA markers for animal and plant traceability	147
	<i>J. A. Lenstra, Utrecht University, The Netherlands</i>	
8.1	Introduction.....	147
8.2	DNA variation at the species and subspecies level	148
8.3	Traceability below the species level.....	151
8.4	Future trends	158
8.5	Acknowledgement	159
8.6	References	159
9	Electronic identification, DNA profiling and traceability of farm animals	165
	<i>A. Poucet, C. Korn, U. Meloni, I. Solinas, G. Fiore and M. Cuypers, European Union Joint Research Centre, Italy, G. Caja and A. Sánchez, University of Barcelona, Spain, A. Fonseca, P. Pinheiro and C. Roquete University of Evora, Portugal</i>	
9.1	Introduction.....	165
9.2	Electronic identification methods in tagging and traceability of cattle	166
9.3	Technical basis for animal identification by radio frequency (RFID)	168
9.4	EID equipment for animal identification on farms and in slaughterhouses	175
9.5	Data management	179
9.6	Future trends	181
9.7	References	182

10 Storing and transmitting traceability data across the food supply chain	183
<i>R. Vernède and I. Wienk, Wageningen University and Research Centre, The Netherlands</i>	
10.1 Introduction	183
10.2 Product identification data carrier technology	184
10.3 Condition measuring data carrier technology	187
10.4 Quality measuring carrier technology	189
10.5 Data collection	189
10.6 Data processing	190
10.7 Practical applications of data carrier technology	192
10.8 Conclusions	197
10.9 References	198
11 Data carriers for traceability	199
<i>A. Furness, AIM UK</i>	
11.1 Introduction	199
11.2 Linear barcode systems and EAN.UCC adopted symbologies	201
11.3 Two-dimensional coding	210
11.4 EAN.UCC numbering system	217
11.5 Chip-based data carrier technologies and radiofrequency identification (RFID)	224
11.6 The electronic product code (EPC) system	232
11.7 Summary	237
<i>Index</i>	239
