

## CONTENTS

Preface	ix
1. Food Emulsions : An Introduction	1
2. Surfactant Association Structures, Microemulsions, and Emulsions in Foods : An Overview	7
<b>MICROEMULSIONS IN FOODS</b>	
3. Solubilization of Water and Water-Soluble Compounds In Triglycerides	26
4. Emulsions of Reversed Micellar Phases and Aqueous Dispersions of Cubic Phases of Lipids : Some Food aspects	44
5. Preparation of 2-Monoglycerides	51
6. Dioctyl Sodium Sulfosuccinate-Sorbitan Monolaurate Microemulsions	62
<b>EMULSIONS IN FOODS</b>	
7. Sucrose Esters as Emulsion Stabilizers	82
8. Liposarcosine-Based Polymerizable and Polymeric Surfactants	103
9. Competitive adsorption and Protein-Surfactant Interactions In Oil-in-water Emulsions	114
10. Protein-Glyceride Interaction : Influence on Emulsion Properties	130
11. Thermodynamics of Interfacial Films in Food Emulsions	138
12. Function of $\alpha$ -Tending Emulsifiers and Proteins in Whippable Emulsions	146
13. Evaluation of Stabilizers for Synthetic Vesicles and Milk Fat Globules under Drying Stress	161
14. Interaction of Proteins with Sucrose Esters	182

15. Importance of Hydrophobicity of proteins in Food Emulsions	193
16. Excellent Emulsifying Properties of Protein-Dextran Conjugates	213
17. Effect of Polysaccharide on Flocculation and Creaming in Oil-in-Water Emulsions	230
18. Effects of Electrolyte on Stability of Concentrated Toluene in Water Miniemulsions : An Electroacoustic Study	247
Author Index	261
Affiliation Index	261
Subject Index	261
