# Contents

<b>Chapter 1</b>	Introduction .....	1
<b>Chapter 2</b>	Background Basics.....	7
Units. Dimensions. Conversions. Common Terms. Definitions .....		7
Main Systems of Units .....		7
Basic Dimensions and Their Units.....		7
Selected Derived Dimensions and Their Units .....		8
Conversion of Units .....		12
Dimensional Equation .....		12
Concentration .....		14
Gases and Vapors .....		16
Mass Balance .....		16
Law of Conservation of Mass.....		16
Making a Mass Balance.....		17
Total Mass Balance .....		17
Component Balance .....		18
Pearsons Square Rule.....		21
Pearsons Rule Calculations.....		21
Summary Notes for Mass Balance .....		23
Energy Balance.....		24
Sensible Heat.....		25
Phase Change .....		25
Heat Transfer Fundamentals.....		28
Radiation .....		28
Conduction .....		29
Steady-State Conduction .....		29
Convection.....		36
Steady-State Convection .....		36
Natural Convection .....		37
Forced Convection .....		37
Boiling Heat Transfer.....		40
Condensation Heat Transfer.....		41
Overall Heat Transfer Coefficient.....		41
Unsteady-State Conduction.....		43
Combined Unsteady-State Conduction and Convection .....		44
Fluid Flow.....		48
Fluid Flow Regimes .....		48
Moving Fluids .....		49
Static Liquids .....		50

Thermal Process Calculations .....	90
General Method.....	91
Improved General Method.....	94
Ball Formula Method.....	96
Come-Up Time Correction and Ball Process Time .....	99
Stumbo Formula Method.....	100
Pham's Formula Method.....	101
Thermal Process Calculations for Pasteurization .....	101
Microflora in Canned Fruits .....	108
Process Calculations .....	110
Formula Methods .....	110
Commercial Canning Operations.....	111
Raw Material Selection.....	111
Washing.....	114
Sorting/Grading.....	115
Blanching .....	116
Prevention of Fruit Browning .....	117
Peeling/Preparation .....	118
Mechanical Peeling .....	118
Lye Peeling.....	119
Filling.....	119
Type of Covering Liquid.....	120
Container Specifications and Types.....	120
Container Sizes .....	121
Can Lacquer.....	121
Exhausting.....	121
Can Double Seaming/Closing.....	124
Container Coding.....	125
Retort Operations .....	125
Cooling.....	126
Labeling and Storage .....	126
Thermal Process Equipment.....	126
Retort and Retort Operations.....	126
Retort Type.....	131
Typical Operation.....	131
Heating Medium .....	132
Overpressure Processing.....	133
Example Calculation for Achieving Proper Steam/Air Mixture.....	133
Example Calculation of Heat Transfer from Steam/Air Mixture .....	134
Commercial Retorts.....	135
Batch Retorts.....	135
Steam Retort.....	135
Steam/Air Retort.....	135
Water Spray Retort.....	138
Full Water Immersion.....	139
Crateless Retort .....	139

Relative Humidity.....	181
Atmospheric Concentration.....	181
Structural Aspects.....	181
Common Storage Systems.....	181
Ventilated Storage.....	181
Refrigerated (Regular Atmosphere, RA) Storage.....	182
Control Atmosphere (CA) Storage Systems.....	182
Storage Needs.....	184
Refrigeration Requirements.....	185
Modified Atmosphere Packaging.....	185
Food Freezing.....	187
Thermophysical Properties of Food Undergoing Freezing.....	187
Freezing Point.....	187
Density.....	189
Heat Capacity.....	190
Latent Heat.....	192
Thermal Conductivity.....	192
Thermal Diffusivity.....	194
Comparison between the Freezing and Thawing Processes.....	194
The Freezing Process.....	196
Nature of the Crystallization Process.....	197
Nucleation.....	198
Super-Cooling.....	198
Crystal Growth.....	198
Crystal Size.....	198
Size of Ice Crystals and Texture.....	198
Freezing Time and Rate.....	200
Freezing Time.....	200
Freezing Rate.....	201
Estimation of Freezing Time/Rate.....	201
Freezing Time Models.....	203
Plank's Model.....	203
International Institute of Refrigeration (IIR) Modification.....	206
Thawing Time Predictions.....	207
An Important Aspect of Plank's Equation.....	207
Freezing Methods.....	208
Air Freezing.....	209
Plate Freezing.....	210
Liquid-Immersion Freezing.....	210
Cryogenic Freezing.....	210
Commercial Freezing Equipment.....	211
Cabinet Freezer.....	211
Tunnel Freezer.....	212
Tray Tunnel Freezer.....	212
Drag-Through Tunnel Freezer.....	214
Multipass Tunnel Freezer.....	214

Contact Dryers .....	284
Drum/Roller Dryers.....	284
Contact-Sorption Drying .....	287
Jet-Spouted Bed Dryers.....	288
Vacuum Dryer .....	2 9 1
Freeze Dryer.....	293
Foam Drying .....	295
Explosion Puffing.....	296
Novel Drying Techniques.....	296
Microwave Drying .....	296
Radiofrequency Drying.....	298
Infrared Drying .....	298
Refractance Drying.....	298
Acoustic Drying .....	300
Energy Aspects and Thermal Efficiency .....	300
Thermal Efficiency .....	300
Reduction of the Evaporation Load.....	302
Optimization of the Temperature and Moisture Content at the Inlet and Outlet.....	302
Reduction or the Partial Recovery of Heat Losses from the Exhaust or Dryer Surface.....	302
Supply of Heat to the Dryer by Other Means Instead of Heated Air .....	303
Quality and Storage Stability of Dehydrated Foods.....	304
Changes Taking Place during Drying.....	304
Moisture Migration and Stability Isotherms .....	305
Trends.....	3.1 6
<b>Chapter 6</b> Separation and Concentration.....	317
Introduction.....	3.1 7
Evaporation .....	320
General Principles and Applications.....	320
Evaporation Systems.....	3 2 1
Liquid Characteristics .....	323
Design Calculation of Evaporators.....	323
Membrane Processing.....	324
General Principles and Applications.....	324
Dead-End vs. Cross-Flow Filtration .....	325
Classification of Membrane Systems (MS).....	327
Reverse Osmosis.....	328
Nanofiltration.....	331
Ultrafiltration .....	331
Microfiltration.....	331
Electrodialysis.....	332
Pervaporation .....	335
Membrane Materials .....	336

Cellulose Acetate.....	336
Polymeric Membrane.....	336
Composite or Inorganic Membrane.....	336
Ion-Exchange Membrane.....	336
Membrane Configurations.....	337
Plate-and-Frame.....	337
Tubular.....	337
Spiral Wound.....	341
Hollow Fibers.....	341
Membrane Performance.....	341
Effect of Operating Parameters on Flux.....	342
Transmembrane Pressure.....	343
Flow Rate.....	343
Nature and Concentration of the Feed.....	344
Temperature.....	344
Modes of Operation.....	344
Limitations of Membrane Processes and Solutions.....	345
Freeze Concentration.....	346
General Principles and Applications.....	346
Ice Crystal Nucleation and Growth.....	351
Separation Techniques.....	353
Typical Industrial Process.....	353
Multiple-Stage Systems.....	354
Physical Characteristics.....	355
Extraction.....	355
Liquid–Liquid Extraction.....	355
Solid–Liquid Extraction.....	356
Solid Extraction by Expression.....	356
Solid Extraction by Solvent.....	357
Supercritical Fluid Extraction.....	360
Osmotic Dehydration (OD).....	363
General Principles and Advantages.....	363
Factors Influencing Osmotic Dehydration.....	365
Nature, Size, and Shape of the Biological Material.....	366
Nature, Type, and Concentration of the Osmotic Agent.....	369
Process Parameters (Temperature, Time, Agitation, Pretreatment).....	370
Typical Industrial Processes.....	371
Future Trends.....	377
<b>Appendix A: Conversion Factors.....</b>	<b>379</b>
Mathematical Review — Logarithm.....	382
Logarithmic Notation.....	382
Properties of Logarithms.....	382
Operations on Logarithms.....	383
Calculating the Slope of a Line.....	383

**Appendix B: Thermophysical Properties.....385**  
**Appendix C: Heat and Mass Transfer Charts .....389**  
**References Cited .....399**  
**Additional Reading Material.....405**  
**Index.....407**
