## **Part I Key drivers for waste management and co-product recovery in food processing**

<b>1 Waste minimization, management and co-product recovery in food processing: an introduction</b> .....	
<i>K. Waldron, Institute of Food Research, UK</i>	
1.1 Introduction: food processing waste – the scale of the problem .....	
1.2 Diversification and risk .....	
1.3 Biological basis of biowastes .....	
1.4 Legislation .....	
1.5 Implementation of the waste hierarchy concept in relation to food processing co-products and wastes ....	15
1.6 High-value components and whole-waste exploitation .....	17
1.7 Future trends .....	18
1.8 Sources of further information and advice .....	19
1.9 References .....	19

<b>Consumer interests in food processing waste management and co-product recovery</b> .....	21
<i>L. J. Frewer and B. Gremmen, Wageningen University, The Netherlands</i>	
2.1 Introduction: consumer interests as a key driver to improve waste management in food processing .....	21
2.2 Societal issues related to sustainability .....	23
2.3 Implications for food processors .....	31
2.4 Future trends .....	33
2.5 References .....	33
<b>Part II Optimising manufacturing to minimise waste in food processing</b>	
<b>3 Chain management issues and good housekeeping procedures to minimise food processing waste</b> .....	39
<i>R. Sherman, North Carolina State University, USA</i>	
3.1 Introduction .....	39
3.2 Key reasons to minimise waste .....	40
3.3 Chain management to minimise waste .....	42
3.4 Good housekeeping procedures to minimise raw material waste .....	43
3.5 Effective implementation of measures to minimise waste .....	51
3.6 Casestudy .....	53
3.7 Future trends .....	55
3.8 Sources of further information and advice .....	56
3.9 Further reading .....	57
3.10 References .....	58
<b>4 Process optimisation to minimise energy use in food processing</b> .....	59
<i>Jiří Klemeš and Simon J. Perry, The University of Manchester, UK</i>	
4.1 Introduction: energy use in food processing .....	59
4.2 Energy saving and minimisation: process integration1 pinch technology. combined heat and power minimisation and combined energy and water minimisation .....	61
4.3 Renewables in the food industry .....	69
4.4 Overview of selected case studies .....	70
4.5 A case study: sugar processing .....	72
4.6 Further studies .....	77
4.7 Sources of further information and advice .....	81
4.8 References .....	87

<b>5</b>	<b>Process optimisation to minimise water use in food processing</b> .....	90
	<i>Jiří Klemeš and Simon J. Perry. The University of Manchester. UK</i>	
5.1	Introduction: water use and wastage in food processing .....	90
5.2	How to minimise water usage and wastewater treatment – present state-of-the-art and future trends .....	93
5.3	Overview of selected case studies .....	100
5.4	Sources of further information and advice .....	110
5.5	References .....	113
<b>Part III Key issues and technologies for food waste separation and co-product recovery</b>		
<b>6</b>	<b>The importance of microbiological risk management in the stabilisation of food processing co-products</b> .....	119
	<i>T. F. Brocklehurst, Institute of Food Research. UK</i>	
6.1	Introduction: importance of microbiological risk management in the stabilisation of co-products .....	119
6.2	Strategies for microbiological risk management .....	120
6.3	Strategies for controlling micro-organisms: methods of preservation .....	127
6.4	Future trends .....	143
6.5	References .....	145
<b>7</b>	<b>Effects of postharvest changes in quality on the stability of plant co-products</b> .....	149
	<i>M. E. Saltveit, University of California. USA</i>	
7.1	Introduction .....	149
7.2	Changes during fruit ripening .....	150
7.3	Response to adverse environments .....	155
7.4	Changes in composition .....	160
7.5	Future trends .....	162
7.6	Sources of further information and advice .....	163
7.7	Reference .....	164
<b>8</b>	<b>The potential for destructuring of food processing waste by combination processing</b> .....	165
	<i>A. C. Smith, Institute of Food Research. UK</i>	
8.1	Introduction .....	165
8.2	Effect of destructuring on foods and their components .....	167
8.3	Lessons from other industries .....	175

8.4	Preservation processes .....	176
8.5	Tools for breakdown/disassembly .....	179
8.6	Processes .....	182
8.7	Examples of combination processing .....	189
8.8	Future trends .....	191
8.9	Sources of further information and advice .....	192
8.10	References .....	192
<b>9</b>	<b>Enzymatic extraction and fermentation for the recovery of food processing products</b> .....	<b>198</b>
	<i>K. Bélafti-Bakó, University of Veszprém, Hungary</i>	
9.1	Introduction and key issues .....	198
9.2	Biocatalytic methods .....	199
9.3	Future trends .....	210
9.4	Sources of further information and advice .....	211
9.5	References .....	211
<b>10</b>	<b>Supercritical fluid extraction and other technologies for extraction of high-value food processing co-products</b> .....	<b>217</b>
	<i>T. H. Walker, P. Patel and K. Cantrell, Clemson University, USA</i>	
10.1	Introduction .....	217
10.2	Key reasons for use of supercritical fluid extraction (SFE) .....	220
10.3	Supercritical fluid extraction .....	220
10.4	Modeling of solubility and mass transfer .....	232
10.5	Other technologies .....	242
10.6	Future trends .....	245
10.7	Acknowledgements .....	246
10.8	References .....	246
<b>11</b>	<b>Membrane and filtration technologies and the separation and recovery of food processing waste</b> .....	<b>258</b>
	<i>B. Ditgens, University of Bonn, Germany</i>	
11.1	Introduction .....	258
11.2	Established membrane technologies .....	260
11.3	New fields of application .....	267
11.4	Conclusions .....	277
11.5	Notation .....	278
11.6	References .....	278
<b>12</b>	<b>Separation technologies for food wastewater treatment and product recovery</b> .....	<b>282</b>
	<i>H. M. El-Mashad and R. Zhang, University of California, USA</i>	
12.1	Introduction .....	282

12.2	Principles for separation .....	283
12.3	Separation and recovery technologies .....	283
12.4	Future trends .....	297
12.5	Conclusions .....	298
12.6	Sources of further information and advice .....	298
12.7	References .....	299

**Part IV Waste management in particular food industry sectors and recovery of specific co-products**

<b>13</b>	<b>Waste management and co-product recovery in red and white meat processing .....</b>	<b>305</b>
	<i>P. Roupas, K. De Silva and G. Smithers, CSIRO-Food Science Australia, Australia; and A. Ferguson, Alamanda Enterprises Pty Ltd, Australia</i>	
13.1	Introduction .....	305
13.2	Waste minimization and processing efficiency.....	306
13.3	Responsible waste disposal .....	308
13.4	Wastevalue-addition .....	314
13.5	Conclusions and future trends .....	326
13.6	Sources of further information and advice .....	327
13.7	References .....	328
<b>14</b>	<b>Waste management and co-product recovery in dairy processing .....</b>	<b>332</b>
	<i>R. J. Durham and J. A. Hourigan, University of Western Sydney, Australia</i>	
14.1	Introduction .....	332
14.2	Worldwide dairy production trends .....	333
14.3	Current status of waste problems faced by the dairy industry .....	337
14.4	Cleaner production in the dairy industry .....	347
14.5	Co-product recovery in dairy processing .....	349
14.6	Improving end-waste management in dairy processing .....	369
14.7	Future trends .....	376
14.8	Sources of further information and advice .....	376
14.9	References .....	377
<b>15</b>	<b>Waste management and co-product recovery in fish processing .....</b>	<b>388</b>
	<i>S. Goldhor, Center for Applied Regional Studies, USA, and J. Regenstein, Cornell University, USA</i>	
15.1	Introduction .....	388
15.2	Co-product recovery and development .....	388

x Contents

15.3	Shellfish .....	410
15.4	Future trends .....	413
15.5	Sources of further information and advice .....	414
15.6	References .....	415
<b>16</b>	<b>Recovery and reuse of trimmings and pulps from fruit and vegetable processing .....</b>	<b>417</b>
	<i>M. Panouillé, M.-C. Ralet, E. Bonnin and J.-F. Thibault, Institut National de la Recherche Agronomique, France</i>	
16.1	Introduction .....	417
16.2	Origin and general characterisation of the by-products .....	418
16.3	Use of the whole by-products .....	421
16.4	Recovery of functional biopolymers .....	423
16.5	Upgrading of the mono-/oligomeric components .....	431
16.6	Conclusion and future trends .....	438
16.7	Sources of further information and advice .....	439
16.8	References .....	439
<b>17</b>	<b>High-value co-products from plant foods: nutraceuticals, micronutrients and functional ingredients .....</b>	<b>448</b>
	<i>F. A. Tomás Barberan. CEBAS (CSIC), Spain</i>	
17.1	Introduction .....	448
17.2	Residues generation and key reasons for co-product recovery .....	449
17.3	Phytochemicals present in plant food residues .....	450
17.4	Uses of plant food residues as sources for phytochemical extracts .....	453
17.5	Important sources of high-value co-products .....	455
17.6	Examples of phytochemical extracts from plant foodwastes .....	462
17.7	Technological processes for phytochemicals extraction from residues .....	463
17.8	Safety issues .....	465
17.9	Future trends .....	465
17.10	Conclusions .....	465
17.11	References .....	466
<b>18</b>	<b>High-value co-products from plant foods: cosmetics and pharmaceuticals .....</b>	<b>470</b>
	<i>A. Femenia, Universitat de les Illes Balears, Spain</i>	
18.1	Introduction .....	470
18.2	Key reasons for exploiting plant-derived compounds from co-products .....	472

18.3	Recovery of plant-based co-products for use in cosmetics and pharmaceuticals .....	474
18.4	Future trends .....	489
18.5	Sources of further information and advice .....	490
18.6	References .....	491
<b>19</b>	<b>Natural dyes from food processing wastes</b> .....	<b>502</b>
	<i>T. Bechtold A. Mahmud-Ali and R. Mussak, University of Innsbruck, Austria</i>	
19.1	Introduction .....	502
19.2	Natural dyes in technical textile dyeing operations ....	502
19.3	The extraction step .....	512
19.4	Sources for natural dyes – results of a screening for sources in food processing .....	514
19.5	Natural dyes from food processing wastes – representative examples .....	517
19.6	Future trends .....	529
19.7	Sources of further information and advice .....	530
19.8	References .....	530
<b>20</b>	<b>Improving waste management and co-product recovery in vegetable oil processing</b> .....	<b>534</b>
	<i>M. Arienzo and P. Violante, Universita degli Studi di Napoli Federico II, Italy</i>	
20.1	Introduction .....	534
20.2	Key reasons to improve waste management in vegetable oil processing .....	539
20.3	Co-product recovery in vegetable oil processing .....	542
20.4	Reducing waste in vegetable oil production .....	554
20.5	Improving end waste management in vegetable oil production .....	556
20.6	Future trends .....	565
20.7	References .....	566
 <b>Part V Minimising disposal: wastewater and solid waste management in the food industry</b>		
<b>21</b>	<b>Treatment of food processing wastewater</b> .....	<b>573</b>
	<i>D. Bolzonella and F. Cecchi. University of Verona, Italy. and P. Pavan, Ca Foscari University, Italy</i>	
21.1	Introduction .....	573
21.2	Food wastewater production and characteristics .....	574
21.3	Analysis of conventional technologies for treatment of food processing wastewater .....	578

21.4	Future trends .....	587
21.5	References .....	592
<b>22</b>	<b>Dewatering systems for solid food processing waste</b> .....	<b>597</b>
	<i>V. Orsat and G. S. Vijaya Raghavan, McGill University, Canada</i>	
22.1	Introduction .....	597
22.2	Waste conditioning .....	598
22.3	Dewatering methods .....	598
22.4	Combining dewatering methods .....	605
22.5	An environmental and economic choice .....	606
22.6	Conclusions .....	607
22.7	References .....	607
<b>23</b>	<b>Fermentation, biogas and biohydrogen production from solid food processing</b> .....	<b>611</b>
	<i>C. L. Hansen and D. Y. Cheong, Utah State University, USA</i>	
23.1	Introduction: fermentation, biogas and biohydrogen production from food waste .....	611
23.2	Key reasons to consider using anaerobic processes ....	612
23.3	Biochemical and microbiological principles of the anaerobic process: hydrolysis, acidogenesis, methanogenesis .....	615
23.4	Environmental and operational variables of anaerobic treatment .....	617
23.5	High-rate anaerobic bioconversion system .....	624
23.6	Requirements for high-rate anaerobic bioconversion systems .....	624
23.7	Single-stage high-rate anaerobic digesters .....	625
23.8	Continuously stirred tank reactor (CSTR) .....	630
23.9	Separation of anaerobic processes in reactor systems .....	630
23.10	Biohydrogen production by anaerobic fermentation .....	632
23.11	Producing other chemicals and useful products from food waste .....	637
23.12	Future trends .....	640
23.13	References .....	642
	<i>Index</i> .....	<i>649</i>
