1. Applications of Oxygen-ion-conducting Solid Electrolytes	1
1.1 Early applications	1
1.2 Basic Structure of an Oxygen-ion-conducting Solid Electrolyte Cell	1
1.3 Thermodynamic Studies	4
1.4 Miscellaneous Applications	4
1.5 Monitoring O ₂ in Car Exhaust Gases – Lambda Sensors	4
1.6 Potentiometric Analysis of Hot Gases	7
References	14
2. The Pellistor Catalytic Gas Detector	17
2.1 Introduction	17
2.2 The Pellistor	17
2.3 Testing	25
2.4 Implications of Instrument Standards and Sensor Applications	26
References	31
3. The Theory of Poisoning of Catalytic Flammable Gas-sensing Elements	32
3.1 Introduction	32
3.2 Theory	34
3.3 Application of the theory	40
3.4 Conclusions	49
References	49
4. Characterisation of Semiconductor Gas Sensors	51
4.1 Introduction	51
4.2 The Rationale of Sensor Characterisation	52
4.3 Experimental	58
4.4 Results	60
4.5 Problems	68
4.6 Conclusions	69
References	70
5. Conduction and Gas Response of Semiconductor Gas Sensors	71
5.1 Introduction	71
5.2 Bulk Conductivity Changes in Semiconducting Oxides	73
5.3 Surface Conductivity Changes	80
5.4 Effects of Gas Transport and Reaction on Sensor Response	102
5.5 Summary	108
Appendix 5.1 Mass balance treatment to derive conductivity – $p(\text{O}_2)$ relationships for Different defect chemistries	109
Appendix 5.2 Surface barrier layers and thin film devices: basic results	111
Appendix 5.3 Partial pressure dependence of conductivity, coverage and depletion layer Parameters	113
Appendix 5.4 Simple modelling of the coupled effects of gas diffusion and reaction on Sensor response	116
References	119
6. The Role of Precious Metal Catalysts	124
6.1 Introduction	124
6.2 Theory	124

6.3	Observed Responses	127
6.4	Conclusions	136
	References	137
7.	Non-Nerstian Potential-generating Gas Sensors	139
7.1	Introduction	139
7.2	Seebeck Sensors	139
7.3	Mixed Potential Sensors	144
7.4	Semiconductor Surface Potential Sensors	147
7.5	Future Developments	149
	References	149
8.	Oxide Surfaces: The Basic Processes of Sensor Behaviour	151
8.1	Introduction	151
8.2	Sensor surfaces: Morphology	153
8.3	Surface on an Atomic Scale: Surface Energy and Surface Rumpling	154
8.4	Defects at Surfaces or on Surfaces	157
8.5	Oxide-Oxide Interfaces and Grain Boundaries	159
8.6	Near-surface Defects and Barrier Layers	162
8.7	Oxide-metal Interfaces: Bonding and Structure	163
8.8	Sensor Responses to Different Gases: Understanding by Classification	164
8.9	Conclusions	166
	References	167
9.	Surface Analysis of Gas Sensor Materials	169
9.1	Introduction	169
9.2	Surface Analytical Techniques	169
9.3	Surface analytical Applications	181
9.4	Conclusions	196
	References	196
10.	State of the Art and Future Prospects for Solid State Gas Sensors	198
10.1	Introduction	198
10.2	Requirements for Sensors	201
10.3	Current Technology – Galvanic Sensors	205
10.4	Current Technology – Semiconductor Sensors	213
10.5	Future Developments	224
10.6	Conclusions	233
