Foreword, ix

The Commission on Oils, Fats and Derivatives of the IUPAC, x

Warning, xvii

Quality assurance (analytical quality control), xviii

Section 1: Oleaginous Seeds and Fruits

.001 Preparation of the sample for analysis

Determination of the Physical Characteristics

.101 Determination of the impurities

111 Grinding

Analysis of the Seeds and Fruits

1.121 Determination of moisture and volatile matter content

1.122 Determination of oil content (extraction method)

1.123 Determination of oil content (low resolution nuclear magnetic resonance method)

Analysis of the Oil Extracted from the Seeds and Fruits

Determination of acidity of oil

Analysis of the Residues Remaining after Oil Extraction

1.171 Determination of total hexane content in extraction meals

1.172 Determination of 'free' hexane content in extraction meals

Section 2: Oils and Fats

2.001 Preparation of the sample

Determination of the Physical Characteristics

2.101 Determination of the density

2.102 Determination of the refractive index

2.103 Spectrophotometric determination of the colour

2.121 Determination of solidification point of water-insoluble fatty acids (titre)

Determination of the Bömer value (B.V.)

2.132 Determination of the cooling curve of fats

Determination of the dilatation of fats

2.150 Solid content determination in fats by NMR (low resolution nuclear magnetic resonance)
(ex 2.323)

Determination of the Chemical Characteristics

2.201 Determination of the acid value (A.V.) and the acidity

2.202 Determination of the saponification value (S.V.)

2.203 Determination of the ester value (E.V.)

2.204 Determination of volatile acids (Reichert-Meissl, Polenske and Kirschner values)

2.205 Determination of the iodine value (I.V.)

2.206 Determination of di- and tri-unsaturated fatty acids by ultraviolet spectrophotometry

2.207 Determination of content of isolated *trans*-unsaturated compounds by infrared spectrophotometry

CONTENTS

- 2.208 Determination of *trans*-octadecanoic acids by thin-layer chromatography and gas-liquid chromatography
- 2.209 Determination of polyunsaturated fatty acids with a *cis,cis* 1,4-pentadienoic structure
- 2.210 Determination of fatty acids in the 2-position in the triglycerides of oils and fats
- 2.241 Determination of the hydroxyl value (OH.V)
- 2.251 Determination of epoxy-group oxygen
- Determination of the Principal Constituents*
- 2.301 Preparation of the fatty acid methyl esters
- 2.302 Gas-liquid chromatography of fatty acid methyl esters
- 2.303 Determination of *n*-3 and *n*-6 unsaturated fatty acids in vegetable oils and fats by capillary gas-liquid chromatography
- 2.304 Capillary column gas-liquid chromatography of fatty acid methyl esters
- 2.310 Determination of butyric acid
- 2.311 Determination of erucic acid
- 2.312 Determination of linoleic acid
- 2.321 Determination of mono-, di- and triglycerides by column chromatography
- 2.322 Determination of monoglycerides
- 2.323 Determination of triglycerides by gas-liquid chromatography
- 2.324 Determination of the composition of triglycerides in vegetable oils in terms of their partition number by high performance liquid chromatography (HPLC)
- 2.325 Determination of the individual triglycerides in oils and fats by high performance liquid chromatography
- 2.326 Determination of mono- and diglycerides by capillary gas chromatography
- Determination of the Other Natural Constituents*
- 2.401 Determination of the unsaponifiable matter
- 2.402 Qualitative examination and determination of the total sterols by their digitonides
- 2.403 Identification and determination of sterols by gas-liquid chromatography
- 2.404 Determination of the total sterols content
- 2.411 Identification and determination of tocopherols (ex 2.404)
- 2.421 Determination of phosphorus
- 2.422 Determination of the phosphoric acid test (PAT) value of raw linseed oil
- 2.423 Determination of phosphorus by direct graphite furnace atomic absorption spectrometry
- 2.431 Determination of the erythrodiol content
- 2.432 Determination of tocopherols and tocotrienols in vegetable oils and fats by high performance liquid chromatography
- Determination of the Quality and the Stability*
- 2.501 Determination of the peroxide value (P.V.)
- 2.502 Determination of the 'oxidized acids' (insolubilization method)
- 2.503 Determination of the 'oxidized acids' (thin-layer chromatographic method)
- 2.504 Determination of the *p*-anisidine value (*p*-A.V.)
- 2.505 Evidence of purity and deterioration from ultraviolet spectrophotometry
- 2.506 Determination of stability (the modified 'Swift test')
- 2.507 Determination of polar compounds in frying fats

CONTENTS

- 2.508 Determination of polymerized triglycerides in oils and fats by high performance liquid chromatography
2.531 Determination of the 2-thiobarbituric acid value: direct method

Determination of the Foreign Substances and the Additives

- 2.601 Determination of the moisture and volatile matter
2.602 Determination of water (entrainment method)
2.603 Determination of small quantities of water (modified Karl Fischer method)
2.604 Determination of the insoluble impurities
2.605 Determination of ash content
2.606 Determination of polyethylene type polymers
Determination of 'hexane' residues in fats and oils
2.608 Determination of benzo[*a*]pyrene in edible oils and fats by reversed phase high performance liquid chromatography
2.611 Detection of mineral oils in vegetable and animal oils and fats
2.621 Detection of propyl-, octyl- and dodecyl-gallates, butylated hydroxyanisole and butylated hydroxytoluene
2.622 Determination of butylated hydroxyanisole and butylated hydroxytoluene
2.631 Determination of copper, iron and nickel by direct graphite furnace atomic absorption spectrometry
2.632 Determination of lead by direct graphite furnace atomic absorption spectrometry
2.641 Determination of organochlorine pesticides
2.642 Determination of antioxidants by high performance liquid chromatography

Determination of Fats in Related Compounds

- 2.801 Determination of total fat in margarines

Section 3: Glycerines

Determination of the Physical Characteristics

- 3.101 Determination of the relative density 20/20 in air and of the conventional mass per unit volume
3.102 Measurement of colour in Hazen units (platinum–cobalt scale)

Determination of the Chemical Characteristics

- 3.111 Determination of alkalinity or acidity
3.121 Determination of the glycerol content (titrimetric method)
3.122 Determination of the acidity and the saponification equivalent

Determination of Foreign Substances and Additives

- 3.131 Determination of water content (Karl Fischer method)
3.135 Determination of ash content
3.136 Determination of arsenic content (photometric method employing silver diethyldithiocarbamate)
3.137 Calculation of matter (organic) non-glycerol–MONG
3.138 Determination of the sulphated ash content

CONTENTS

Section 4: Alkaline Soaps

Determination of the Chemical Characteristics

- 4.201 Determination of the total alkali content
- 4.202 Determination of the free caustic alkali content
- 4.203 Determination of the total free alkali content
- 4.211 Determination of the 'total crude fatty acids' content
- 4.212 Determination of the rosin content
- 4.213 Determination of the unsaponified saponifiable + unsaponifiable matter content, of the unsaponifiable matter content, and of the unsaponified saponifiable matter content

Determination of Foreign Substances and Additives

- 4.301 Determination of the free glycerol content (titrimetric method)
- 4.302 Determination of low free glycerol content (spectrophotometric method)
- 4.311 Determination of moisture and volatile matter content (oven method)
- 4.312 Determination of the water content (azeotropic distillation method)
- 4.313 Determination of the ethanol-insoluble matter content
- 4.321 Determination of the chloride content
- 4.322 Determination of the chloride content (potentiometric method)
- 4.331 Determination of the EDTA (sequestering agent) content (titrimetric method)

Section 5: Lecithins

Determination of the Chemical Characteristics

- 5.201 Determination of the acidity of lecithins (ex 2.201)
- 5.205 Determination of the iodine value (ex 2.205)

Determination of the Principal Constituents

- 5.301 Determination of phospholipids by thin-layer chromatography and phosphorus analysis
- 5.302 Determination of the phospholipid profile of lecithins by high performance liquid chromatography

Determination of Other Natural Constituents

- 5.421 Determination of the phosphorus content of lecithins (ex 2.421)

Determination of the Quality and the Stability

- 5.501 Determination of the peroxide value (ex 2.501)
- 5.502 Determination of the acetone-insoluble material in lecithins

Determination of the Foreign Substances and the Additives

- 5.603 Determination of small quantities of water by modified Karl Fischer method (ex 2.603)
- 5.604 Determination of the toluene-insoluble material in lecithins

Section 6: Emulsifiers

- 6.001 Determination of the ester-emulsifiers components after hydrolysis and silylation by gas chromatography
- 6.002 Determination of mono- and diglycerides by capillary gas chromatography (method 2.326)
