1. Characterization of Petroleum Waxes	1
Introduction	1
Work of Section IV	3
Distillate and Residual Waxes	7
Behavior During Solidification or Melting	9
Chemical Composition	14
2. Characterization of Petroleum Waxes by the Behavior of Blends with Oil or Wax	20
Introduction	20
Properties of Waxes Studied	21
Staining Tendency of Wax-Oil Blends	21
Ductility of Wax-Oil Blends	24
Flexibility of Wax-Oil Blends	25
Penetration of Blends of Waxes and Oils	26
General Remarks	29
Conclusions	31
Discussion	31
3. Wax Analysis by Gas Chromatography	33
Introduction	33
Evaluation of Gas Chromatographic Methods	34
Experimental	37
Conclusion	40
Discussion	41
4. Determination of Oil in Wax by Wide Line Nuclear Magnetic Resonance	43
Introduction	43
Discussion	44
Summary	49
Discussion	49
5. Composition Versus Expansion of Petroleum Waxes	51
Introduction	51
Experimental Procedure and Sample Description	52
Results	54
Conclusions	74
Discussion	76
6. Identification of Some Chemical Components of Waxes and Their Effect on Performance	
Characteristics	78
Laboratory Separation Procedures	79
Experimental	81
Conclusions	93
Discussion	94
7. Molecular Arrangement and the Properties of petroleum Waxes	95
Crystal Structure of Normal Paraffins	95
Crystal Growth of Normal Paraffins	96
Waxes Studied	99
Experimental Procedure	100
Unit Cell Dimensions	102

	Determination of Crystallinity	102
	Experimental Results	103
	Discussion	110
8.	An Instrument for Measuring the Seal Strength of Waxed Papers at Various Separation Angles	112
	The Test Instrument	113
	Experimental Procedures	115
	Discussion	116
9.	Adhesive and Cohesive Aspects of Wax Laminations and Heat Seals	121
	Adhesion – Nature of Forces	122
	Conditions for Good Adhesion	124
	Cohesion – General	126
	Cohesive Aspects	126
	Directional Effects	128
	Concentration of Applied Stress	130
	Discussion	134
10.	Commercial Paraffin Waxes – How Composition Affects Competence	135
	Introduction	135
	Experimental	136
	Discussion of Results	139
	Composition vs. Physical Properties	141
	Composition vs. Performance	143
	Effect of Additives	143
11.	Determination of Polyethylene in Petroleum Wax Blends	145
	Introduction	145
	Detection of Polyethylene in Petroleum Wax Blends	147
	General Procedure for Analyzing Polyethylene-Petroleum Wax Blends	148
	Experimental	153
	Discussion	154
	Conclusions	156
	Discussion	157
12.	Quantitative Analysis for Polyethylene and Microcrystalline Wax in Paraffin Wax	159
	Introduction	160
	Polyethylene Content – Distillation Method	161
	Polyethylene Content – Extraction	164
	Microcrystalline Wax Content – Refractive Index Method	169
	Microcrystalline Wax Content – Distillation Method	169
	Conclusion	174
	Discussion	175
13.	Analysis of Polyethylene Modified Wax Blends	176
	Current FDA Status of Polyethylene Blending Resins	176
	Experimental	177
	Discussion of Results	183
	Conclusions	186
	Discussion	187
14.	Effect of Low Molecular Weight Ethylene / Vinyl Acetate Copolymers upon Paper Coatings	187
	Introduction	188
	Coating Technique	189
	Physical Test Methods	190
	Functional Test Methods	190
	Results	190
	Water Vapor Transmission Rates	196
	Heat Sealability	198

Blocking	199
Viscosity	199
Conclusions	201
Discussion	201
Index	203
