

## CONTENTS

	Page
1. On the Molecular Nature of Petroleum Asphaltenes	1
2. The Concept of Asphaltenes	17
3. Coal-Derived Asphaltenes : History and Some Current Observations	29
4. Structural Differences Between Asphaltenes Isolated from Petroleum and from Coal Liquid	39
5. Consequences of the Mass Spectromeric and Infrared Analysis of oils and Asphaltenes for the Chemistry of Coal Liquefaction	53
6. Structure-Related Properties of Athabasca Asphaltenes and Resins as Indicated by Chromatographic Separation	83
7. Asphaltenes in Petroleum Asphalts: Composition and Formation	119
8. Size Characterization of Petroleum Asphaltenes and Maltenes	137
9. Composition of H-Coal Asphaltenes and Preasphaltenes: Acid-Base Separations and Oxidative Degradation	155
10. Molecular Interactions Involving Coal-Derived Asphaltenes	173
11. Lewis Acids Assisted Degradation of Athabasca Asphaltene	183
12. Programmed Pyrolysis, Programmed Combustion, and Specific Nitrogen and Sulfur Detection : A New Tool for Studying Heavy Ends of Petroleum and Bitumens	203
13. Characteristics of Tar Sand bitumen Asphaltenes as Studied by Conversion of Bitumen by Hydropyrolysis	219
14. Composition of Asphaltenes from Coal Liquids	237
Index	253
