

CONTENTS

	Page
Introduction	1
Augmenting Petroleum Production	3
Petroleum – Demand and Supply	4
Primary Production of Petroleum	5
Enhanced Oil Recovery	5
The Promise and Potential of EOR	9
References	15
Secondary Recovery of Crude Oil	16
Initial Production of Oil	17
Pressure Maintenance	17
Waterflooding	18
Immiscible Gas Injection	30
References	31
Tertiary Recovery of Crude Oil – Miscible Techniques	32
Introduction	33
Hydrocarbon Miscible Flooding	33
CO ₂ Miscible Flooding	35
Polymer –Augmented Waterflooding	42
Micellar-Polymer Flooding	47
Alkaline Flooding	61
References	63
Tertiary Recovery of Crude Oil – Thermal Techniques	65
Introduction	65
Extent of Thermal Recovery Projects	66
Cyclic Steam Injection	67
Steam Drive	73
In Situ combustion	80
Necessity for Materials Research	88
Conclusions	88
References	89
Mining of Petroleum	91
History of Petroleum Mining	92
Petroleum Engineering Technology	92
Mining Engineering Technology	95
Petroleum Mining Technology	100
References	123
Conceptual Mining Systems for Selected Fields	124
Potential Targets for Oil Mining Operations	124
Underground Mining Methods	127
Surface Mining Systems	132
Processing	134
Environmental Factors	137
Candidate Fields and Selected Mining Systems	138
Underground Operations	139
Surface Operations	148

Economic Evaluation	157
General Conclusions	159
References	161
Another Method – Oil Recovery by Nuclear Explosion	162
Introduction	162
Application of Nuclear Explosions	163
The Safety of Nuclear Explosions	164
U.S.S.R. Industrial Experience in Nuclear Stimulation	165
Underground Reservoir Construction	165
Application of EOR Techniques to Achieve Production Potential	166
Tertiary Production Forecasts	168
Selecting an Appropriate Technique	170
Profitability Considerations	184
References	185
Appendix – EOR Projects Used in Development of Screening Guide	186
Chemical and Research Requirements of EOR	193
Material Requirements	193
Research Requirements	202
References	203
Environmental Aspects	204
Impacts of Enhanced Oil Recovery	204
Chemical Hazards of EOR	206
Effects of EOR on Groundwater	214
Effects of EOR on Air Quality	226
Hazards of EOR by Physiographic Region	228
Environmental Issues Relative to Mining	233
References	235
Status of EOR Technology – Summary of Field Tests and Projects	236
Field Tests	236
Project Development	242
References	248
Recovery of heavy Oil	249
Heavy Oil Resources	249
Recovery Methods	249
Solvent Stimulation in California	250
San Francisco Energy Research Center Laboratory process	255
Thermal Recovery of Heavy Oils in Missouri and Kansas	259
Field Testing of Vapor Therm Process in Missouri	264
References	273
Use of Solvents and Explosives to Recover Heavy Oil	275
Solfrac Recovery Method	275
Heavy Oil Reservoirs	276
Field Research by Bartlesville Energy Research Center	278
Laboratory Investigation	284
Production	287
Conclusion	293
References	293
Chemical Flooding – Some Projects and Research	294
Maraflood Oil Recovery Process	294
Fluid System Design and Injection	295
Fluid Production	297
Performane monitoring	300

Economic Monitoring	301
Refinability of Crude Oil Produced by EOR	302
Determining Surfactant Concentrations in EOR Crude Oils	302
Features and Mechanism of Alkaline Flooding	306
Tests of California Crudes in Alkaline Solution	307
Improving Mobility Control Agents for Surfactant / Polymer Flooding	313
References	319
Thermal Recovery – Some Projects and Research	321
Simultaneous Air and Water In Situ combustion process	321
Steamflooding a Heavy Oil Reservoir Unresponsive to Cyclic Stimulation	326
Steamflooding Additives to Reduce Oil to Steam Ratios	329
References	335
CO ₂ Flooding – Studies on Temperature Effect and CO ₂ Reserves	336
Role of Reservoir Temperature in CO ₂ Flooding	336
Availability and Cost of Carbon Dioxide	246
References	353
The Future of Enhanced Oil Recovery	355
Constraints to EOR Development	355
Necessity for Federal Participation	360
Increasing Domestic Oil Production	361
Industry's Choice	366
References	367
Glossary	368
Sources Utilized	376
