Part 1 Alkylation and Polymerization

Chapter 1.1. NExOCTANE™ Technology for Isooctane Production *Ronald Birkhoff and Matti Nurminen* 1.3

Introduction	1.3
History of MTBE	1.4
NExOCTANE Background	1.4
Process Chemistry	1.4
NExOCTANE Process Description	1.5
NExOCTANE Product Properties	1.6
Product Yield	1.7
Utility Requirements	1.8
NExOCTANE Technology Advantages	1.9

Chapter 1.2. STRATCO Effluent Refrigerated H₂SO₄ Alkylation Process *David C. Graves* 1.11

Introduction	1.11
Process Description	1.12
Technology Improvements	1.18
H ₂ SO ₄ Alkylation Process Comparison	1.20
Commercial Data	1.23
References	1.24

Chapter 1.3. UOP Alkylene™ Process for Motor Fuel Alkylation *Cara Roeseler* 1.25

Introduction	1.25
Alkylene Process	1.25
Alkylene Performance	1.28
Engineering Design and Optimization	1.29
Alkylene Process Economics	1.30
Summary	1.30
Bibliography	1.31

Feedstock Considerations	2.8
Case Study	2.9
Commercial Experience	2.10
Bibliography	2.11

Chapter 2.2. UOP Sulfolane Process *Thomas J. Stoodt and Antoine Negiz*2.13

Introduction	2.13
Solvent Selection	2.15
Process Concept	2.15
Description of the Process Flow	2.16
Feedstock Considerations	2.20
Process Performance	2.20
Equipment Considerations	2.21
Case Study	2.22
Commercial Experiences	2.22
Bibliography	2.23

Chapter 2.3. UOP Thermal Hydrodealkylation (THDA) Process *Thomas J. Stoodt and Antoine Negiz*2.25

Introduction	2.25
Process Description	2.25
Process Economics	2.27

Chapter 2.4. BP-UOP Cyclar Process *Lubo Zhou*2.29

Introduction	2.29
Process Chemistry	2.29
Description of the Process Flow	2.31
Feedstock Considerations	2.31
Process Performance	2.33
Equipment Considerations	2.34
Case Study	2.36
Commercial Experience	2.36
Bibliography	2.37

Chapter 2.5. UOP Isomar Process *Patrick J. Silady*2.39

Introduction	2.39
Process Chemistry	2.39
Description of the Process Flow	2.42
Feedstock Considerations	2.43
Process Performance	2.43
Equipment Considerations	2.44
Case Study	2.45
Commercial Experience	2.45
Bibliography	2.46

Chapter 2.6. UOP Parex Process *Scott E. Commissaris*2.47

Introduction	2.47
Parex Versus Crystallization	2.47

Process Performance	2.50
Feedstock Considerations	2.50
Descriptions of the Process Flow	2.50
Equipment Considerations	2.52
Case Study	2.53
Commercial Experience	2.53
Bibliography	2.54

Chapter 2.7. UOP Tatoray Process *Antoine Negiz
and Thomas J. Stoodt***2.55**

Introduction	2.55
Process Chemistry	2.56
Description of the Process Flow	2.58
Feedstock Considerations	2.59
Process Performance	2.60
Equipment Considerations	2.60
Case Study	2.62
Commercial Experience	2.62
Conclusions	2.63
References	2.63

Part 3 Catalytic Cracking

Chapter 3.1. KBR Fluid Catalytic Cracking Process *Phillip K. Niccum
and Chris R. Santner***3.3**

Introduction	3.3
Feedstocks	3.5
Products	3.5
Process Descriptions	3.6
Process Variables	3.22
Advanced Process Control	3.26
Catalyst and Chemical Consumption	3.29
Investment and Utilities Cost	3.32
Bibliography	3.32

Chapter 3.2. Deep Catalytic Cracking, the New Light Olefin Generator
*Warren S. Letzsch***3.35**

Basis	3.35
Process Description	3.36
Catalyst	3.40
Feedstocks	3.41
Operating Conditions	3.41
DCC Product Yields	3.41
DCC Integration	3.43
References	3.44

Chapter 3.3. UOP Fluid Catalytic Cracking Process
*Charles L. Hemler and Lester F. Smith***3.47**

Introduction	3.47
Development History	3.47

Process Chemistry	3.51
Thermodynamics of Catalytic Cracking	3.53
Catalyst History	3.54
Process Description	3.55
Modern UOP FCC Unit	3.60
Feedstock Variability	3.64
Process Costs	3.67
Market Situation	3.68
References	3.69

Chapter 3.4. Stone & Webster—Institut Français du Pétrole Fluid RFCC Process *Warren S. Letzsch* **3.71**

History	3.71
Process Description	3.72
RFCC Feedstocks	3.80
RFCC Catalyst	3.82
Two-Stage Regeneration	3.84
Mechanical Design Features	3.91
FCC Revamp to R2R (Second-Stage Regeneratoin Addition)	3.92
References	3.93

Part 4 Catalytic Reforming

Chapter 4.1. UOP Platforming Process *Mark Lapinski, Lance Baird, and Robert James* **4.3**

Process Evolution	4.3
Process Chemistry	4.5
Process Variables	4.14
Continuous Platforming Process	4.17
Case Studies	4.21
UOP Commercial Experience	4.25
RZ-Platforming	4.25

Part 5 Dehydrogenation

Chapter 5.1. UOP Oleflex Process for Light Olefin Production *Joseph Gregor and Daniel Wei* **5.3**

Introduction	5.3
Process Description	5.3
Dehydrogenation Plants	5.5
Propylene Production Economics	5.7

Chapter 5.2. UOP Pacol Dehydrogenation Process *Peter R. Pujadó* **5.11**

Introduction	5.11
Process Description	5.12
Pacol Process Improvements	5.15
Yield Structure	5.17
Commercial Experience	5.17

Commercial Application	8.17
The Future	8.21
References	8.21

Chapter 8.2. Selective Hydrogenation Processes*Beth McCulloch, Charles Luebke, and Jill Meister***8.25**

Introduction	8.25
The KLP Process	8.26
The SHP Unit	8.26
The Hüls SHP-CB Process	8.28
Commercial Experience	8.28
Economics and Operating Costs	8.28
References	8.28

Chapter 8.3. UOP Unionfining Technology *Peter Kokayeff***8.31**

Introduction	8.31
Process Chemistry	8.31
Catalyst	8.35
Process Flow	8.37
Unionfining Applications	8.37
Investment	8.40
UOP Hydroprocessing Experience	8.40
Bibliography	8.40

Chapter 8.4. UOP RCD Unionfining Process *Daniel B. Gillis***8.43**

Introduction	8.43
Market Drivers for RCD Unionfining	8.43
Catalyst	8.44
Process Chemistry	8.46
Process Description	8.47
Operating Data	8.51
Commercial Installations	8.52

Chapter 8.5. UOP Catalytic Dewaxing Process *Hermant Gala***8.53**

Introduction	8.53
Process Description	8.54
Process Flow	8.54
Yield Patterns	8.55
Investment and Operating Expenses	8.55
Commercial Experience	8.56
References	8.57

Chapter 8.6. UOP Unisar Process for Saturation of Aromatics*H. W. Gowdy***8.59**

Introduction	8.59
Application to Diesel Fuels	8.59
Process Description	8.61
Process Applications	8.65

Chapter 8.7. Chevron Lummus Global Ebullated Bed Bottom-of-the-Barrel Hydroconversion (LC-Fining) Process *Avinash Gupta* **8.67**

Introduction	8.67
Development and Commercial History	8.68
Process Chemistry	8.70
LC-Fining Reactor	8.72
L-C Fining Process Flow Schematics	8.72
L-C fining Technology Advantages	8.75
Commercial Operations	8.78
Process Flexibility	8.78
Typical Range of Operating Parameters	8.80
Wide Range of Feedstocks	8.80
Yields and Product Quality	8.80
Catalysts	8.82
Investment Costs	8.83

Part 9 Isomerization

Chapter 9.1. UOP Bensat Process *Dana K. Sullivan* **9.3**

Process Discussion	9.4
Process Flow	9.5
Catalyst and Chemistry	9.5
Feedstock Requirements	9.6
Commercial Experience	9.6

Chapter 9.2. UOP Butamer Process *Nelson A. Cusher* **9.7**

Introduction	9.7
Process Description	9.8
Process Chemistry	9.8
Process Variables	9.9
Process Contaminants	9.9
Isomerization Reactors	9.10
Process Flow Scheme	9.10
Commercial Experience	9.11

Chapter 9.3. UOP Penex Process *Nelson A. Cusher* **9.15**

Introduction	9.15
Process Discussion	9.15
Process Flow	9.16
Process Applications	9.18
Thermodynamic Equilibrium Considerations, Catalysts, and Chemistry	9.20
Feedstock Requirements	9.22
Commercial Experience	9.23

Chapter 9.4. UOP TIP and Once-Through Zeolitic Isomerization Processes *Nelson A. Cusher* **9.29**

Introduction	9.29
O-T Zeolitic Isomerization Process	9.31
TIP Process	9.35

DAO Processing	10.52
Pitch Properties and Uses	10.54
Integration of SDA in Modern Refineries	10.56
Process Economics	10.59
References	10.60

Chapter 10.5. UOP IsoSiv Process *Nelson A. Cusher* **10.63**

Introduction	10.63
General Process Description	10.65
Process Perspective	10.66
Detailed Process Description	10.66
Product and By-Product Specifications	10.67
Waste and Emissions	10.67
Process Economics	10.67

Chapter 10.6. Kerosene IsoSiv Process for Production of Normal Paraffins
Stephen W. Sohn **10.69**

General Process Description	10.69
Process Perspective	10.70
Detailed Process Description	10.71
Waste and Emissions	10.73
Economics	10.74
Bibliography	10.74

Chapter 10.7. UOP Molex Process for Production of Normal Paraffins
Stephen W. Sohn **10.75**

Discussion	10.75
Yield Structure	10.76
Economics	10.76
Commercial Experience	10.77

Chapter 10.8. UOP Olex Process for Olefin Recovery
Stephen W. Sohn **10.79**

Discussion	10.79
Commercial Experience	10.81
Economics	10.81

Part 11 Sulfur Compound Extraction and Sweetening

Chapter 11.1 KBR Refinery Sulfur Management *Michael Quinlan* **11.3**

Introduction	11.3
Amine	11.4
Sour Water Stripping	11.7
Sulfur Recovery	11.9
Tailgas Cleanup	11.12

Chapter 11.2. Belco EDV Wet Scrubbing System: Best Available Control Technology (BACT) for FCCU Emission Control 11.15
Edwin H. Weaver and Nicholas Confuorto

- The FCCU—A Unique Process for Emissions Control 11.15
 Controlled Emissions—A Trend toward Lower Levels 11.16
 A Proven Wet Scrubber Design for the FCCU Process 11.16
 Alternate Configurations 11.23
 Scrubber Purge Treatment 11.23
 Reagent Options 11.23
 Reagent Selection Economics 11.26
 Achievable Emissions—A Case History 11.27
 A Wealth of Experience 11.29

Chapter 11.3. UOP Merox Process *G. A. Dziabis* 11.31

- Introduction 11.31
 Process Description 11.31
 Process Chemistry 11.37
 Product Specifications 11.39
 Process Economics 11.39
 Process Status and Outlook 11.39

Chapter 11.4. The S Zorb Sulfur Removal Technology Applied to Gasoline *David Legg and Jason Gislason* 11.43

- Introduction 11.43
 Technology Development 11.44
 Process 11.44
 Chemistry 11.48
 Process Economics and Operational Flexibility 11.49
 Conclusion 11.50

Chapter 11.5. ConocoPhillips S Zorb Diesel Process *Ed Sughrue and John S. Parsons* 11.51

- Introduction 11.51
 Chemistry 11.51
 Sorbent 11.53
 Process Description 11.53
 Process Economics 11.55
 Commercial Experience and Future Plans 11.56

Chapter 11.6. Gasoline Desulfurization *Douglas A. Nafis and Edward J. Houde* 11.57

- Introduction 11.57
 Why FCC Naphtha? 11.58
 Reducing the Sulfur Content of FCC Naphtha 11.59
 FCC Naphtha Pretreating 11.62
 FCC Naphtha Posttreating 11.63
 Olefin Management in Light FCC Naphtha Processing 11.66
 Olefin Management in Heavy FCC Naphtha Processing 11.68

Typical Utility Requirements	12.105
Estimated Investment Cost	12.105
Bibliography	12.105

Part 13 Oxygenates Production Technologies

Chapter 13.1. Hüls Ethers Processes *Steve Krupa and Jill Meister* 13.3

Introduction	13.3
Hüls Ethers Process for MTBE, ETBE, and TAME	13.4
Process Flow	13.5
Yields	13.5
Economics and Operating Costs	13.7
Commercial Experience	13.7

Chapter 13.2 UOP Ethermax Process for MTBE, ETBE, and TAME Production *Steve Krupa, Jill Meister, and Charles Luebke* 13.9

Process Description	13.9
Process Flow	13.10
Yields	13.11
Operating Cost and Economics	13.11
Ethermax Commercial Experience	13.11

Chapter 13.3 UOP Olefin Isomerization *Steve Krupa* 13.13

Introduction	13.13
Description of the Pentosom Process	13.13
Description of the Butesom Process	13.14
Economics	13.17
Commercial Experience	13.17

Chapter 13.4. Oxypro Process *Steve Krupa, Larry Richardson, and Jill Meister* 13.19

Process Description	13.19
Process Flow Scheme	13.19
Yields	13.21
Operating Costs and Economics	13.21
Commercial Experience	13.22

Part 14 Hydrogen Processing

Chapter 14.1. Hydrogen Processing *Alan G. Bridge and Gary L. Hamilton* 14.3

Introduction	14.3
Process Fundamentals	14.14
Process Design	14.34
Process Capabilities	14.46
References	14.65

Part 15 Gas-to-Liquids Technologies**Chapter 15.1 Olefin Production from Methanol** *Peter R. Pujadó and James M. Anderson* **15.3**

Introduction	15.4
MTO Technology	15.6
Economic Basis	15.8
Investment Estimates	15.8
Economic Comparisons	15.11
Economic Sensitivity	15.13
Conclusions	15.14
References	15.14

Chapter 15.2. The Syntroleum® Process of Converting Natural Gas into Ultraclean Hydrocarbons *Larry Weick and Matthew Nimmo* **15.15**

Introduction	15.15
History of Fischer-Tropsch Reaction	15.16
History of the Syntroleum Process	15.16
Process Description	15.16
Advantages of the Syntroleum Process	15.19
Quality of Fuels Produced from Syntroleum Process	15.21
Capital Investment Requirements	15.23
References	15.23

Chapter 15.3. Shell Middle Distillate Synthesis (SMDS) Process *F. J. M. Schrauwen* **15.25**

Gas to Liquids Conversion	15.25
Introduction	15.25
Process Description	15.26
Quality of the Products	15.36
Complex Integration	15.38
Wastes and Emissions	15.38
Future Prospects	15.38
References	15.39

Glossary **G.1**

Abbreviations and Acronyms **A.1**
