	Page
Preface	vii
1. Some Recent Development in the Gas-Phase Pyrolysis of Hydrocarbons	1
2. The Chemical of Aromatic Production via Catalytic Reforming	20
3. Chemistry of Hydrocracking	38
4. Secondary Reactions of Olefins in Pyrolysis of Petroleum Hydrocarbons	68
5. Rate Modeling for the Butane-Butenes System	92
6. Some Problems of the Cracking Mechanism of Hydrocarbons	110
7. The Chemical Refinery in Perspective	123
8. Product Optimization in the Petrochemical Refinery	137
9. The Manufacture of propylene	153
10. Kinetics of the Demethylation of Methycyclohexane	179
11. Catalytic Dehydrogenation of Higher Normal Paraffins to Linear Olefins	193
12. The Octafining Process for Isomerization of C ₈ Aromatics Containing Ethylbenzene	204
13. Process Evaluation of Improved Solvents for Butadiene Recovery	215
14. Tetraethylene Glycol – A Superior Solvent for Aromatics Extraction	228
15. A new Solvent for Aromatics Separation	242
16. Carbon Black from Petroleum Oil	264
17. Petrochemical Feedstocks from Residuals	271
Index	289
