

## CONTENTS

	Page
Preface	11
List of symbols	13
Chapter 1. Selected topics in flow mechanics	25
1.1 Fundamentals of flow in pipes	25
1.2 Gas flow in pipes	29
1.3 Flow of non-Newtonian fluids in pipes	38
1.4 Multiphase flow of liquids and gases	53
1.5 Flow of compressible mediums through a choke	107
Chapter 2. Producing oil wells – (1)	113
2.1 Well testing; inflow performance curves	113
2.2 Flowing wells producing gasless oil	118
2.3 Time course of production parameters	132
2.4 Gas lifting	169
Chapter 3. Producing gas wells	242
3.1 Well testing , inflow performance curves	242
3.2 Well completion ; dimensioning the tubing	251
3.3 Corrosion of gas wells; hydrate formation	255
Chapter 4. Producing oil wells – (2)	258
4.1 Production by bottom-hole pumps	258
Chapter 5. Choice of most economical production methods	366
Chapter 6. Gathering and separation of oil and gas	371
6.1 Line pipes	371
6.2 Valves ; pressure regulators	382
6.3 Internal maintenance of pipelines	398
6.4 Separation of oil and gas	402
6.5 On-lease oil storage	440
6.6 Oil and gas gathering and separation systems	452
Chapter 7. Pipeline transportation of oil	478
7.1 Isothermal flow of a newtonian oil	478
7.2 Non-isothermal flow	491
7.3 Means of improving flow characteristics	533
Chapter 8. Pipeline transportation of natural gas	547
8.1 Physical and physico-chemical properties of natural gas	547
8.2 Temperature of flowing gases	562
8.3 Steady-state flow in pipeline systems	564
8.4 Transient flow in pipeline systems	581
8.5 Computer modelling of gas transmission systems	592
8.6 Pipeline transportation of natural gas ; economics	602
Appendix	608
References	611
Subject index	625
