PART ONE : INDUSTRIAL GAS TREATING	
1. Practice and Problems of Industrial Gas Treating	3
1.1 General Background	3
1.2 Categories of Gas Treating Processes	7
1.3 Industrial Gas Treating Examples	13
1.4 Economic Factors in Gas Treating	26
1.5 Cyclic Capacity Concept	27
1.6 Rate of Mass Transfer	30
1.7 Gas Solubility in Liquids	33
1.8 Chemical and Physical Solubility	39
1.9 Chemistry of Acid Gases	46
1.10 Unfinished Problems in chemical Gas Treating	51
PART TWO : THEORY	
2. Thermodynamics of Gas Treating	59
2.1 Elementary Chemical Thermodynamics	60
2.2 Chemical Thermodynamics of Single-Phase Systems	62
2.3 Gas Treating Systems with Only One Volatile Component	65
2.4 Two Simple Specific Systems	68
2.5 General Features of thermodynamic Modeling	80
2.6 Two Volatile Components	84
2.7 Thermodynamic Selectivity	90
2.8 Henry's Constant in Reactive Liquids	94
2.9 The Dependency of p^* on m and y	96
3. Mass Transfer with Chemical Reaction : Basic Concepts and Mathematical Layout	98
3.1 Basic Concepts	98
3.2 Hydrodynamics	102
3.3 Slow reaction	112
3.4 Fast Reaction	115
3.5 Instantaneous Reaction	117
3.6 Summary	126
3.7 The Effectiveness Concept	127
4. Slow Reaction Regime	129
4.1 Quasi-Steady-State Approximation	130
4.2 The Kinetic Subregime	133
4.3 The Diffusional Subregime	135
4.4 Transition Region	136
4.5 Packed Towers	139
4.6 Slurry Reactors	140
5. Fast Reaction Regime	144
5.1 The Upper Bound	144
5.2 Properties of Fast Reaction Regime	146
5.3 Macroscopic Behavior	149
5.4 Kinetic and Thermodynamic Information	150
5.5 Some Open Problems	152
6. Instantaneous Reaction Regime	154
6.1 The Irreversible Limit in Absorption	154
6.2 Film Theory Equations	158

6.3	Penetration Theory Equations	162
6.4	Macroscopic Behavior	163
7.	Transition Regions	170
7.1	The Slow-Fast Transition	170
7.2	Kinetics	173
7.3	The Fast-Instantaneous Transition	176
7.4	An-Approximate Explicit Equation	181
8.	Simultaneous Mass Transfer	182
8.1	Basic Concepts and Definitions	182
8.2	Simultaneous but Uncoupled Mass Transfer	184
8.3	Irreversible Instantaneous Absorption	186
8.4	General Analysis of the Instantaneous –Instantaneous Regime	190
8.5	The Fast-Instantaneous Regime	192
8.6	Special Cases	194
PART THREE : APPLICATIONS		
9.	Removal of Carbon Dioxide	201
9.1	Process Selection	201
9.2	General Thermodynamics and Chemistry	207
9.3	Hydroxide Solutions	211
9.4	Amine solutions	212
9.5	Carbonate Solutions	228
10.	Removal of Hydrogen Sulfide and Other Sulfur Contaminants	245
10.1	Process Selection	245
10.2	Chemistry and Thermodynamics	252
10.3	Kinetics of Hydrogen Sulfide Removal	258
10.4	Diffusivities in Electrolyte Solutions	262
11.	Dimultaneous and Selective Removal of Hydrogen Sulfide and Carbon Dioxide	266
11.1	Process Selection	267
11.2	Inorganic Salt Solutions	283
11.3	Carbonate Solutions	287
11.4	Organic Solutions	289
12.	Removal of Sulfur Dioxide	293
12.1	Process Selection	295
12.2	Chemistry and Thermodynamics	301
12.3	Mass Transfer – General Analysis	307
12.4	Throwaway Processes	311
12.5	Regenerable Processes	314
PART FOUR : INDUSTRIAL PROBLEMS		
13.	Laboratory Experiments	319
13.1	Vapor – Liquid Equilibrium Data	320
13.2	Measurement of Henry's Law Constant	325
13.3	Other Thermodynamic Data	331
13.4	Mass Transfer Data	334
13.5	Analysis of Rate Data	353
14.	Process Selection	356
14.1	Available Processes	357
14.2	Selection of Treating Systems for CO ₂ and H ₂ S Removal	367
14.3	Energy Requirements and Process Integration in CO ₂ Removal	379
14.4	Selection of Flue Gas Desulfurization Processes	385
14.5	Future Trends in Gas Treating	387

15.	Design and Scaleup	289
15.1	Minimum Liquid Rate	389
15.2	Minimum Steam Rate	396
15.3	Tower Sizing	401
15.4	Desorption	413
15.5	Pilot Plant Data	416
15.6	Selection of Contactor Type	426
15.7	Flowsheet Design	431
15.8	Technological Problems	437
	References and Notes	446
	Appendix	465
	Gas Treating Patents	465
	Index	485
