

CONTENTS AND SUBJECT INDEX

A SURVEY OF POTENTIAL CHLORINE PRODUCTION PROCESSES.	1
Introduction	1
Diaphragm Cell and Mercury Cell	1
The Membrane Cell	3
Conversion of Waste Hydrogen Chloride to Chlorine.	3
Oxidation of Ammonium Chloride	3
The Membrane Cell	4
Membrane Cell Process	4
Use of the Membrane Cell with Either the Oxygen Cathode or a Catalytic Hydrogen Electrode	8
Use of the Membrane Cell to Produce Coproducts Other than Caustic Soda	11
Chlorine from Hydrogen Chloride.	12
Shell Hydrogen Chloride Catalytic Oxidation Process.	12
Kel-Chlor Catalytic Oxidation Process.	16
Mobay Direct Electrolysis Process.	19
Oxidation of Ammonium Chloride with Nitrogen Dioxide	24
ICI Ammonium Nitrate Process.	24
Nitrogen Dioxide/Ammonium Chloride High Temperature Process.	26
Comparisbh of the Two Processes	29
Processes Which Appear thus Far to Be Noncompetitive.	29
β -Alumina Membrane Process (Japanese Molten Salt Process)	29
Downs Cell	31
Kellogg Modified Deacon Process	32
Catalytic Oxidation of Hydrogen Chloride Using Metal Oxide Catalysts	33
Electrolysis of Hydrochloric Acid with Metal Chloride Catalysts	35
Chlorine from Oxidation of Ferric Chloride Salt Complex	35
Metaizeau Process	38
Chlorine from Salt and Sulfur Trioxide.	39
Chlorine from Hydrogen Chloride and Sulfur Trioxide	42
Oxidation of Hydrogen Chloride with Hydrogen Peroxide	46
Chlorine from Alkali Metal Chlorides and Nitrogen Oxide Compounds	48
Allied Chemical Company Salt and Nitric Acid Process.	50

French Salt-Kaolin Process	51
Du Pont High Temperature Silica and Salt Process	52
Israeli Process for Chlorine from Magnesium Chloride.	53
Hydrogen-Chloride-Based High Temperature Arc Process	53
References.	54
DIAPHRAGM CELLS.	57
Improved Asbestos Diaphragms.	57
Addition of Magnesium Compounds.	58
Incorporating Polyelectrolytes Insoluble in Aqueous Alkali Metal Halide Solutions	59
Polymeric Fluorocarbon Binders.	60
Diaphragm Containing Thermoplastic Resin	65
Impregnation with Divinylbenzene and Vinylpyridine Copolymer	67
Treatment with a Silicate Containing Magnesium	69
Deposition of New Diaphragm Material.	70
Asbestos-Free Diaphragms.	73
Fluorinated Polymer with Modified Surface Plies.	74
Tetrafluoroethylene with Microstructure of Nodes Interconnected by Fibrils	76
Hydrophilic Fluorocarbon Resin in Hydrophobic Matrix	78
Thermoplastic Fibers Requiring No Bonding.	79
Support Fabric Impregnated with Nonfibrillic Silica	79
Support Material Impregnated with Sand and Binding Agent	81
Support Fabric Coated with Electroconductive Metal.	82
Degassing Procedure	84
Cell Design	85
Non-Melt-Processable Polymer Diaphragm Connected by Melt-Processable Polymer.	85
Non-Melt-Processable Diaphragm in Form of Endless Belt	87
Monopolar Filter Press Cell.	89
Lightweight Filter Press Cell	90
Automatic Response to Variation in Current Density or Feed Rate	93
Reduced Gap Between Electrodes.	95
Electrode Assembly with Flexible Gas Baffle Conductor	96
Recycling of Electrolyte	97
Tandem Operation of Diaphragm and Membrane Cells.	100
Vacuum-Assisted Assembly.	101
Supports and Seals	104
Supporting Diaphragms in Close Contact with Cathodes.	104
Vented Diaphragm Support.	105
Cell Liner and Seal Device.	109
Sealing Member Resistant to Heat and Chemicals	111
Testing Methods	113
In Situ Reference Electrode	113
Method to Determine Suitability of a Diaphragm	116
Brine Feed, Additives, and Corrosion Prevention	117
Brine-Introduction Tube Mounted Within Larger-Diameter Tube.	117
Feed System for Slurries of Alkali Metal Chlorides.	118
Transition Metal Compounds Added to Catholyte Liquor.	121
Prevention of Equipment Corrosion	122

MERCURY CATHODE CELLS	123
Adjustment of Anode-Cathode Spacing	123
Monitoring a Plurality of Control Parameters	123
Comparison with Predetermined Standards	125
Method for Detecting Incipient Short Circuits	127
Electrodes and Other Cell Components	129
Vertical Liquid Electrode	129
Flexible Cover	130
Decomposition of Alkali Metal Amalgams	132
Unpurified Salt as Raw Material	133
Polyphase Packing	134
Surface-Active Agent Embedded in Polymer Matrix	136
 BIPOLAR CELLS AND ELECTRODES	 138
Cell Design and Process Control	138
Reduction of Titanium Hydride Formation by Changing Direction of Current	138
Titanium Plate Explosion-Bonded to Iron Plate	140
Sinuous Flow Path Preventing Stagnant Areas	143
Vertical Anodes and Cathodes	144
Bipolar Cell with Bipolar Intermediate Electrode	146
Metal Anode Connected to Metal Cathode	148
Gas-Lifting of Catholyte	150
Vertical Multiunit Electrolyzers Utilizing Gas Lift	153
Production of Chlorine Under Pressure	154
Liquor Emission Control Process	157
Electrodes	159
Conductive Pins Connecting Anode to Cathode Through Composite Partition	159
Elongated Metal Anode and Cathode	161
Electrode Assembly	163
Hybrid Bipolar Electrode	164
Hollow Cathode	166
Titanium Alloy	168
Other Cell Components	169
Separating Web	169
Intercell Connector	172
Spring-Loaded Intercell Connectors	174
Bipolar Electrode Backplates	176
 IMPROVED ELECTRODES	 178
Metal Anodes	179
Layered Electrode	179
Expandable Anode	180
Converting Box Anodes to Expandable Anodes	182
Valve Metals Coated with Doped Mixed Metal Oxides	185
Base of Passivable Metal with Covering Layer of Activating Substance	186
Polymer-Laminated Surface	187
Anode with Membrane and Noble Metal or Oxide Coating	189
Porous Anode Separator	191
Louvered Anode	193
Inclined Louvered Anode	195

Closed-Loop Flexible Wire Anode.	196
All-Welded Anode Assembly.	197
Bonding of Base Plate to Steel Slab.	199
Anode Between Membranes	201
Fuel-Cell-Type Spaced Porous Catalytic Anode Providing pH Control	204
Removable and Replaceable Dimensionally Stable Anodes.	207
Compressible Self-Guiding Electrode Assembly.	209
Connection Means for Anode Posts.	212
Cathodes.	214
Silver-Titanium Intermetallic Coating Formed In Situ.	214
Annealed Surface of Tungsten, Phosphorus, and Acicular Filaments of Cobalt Oxides	215
Nickel-Molybdenum Alloy Plated on Copper	217
Catalytically Active Raney Nickel.	217
Raney Nickel Powder Imbedded in Nickel Plating.	219
Polymer Film Laminated on One Surface of the Cathode.	219
Combined Cathode and Diaphragm Unit.	220
Cellular Metal Structure	223
Oxygen and Air Electrodes.	224
Pyrochlore Electrocatalyst	225
Intercalation Compound of Carbon and Fluorine	227
Oxygen Electrode Rejuvenation Methods.	228
Other.	230
Monopolar Filter Press Electrode	230
Electrolyzer with Released Gas.	231
Cathode Busbar Structure.	233
Protection of Catalytic Coatings	235
Intermittent Reversal of Cathode Polarity to Remove Deposits	237
PURIFICATION AND TREATMENT.	240
Brine Purification	240
Addition of Magnesium Followed by Magnesium Hydroxide Precipitation	240
Recycle of Precipitated Strontium Carbonate, Calcium Carbonate, and Magnesium Hydroxide	241
Removal of Heavy Metals by Adding Iron and Adjusting pH.	243
Alkaline Phosphate Precipitation.	245
Precipitation of Calcium and Sulfate Ions as Glauberite	246
Removal of Silica by Coprecipitation	247
Chelation.	249
Cation Exchange.	250
Dual Chelating Ion-Exchange Towers	252
Precipitation by Multistage Evaporation and Cooling	254
Utilization of High-Sulfate Salt Bodies	256
Removal of Chlorate from Recirculating Brine Stream.	258
Pretreatment with Sodium Hypochlorite Formed from Reaction Products	259
Product Purification and Concentration	260
Purification of Sodium Hydroxide at Low Cost	260
Ion Exchange	262
Elimination of Hypochlorite.	264
Removing Nitrogen Trichloride from Chlorine Gas.	264

Energy-Efficient Concentration of Caustic	268
Three-Unit Process for Concentrating Caustic	270
MEMBRANE CELLS	272
Process Design	273
Low-Calcium Brine and Periodically Reduced Current	273
Turbulence-Inducing Cathode	274
Energy-Saving Multistage Process	277
Three-Chamber Cell Utilizing Two Types of Membranes	279
Carbon Dioxide Injected into Catholyte Compartment	280
High Pressure Process	282
Higher Pressure in Cathode Chamber	283
Higher Pressure in Anode Chamber	284
Three-Chamber Cell with Membrane and Diaphragm	285
Filter Press Cell with Gas-Liquid Separator	287
Pressure-Activated Uniform Spacing	288
Electrode-Separator Combination Unit	290
Electrolyte Series Flow	292
Series Catholyte Flow	294
pH Control by Oxidation of Hydrogen	295
Cathodic Compartment Filled with Conducting Material	297
Bimetallic Electrodes Connected in Series	298
Support Structures and Sealing Means	300
Support Structure for Plural Cell Electrolyzer	300
Membrane Sealing Means	305
Membrane Materials	306
Polyamine-Modified Membranes	306
Heat Treatment of Polyamine-Modified Membranes	307
N-Monosubstituted Sulfonamido Groups in First of Two Layers	309
Thin Secondary Layer	310
Hydrophilic Membranes Formed by Reacting Fluoropolymers with Sulfur- or Phosphorous-Containing Compounds	311
Sulfonyl/Carboxylic Acid Copolymer Blends	312
Fluoropolymer with Pendant Carboxylic Acid Groups	313
Fluoropolymer with Pendant Carboxylic and/or Sulfonic Acid Groups	314
Fluoropolymer with Sulfonic Acid Groups plus Less Acidic Groups	315
Heat-Treated Copolymers of Tetrafluoroethylene and Sulfonylfluoride Perfluorovinyl Ether	316
Heat plus Diene-Derivative Treatment	318
Pretreating by Hydrolyzing and Stretching	319
Radiation-Grafted Films	321
Microporous Layer Joined to Membrane	322
Porous Layer on One or Both Surfaces of Membrane	323
Two-Layer Ceramic Membrane	324
Rejuvenation of Membranes	325
Treatment with Purified Brine	325
Treatment with Alkaline Brine	327
Acid Treatment	328
Conversion of Carboxylate Group to Acid or Ester	330
Cell Design Allowing for Easy Membrane Removal, Reactivation and Reuse	331
Periodic Change in Anode Polarity	332

MOLTEN SALT METHODS AND OTHER CHLORINE TECHNOLOGY . . .	335
Nonaqueous Electrolytic Methods.	335
Downs Cell	335
Cell with Solid Electrolyte Tubes Permeable to Selected Cations	337
Chlorine from Ammonium Chloride.	340
Oxidation of Magnesium Chloride.	342
Iron Chloride in Oxidation Furnace	343
Iron Chloride in Fluidized Bed Reactor.	344
Combination of Reduction and Oxidation Reactions to Recover Chlorine from Iron Oxide.	347
Oxidation of Ferric Chloride from Selective Chlorination of Titaniferous Material.	349
Oxidation of Halides in Conical Combustion Chambers	351
Chlorine from Hydrochloric Acid	352
Catalytic Electrodes Bonded to a Solid Polymer Electrolyte.	353
Catalytic Molten Salt Mixtures	354
Contacting with Molten Cuprous and Cupric Chlorides.	356
Cyanogen Chloride and Gaseous Chlorine.	358
Chlorine Recovery.	360
Recovery from Chemical Plant Waste Streams.	360
Recovery of Chlorine and Hydrogen Chloride from a Combustion Gas.	361
Phase Change Apparatus.	363
Absorption by Iron (II) Chloride.	365
Chlorine and Cyanuric Acid Values from Polychloroisocyanuric Acids.	367
Chlorine for Water Purification.	368
Membrane Cell for Electrolysis of Sodium Chloride	368
Water-Cooled Device for Generating Chlorine and Ozone.	369
On-Site Electrolytic Generation of Hypochlorite	370
Electrolytic Generation of Halogen Biocides.	371
Swimming Pool Chlorinator Requiring Minimal Attention	372
Caustic Chlorine Filter Bag.	374
Additional Processes.	374
Desalinization and Chemical Extraction	374
Solar Powered Gas Generation	375
Integrated System for Producing Chlorine Dioxide and Chlorine	376
Recovery of Acidic Gases	378
Electrowinning Metal from Chlorine Solution.	378
Liquid Chlorine Electrochemical System.	379
COMPANY INDEX.	382
INVENTOR INDEX	384
U.S. PATENT NUMBER INDEX	387
