

CONTENTS

Preface	7
Thermotechnical effect of air humidity on the lime-burning process	9
Effect of grinding on the structure of crystalline substances investigated by differential thermal analysis	17
Corundum refractories with alumina bond	29
Non-destructive ultrasonic testing of refractories	45
Process and equilibrium phase of grinding	61
Contributions to the theory of cement setting	77
On the chromium content of cements manufactured in the German Democratic Republic	85
Determination of the conditions in the sintering zone of rotary kilns	93
Factors influencing technology and properties of barium metatitanate base ceramic materials	101
Calculation of the temperature distribution in multicomponent glass-to-metal seals	109
Results of recent investigations in the field of seignette electric titanate composites	133
Application of a quartz screen in glass furnaces	145
Some aspects of silicate analysis	151
Recent experiences with plast concretes in the laboratory and practice	157
Potash balance of cement shaft kilns with special regard to possibilities of potash recovery	177
Separation and quantitative determination of montmorillonite in clays	191
Preliminary investigations on the preparation of uranium dioxide ceramics	199
Weathering of some alkali lime silicate glasses	207
Connection between hold temperature and hold time in glass annealing	215
Grain size distribution of crushed products	221
Ceramic chromatography	231
Heat phenomena occurring on wetting glass powders	245
Stable isotopes in silicate research	257
Polymorphic transformation of dicalcium silicate at low temperatures	263
Investigations of the crystalline solid-solution series forsterite-fayalite by infrared spectrography	273
Examination of surface layers on silicate glass	279
Contributions to the solid-phase kinetics of the reaction between AlF_3 and SiO_2	291
Investigation of the mechanical strength of porcelain	297
The formation of cement stone as a theoretical basis of modern concrete technology	315
Investigation of electron spin resonance in vanadium-containing glass	323
The lattice of $\text{K}_2\text{Pb}_2\text{Si}_2\text{O}_7$ and the structure of lead glass	329
Utilization of the flue dust of clinker-burning rotary kilns	337
Production of fosterite refractories from serpentinite	345
Semitechnical experiments in preparing and roasting refractory clay slate in a fluidization kiln	353

Gamma-ray investigations of concrete for density and reinforcement	361
The influence of different types of fines on the properties of set cement paste	371
Manufacture of high-density basic refractories	383
Experiments with carbonate-bound lightweight concretes	389
Ore cements from red mud: are they fit for use in the building industry?	399
Deviatographic examinations in the ceramic industry	409
The hydration of portland cement and clinker minerals investigated by thermal methods	425
Crystallization of glasses in the system $\text{SiO}_2\text{-Li}_2\text{O-Al}_2\text{O}_3$	437
Investigation of refractory linings of rotary kilns used for the Krupp-Renn process	445
Industrial quality control of stoppers and ladle bricks by means of ultrasonic methods	459
