

CONTENTS

1. Basic Phenomena in Sintering	1
2. Anisotropic Exaggerated Grain Growth and Sintering in $MnFe_2O_4$ and $Y_3Fe_5O_{12}$	21
3. X-ray Investigation of Glazes containing Zirconia	35
4. Reduction of Glazes containing Copper and Provision of the Reducing Atmosphere	51
5. Microcrystalline Active Corundum	63
6. A Survey of Ceramic Raw Materials	77
7. Die Untersuchung keramischer Rohstoffe	85
8. Application of the Electron Microscope to Ceramics	107
9. Acid Dissolution Techniques applied to the Determination of the Structure of Clay and Controlled by Physical Methods	121
10. A Study of the Plasticity of Mono-ionic Clays	139
11. The Common Clay Minerals as a Continuous Series	153
12. Der gegenwertige Stand der Forschung auf dem Gebiete der Textur von keramischen Werkstoffen und Erzeugnissen	167
13. Studies of Pore-size Distribution. II. Apparatus for the Measurement of Coarse Pores	187
14. Studies of Pore-size Distribution. III. The Effect of Firing Temperature	201
15. Basic Mechanisms leading to Fracture by Thermal Shock	223
16. Development of Ceramic Materials with a Dielectric Constant of 10,000 at Room, Temperature	239
17. Grain Size of Sintered Barium Titanate	255
18. The Technical Application of Soft Porcelains	265
19. Cordierite obtained from Sepiolite by Solid-state Reaction	277
20. The Formation of Mullite from Sericite and its Mixtures with Alumina and Kaolin	285
21. Uber die Kinetik der thermischen Calciumkarbonatzersetzung	295
22. Fluoride-based Ceramics	305
23. Some Physical Properties of Two-phase Crystal-Glass Solids	315
